Although it was so exacting, it was evident that these awkward, blundering fellows enjoyed their performance on the stage. They were eager to "go on" and huddled pell-mell from their tank to the centre of the stage. It was apparent, too, that they were just as glad when it was over, for they crowded in an indistinguishable heap at the exit. Perhaps the sight of the man with a bucket of fish had something to do with this.

## Pennsylvania Railroad's Winter Excursion Route Book.

In pursuance of its annual custom, the passenger department of the Pennsylvania Railroad Company has just issued an attractive and comprehensive book, descriptive of the leading winter resorts of the East and South, and giving the rates and various routes and combinations of routes of travel. Like all the publications of the Pennsylvania Railroad Company, this "Winter Excursion Book" is a model of typographical and clerical work. It is bound in a handsome and artistic cover in colors, and contains much valuable information for winter tourists and travelers in general. It can be had free of charge at the principal ticket offices of the Pennsylvania Railroad Company, or will be sent postpaid upon application to George W. Boyd, assistant general passenger agent, Broad Street station, Philadelphia.

# Schlitz BEER is Healthful

But a "green beer"—beer insufficiently aged, half-fermented—ferments on the stomach, causing biliousness and headaches.

Schlitz Beer is well aged.

There is beer that's not pure—not free from bacilli. It's not good for you.

But Schlitz Beer is pure.

None but the costliest materials go into Schlitz Beer—the best of barley, hops and yeast. A partner in our business selects them.

We spend more on cleanliness alone than the whole cost of brewing without it.

We cool Schlitz Beer in plate glass rooms, and filter all the air that touches it.

That's an extreme precaution.

We age it for months, at a temperature of 34 degrees, before we market it.

That's a heavy expense.

Then we filter the beer, then sterilize every bottle after it is sealed. Sterilized beer can't have germs in it.

Yet Schlitz Beer—brewed with all these precautions, that double the cost of the brewing—costs you no more than common beer, if you will ask for it.

Ask for the brewery bottling.

## A FREE EDUCATION

The Directors of the Correspondence Institute of America have decided to award a limited number of Tuition Contracts, in the following courses for home study:  
Illustrating, Calligraphy, Ad. Writing, Journalism, Proofreading, Stenography, Book Binding, Practical Electricity, and Electrical Engineering (including interior Wiring, Lighting, Electric Railways and Telephone and Telegraph Engineering).  
No Tuition Fee will be required until our Institution has estimated you are secured for you a position. For Free Tuition Contract, and mention the course which interests you.

PRESIDENT ROOSEVELT SIGNING HIS THANKSGIVING PROCLAMATION.

Copyright, 1902, by R. L. Dunn.

### THE PROCLAMATION.

According to the yearly custom of our people, it falls upon the President at this season to appoint a day of festival and thanksgiving to God.

Over a century and a quarter has passed since this country took its place among the nations of the earth, and during that time we have had on the whole more to be thankful for than has fallen to the lot of any other people. Generation after generation has grown to manhood and passed away. Each has had to bear its peculiar burdens, each to face its special crises, and each has known years of grim trial, when the country was menaced by malice, domestic or foreign levy, when the hand of the Lord was heavy upon it in drought or flood or pestilence, when in bodily distress and anguish of soul it paid the penalty of folly and a froward heart.

Nevertheless, decade by decade, we have struggled onward and upward; we now abundantly enjoy material well-being, and under the favor of the Most High we are striving earnestly to achieve moral and spiritual uplifting. The year that has just closed has been one of peace and of overflowing plenty. Rarely has any people enjoyed greater prosperity than we are now enjoying. For this we render heartfelt and solemn thanks to the Giver of Good, and we seek to praise Him not by

words only but by deeds, by the way in which we do our duty to ourselves and to our fellow-men.

Now, therefore, I, Theodore Roosevelt, President of the United States, do hereby designate as a day of general thanksgiving Thursday, the twenty-seventh day of the coming November, and do recommend that throughout the land the people cease from their ordinary occupations, and in their several homes and places of worship render thanks unto Almighty God for the manifold blessings of the past year.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this 29th day of October, in the year of our Lord one thousand nine hundred and two and of the independence of the United States the one hundred and twenty-seventh.

By the President,

JOHN HAY, Secretary of State.

THEODORE ROOSEVELT.

## Are We a Grateful People?

IT IS one of the curious and unhappy traits in human nature that leads men to be least thankful when they have the best and greatest reasons for being so. Seasons of peace and prosperity among a people are the very times when selfishness and extravagance, heartlessness, injustice, and the still grosser vices and the crimes springing out of luxury and idleness, attain their most noxious growth. Some of the saddest and darkest chapters in human history are those recounting this fact. It was so with the ancient Jewish commonwealth, and thus also with the Roman empire.

In brief, so generally has it been the rule that national degeneracy, decay, and ruin have followed close upon the footsteps of great national prosperity that the thoughtful historian may well regard it almost as a fixed principle in the philosophy of human events, while to the student of current history—the genuine lover of his country—such a period of material wealth and national advancement as we now enjoy may well give rise to grave apprehensions of coming evil and general decadence. The United States at the present time is undoubtedly in the full tide of the proudest, happiest, and most prosperous period in all its history. This may be truly said in spite of various untoward events of recent occurrence, such as the so-called meat famine, the long and disastrous coal strike, and also in spite of the alleged and imminent perils to our industrial peace arising from the rapid increase of great combinations of capital.

Notwithstanding these real or imagined shadows across our national pathway, it is a fact that the American people, as a whole, were never in the enjoyment of so many material blessings as they are at the present time, and had never, therefore, so many reasons for profound gratitude and thankfulness to the Father of all good and the Ruler of nations as they have to-day. Unprecedented crops of wheat, corn, and other staples, together with a ready market and good prices, have brought a larger measure of solid benefits to our farming population than they have ever known before, and in these benefits all the country shares to a greater or less degree. And the passing year has seen also a marked and notable increase in the output of our iron, copper, and gold mines, in the volume of some exports, and the growth of our manufacturing industries, especially in the South, where industrial development is needed most. Neither war, pestilence, nor famine has invaded our borders, and no great calamities of any sort have occurred to darken the chronicle of the year.

Must we then, as we stand under this smiling sky and in the midst of our bountiful harvests, our busy factories, and thriving marts of trade, be forced to the melancholy conclusion that this happy condition is a precursor of calamity; that it portends the near approach of a period of weakness, misery, and national decline? Will the philosophical principle of which we have spoken again hold true and history repeat itself in our case? We are optimistic enough to hope and believe that it will not; that we, as a people, have gathered wisdom from the experiences of the past; that we will not be so vain and foolish, so rash and blind, so neglectful of the true sources of our happiness and strength, as to permit selfish ease, wanton extravagance, and unbridled luxury to turn our prosperity into a curse and make what should be the pathway to still higher and more enduring good a broad road to national degradation and shameful disaster.

Yet our faith in the inherent virtue and robust sense of the American people is not so great as to blind us to the dangers of the situation or to make us realize less keenly than before the necessity of safeguarding ourselves at every possible point from a recurrence of the evils attendant upon a wide distribution of wealth and its luxuries and the deadly vices which ease and idleness have ever been wont to breed. Because of the perils which lie this way we may be specially thankful that we have a Thanksgiving Day, that we have a national custom whereby our President joins with the Governors of our States in a solemn proclamation setting aside a specified day for the single purpose of "giving thanks to Almighty God for the blessings He has bestowed upon us as a nation and a people."

Of all times in our history it is well just now that we should be thus directly reminded by the voice of official authority of the true source of our prosperity and the obligations we are under to render a just and heartfelt

tribute of praise and gratitude to Him to whom we owe it all. If this observance is not purely perfunctory; if it leads us, as it should, to a deeper and more abiding sense of the value and necessity of pure, honest, and righteous living as the basis for true national greatness, then, indeed, may we regard our present prosperity not as a precursor of evil but only as the beginning of still better and happier things in the days to come.

## Peace in Delaware.

THE STATEMENT that President Roosevelt, in appointing Mr. William M. Byrne as United States District Attorney for Delaware, signifies that hereafter he will recognize the Addicks Republicans in that State, ought not to be surprising. Last summer the President, at Oyster Bay, warmly criticized the factional Republicans of Texas, and gave out that hereafter he proposed to recognize Republicans who fought for the party rather than for personal success. No one disputes the fact that the redemption of Delaware from Democratic control has been mainly brought about by the persistent efforts of Mr. Addicks. At the recent election the Addicks Republicans, it is estimated, polled fifty per cent. more votes than the opposing faction, known as the "regulars." Had both factions united on the candidate for Congress, he would have been elected, and his defeat, therefore, is to be charged as much, if not more, to the regulars than to the Addicks Republicans. Delaware, having no Republican Congressman, the President, following his custom, will advise, regarding appointments, with the national committee man from the State, Mr. Addicks.

That the Republicans have control of the Delaware Legislature this year is due in a great measure to the efforts of Mr. Addicks, and it does not detract from the merits of the case to say that he had a selfish view in mind because of his candidacy for the United States Senate. But for factional quarrels, Delaware would be represented in the United States Senate at present by two Republicans. We are glad that President Roosevelt has finally reached the conclusion that Delaware shall have the two Republican Senators to which it is entitled, and to whose support he has a right to look in his determined efforts to secure legislation for the public good. All sorts of accusations have been made by Republican opponents against Mr. Addicks, most of them the echoes of the assaults of his Democratic enemies, who have never forgiven him for taking the State from their control. Nothing has been said against him that has not been said against nearly every other Republican who has made a successful fight for leadership in any State.

The Republicans of Delaware would be better off if they would cease recriminations against each other and unite to secure the legitimate fruits of the victory they have won. Mr. Addicks cannot be blamed for believing that he should share in the fruits of this victory, and his ambition to seek a seat in the Senate, therefore, has both justification and precedent to support it. President Roosevelt proposes to have peace in Delaware, even if he has to fight for it. And he will get it.

## How to Expand Our Trade.

THE ARGUMENT in favor of a wise, liberal, and enlightened policy toward our foreign carrying trade was put in a forcible and convincing way by Secretary Shaw in a recent speech in Detroit. Mr. Shaw said very truly that the greatest public question before the American people to-day is a foreign market for our products. We have the corn, the wheat, the cotton, the beef, the products of our fields, factories, and workshops, sufficient in volume to supply the markets of the world; the only thing we lack to reach and hold these markets is the ships. These we can secure best, as Germany, France, and other foreign nations have secured them, by liberal grants, under proper conditions, to our shipping interests.

Secretary Shaw made a special plea for such aid from Congress as would enable us to obtain our rightful share of the South American trade. He pointed out the humiliating fact that we have no regular steamship communication with any of the countries lying south of the Caribbean Sea, and that, chiefly because of this, only ten per cent. of the \$120,000,000 of goods annually imported into Argentina comes from the United States, and that we sell about the same proportion of the \$100,000,000 imported by Brazil, and other South American countries in like ratio. Our exports to these countries, such as they are, nearly all go in foreign bottoms. Of the \$2,000,000 we exported to Uruguay only \$100,000 went under our flag. In support of a government subsidy in this particular direction, Secretary Shaw said:

"It is idle to suppose that steamship lines will be established to those ports without government aid. There is little freight now to carry, and no inducement, and a steamship line would perish before a sufficient trade could be built up to make it profitable. It took long years to establish sufficient transcontinental commerce to make our Pacific lines of railroad profitable. It will take perhaps longer still to make steamship lines to those ports, far to the southward, profitable, and in my opinion, any ship-subsidy bill that will meet the approval of both houses of Congress will contain special provisions for these new lines, and at rates far in excess of what is necessary to induce competition with European lines in transatlantic commerce."

It ought to need no argument to persuade thinking and intelligent men that the state of affairs thus depicted is not only humiliating to our national pride, but utterly unjust to American interests. As matters stand, when our manufacturers desire to venture in the South American markets they must reach that point by steamship lines via Europe, or by the slow and expensive method

of sailing vessels or chartered tramp steamers. Here lies a large and growing market for our manufactured products at our very doors, which we are debarred from simply because, under the present conditions of American shipping, we cannot compete with England, France, and Germany in the carrying trade. The one and only way to end this unhappy situation is to pass a subsidy bill that shall encourage and justify our ship-builders and steamship companies in establishing the necessary communication with South American ports. Let every workman, as well as every businessman, fairly and carefully consider these unanswerable arguments for the protection and enlargement of American industries.

## The Plain Truth.

THE RESULT of the election in the State of New York may ultimately be felt in the politics of the nation. Western politicians are intimating that New York is no longer the pivotal State, but they overlook the fact that the political pendulum is swinging more strongly toward the Democratic party. They forget that the South, in 1904, will be substantially solid for the Democratic ticket. They fail to perceive that the obliteration of the Populist planks of the last Democratic national platform is becoming the rule in every State, and that the calm and convincing leadership of William McKinley no longer safeguards the interests of the Republican party. New York will not only be a great factor in 1904; it will be the greatest. Here will be the battle-ground of the contending armies, and many predict that, casting nearly a tenth of the electoral vote, New York will be the prize-winner.

THE WEALTHY woman who died in New York recently and left a will bequeathing generous sums of money to her cook, her butler, and several other working people who had served her long and faithfully, set an example in the disposal of riches worthy of general emulation by other possessors of fortunes. The leaving of little mementos and many good wishes in such cases have been common enough, but substantial sums of money are far better, especially when they fall into the hands of persons who have become aged or, perhaps, incapacitated for earning a livelihood elsewhere by reason of previous long and hard service for the testators. It is not enough, in every case, to say that such persons have received generous wages and good treatment during the period of service. That may be true, but there are some kinds of services, which are not fully compensated in this way and a recognition of this fact in a bequest or in some other form is an act which should always be in order among men who wish to deal kindly as well as justly with their fellows.

WHILE WE are as ardent believers in the strenuous life as any rational being should be, and have nothing but approval for all manly and healthful forms of outdoor sport, we do not find anything in these feelings and beliefs to justify us in indorsing and encouraging a game conducted after the fashion of up-to-date football, a so-called pastime which was responsible within a single week, recently, for the death of five young men and the serious injury of an uncounted number of others. These were college students, too, all, therefore, presumably young men of high character and intelligence, and thus a greater loss to the world than some young men would be. When the rage for risk takes off, as it has done in numerous instances, the reckless Alpine climber, the venturesome automobilist, or the foolhardy performer in the show-ring, we can afford to regard these casualties with more complacency than we can these sacrifices of young and valuable lives taking place under the auspices and almost within the shadow of our college walls. If a decent regard for and a just estimate of the value of human life and limb are not among the things taught in these institutions, where, then, shall such teaching be found? Will it be necessary for some new St. Justus, some holy and venerable man, to sacrifice his life on the football field in order to make an end at once and for all time of these bloody and brutal exhibitions as the gladiatorial shows of old times were ended?

THERE NEVER has been a doubt in the mind of any well-informed Republican of New York State that if the Hon. Thomas C. Platt desired, at the close of his term, to be sent back to his seat in the Senate, his wish would be gratified. So generally was this understood and conceded that when members of the Legislature were nominated, their selection involved no reference to the Senatorship, for but one name was in the minds of all. The fact that Senator Platt has decided to accept a re-election this winter is, therefore, not in the nature of a surprise. The abortive effort to arouse a show of opposition to his return counted for nothing. The hope of its backers was in the support of Governor Odell, but the Governor, at the first opportunity, took pains to indicate, in his customary frank, straightforward, and honest way, that he was not a candidate for the Senatorship, nor for any other place, for two years to come; that he was in favor of Senator Platt's re-election, and had no doubt that the Republican members of the Legislature would unanimously tender to him the office for a second term. It has been said that Senator Platt is not a great orator, but it has been a peculiarity of all the best Republican leaders of New York State, with possibly the exception of Roscoe Conkling, that they have been thinkers and workers, rather than speakers. Even the political enemies of Senator Platt concede that, as a successful party worker and leader, he stands without a rival, in years of service and in the record of achievements.

## PEOPLE TALKED ABOUT

AMONG THE host of capable men who have contributed largely to the industrial progress of the United States none is more

MIL JOHN FRITZ,  
Eminent American ironmaster and  
inventor who rose from machine-  
shop boy to millionaire.—Eggert.

worthy of honor than Mr. John Fritz, the ironmaster and inventor, of Bethlehem, Penn. In recognition of his eminent services in developing the country's resources, Mr. Fritz's eightieth birthday was celebrated recently at the Waldorf-Astoria, in this city, by a banquet attended by five hundred persons, including many of our foremost iron and steel manufacturers. The guest was presented with a magnificent album containing the pictures and autographs of nearly five hundred men prominent in the steel industry, and with a loving cup by Mr. Irving Scott, the San Francisco steel manufacturer.

He also received the first "John Fritz gold medal," given for his achievements in industrial science, and which is hereafter to be awarded annually to the person who adds most to the world's industrial advancement. The medal was instituted by the four leading engineering societies of the United States. Mr. Fritz's career has been a typical American one. Born in poverty, receiving but little school education, and going to work when a mere lad in a machine shop, he finally rose through industry and ability to the head of great enterprises, success, and wealth. His more notable achievements include the construction of plants which developed respectively into the works of the great Cambria and Bethlehem steel companies, and the designing and building of the plant needed for creating an American navy. Mr. Fritz is known throughout the world of iron and steel, and is widely esteemed for his attractive personal traits. He is still hale and vigorous, and active in business.

FEW GREAT preachers of the day have a more dramatic and impressive manner in the pulpit than the venerable Dr. George Lorimer, now pastor of the Madison Avenue Baptist Church, of New York, although he is far removed from being a sensationalist. He speaks entirely without notes, and when warmed up to his subject often strides rapidly to and fro across the pulpit platform, emphasizing his points with vigorous but graceful gesticulation, and speaking in a voice that penetrates to the uttermost parts of the edifice. As a pulpit orator uniting eloquence and earnestness in a remarkable degree Dr. Lorimer has rarely been equalled.

THE RUSSIAN press censorship has forbidden the publication of the contents of the signals exchanged as farewell greetings between the German imperial yacht *Hohenzollern* and the Russian *Standart*, on the occasion of the recent meeting between the Czar and the Kaiser. It has now been ascertained that the Kaiser's signal ran thus: "The lord of the Western seas sends a farewell greeting to the lord of the Eastern seas." The Czar, in schoolgirl style, replied "Eternal friendship." It is not easy to see where the danger could come in from giving publicity to these high-flown compliments, but since the Russian censor has laid them under ban there must be something wrong, of course, from his point of view.

IT IS said, to the credit of the three young men now at the head of three great nations of the world, the United States, Germany, and Russia, that they are men whose personal character and private life are above reproach, that they are men of strong domestic tastes, faithful and devoted husbands and fathers. All have large families of young children, the largest being that of Emperor William of Germany. He has seven children, the six oldest being boys and the youngest a daughter, the Princess Victoria Louisa.

PRINCESS VICTORIA LOUISA,  
The German Emperor's only daughter.

Princess Victoria Louisa, who was born on September 13th, 1892, and is therefore ten years old. The princess, it is said, closely resembles her mother, so far as her form and features are concerned, but possesses certain of her father's characteristics in her mental make-up. She has a somewhat impetuous temper,

but is remarkably bright, vigorous, and quick to learn. Both the Emperor and the Empress of Germany have advanced ideas in regard to the education of women, and are giving their daughter the best education that the times afford.

AMONG THE Englishmen who have recently come to the United States to study our institutions, our social, industrial, and economic conditions, are Mr. G. H. Ferris, a well-known London journalist, formerly of the staff of the *Speaker*, and editor, among other things, of *Concord*, the organ of the International Peace and Arbitration Society, and Mr. John H. Hobson, a well-known writer and lecturer on economics. Both of these gentlemen are also prominent in the anti-imperialistic movement in Great Britain, it being their view that English colonial experiments have been, on the whole, a disastrous failure.

AN EVENT of especial interest in educational circles was the recent inauguration of Dr. Frank Strong as

DR. FRANK STRONG,  
The newly-inaugurated chancellor of  
the University of Kansas.—Shelley.

chancellor of the University of Kansas, at Lawrence. Among great numbers of invited guests were delegates from over forty of the higher educational institutions of the country. There were eight or ten university presidents, including the presidents of Yale, Leland Stanford, Chicago University, the University of Missouri, and the University of Nebraska. Three days were given up to the inaugural ceremonies. Perhaps the leading address was that made by President Hadley, of Yale. Dr. Strong, a native of Auburn, N.Y., was graduated with high honors from Yale, and subsequently rendered that institution professional services. Dr. Strong has had wide experience as an educational executive. He was principal of the high school in St. Joseph, Mo., superintendent of schools in Lincoln, Neb., and chancellor of the University of Oregon. He is about forty years of age, six feet four inches in height, and is in every way qualified to render most vigorous and effective service to the splendid institution of which he has taken charge. The University of Kansas is a comparatively young institution, but it is in possession of fine facilities and its student body has always been remarkably earnest and intelligent. The institution now has about fifteen hundred students and is making rapid gains in every direction. The State of Kansas has always given it liberal support.

OUT OF the few who read the excellent consular reports sent to our State Department from Vladivostok, Russia, now the eastern seaport of the great Trans-Siberian railroad, fewer still probably are aware that the consul who sends them, Mr. Richard T. Greener, is a colored man. Mr. Greener enjoys the distinction of being the first colored graduate of Harvard College, and afterward served for a time as professor of metaphysics and logic in the University of South Carolina, and later still was a member of the faculty of Harvard University. He was admitted to the Bar in Washington in 1877 and came to New York in 1885, where he was appointed an examiner on the municipal service board in the days of Mayor Grace. Professor Greener was appointed consul at Vladivostok in 1898 and has made an excellent record as a faithful and competent official.

THE RE-ELECTION of Governor Robert Marion La Follette, the Republican chief executive of Wisconsin,

will deservedly continue in office a man of great ability, firm convictions, and faithfulness to the public weal. Mr. La Follette was first chosen to his present position in 1900, by a plurality of 103,745, receiving more than 50 per cent. of all votes cast for gubernatorial candidates, and despite considerable opposition within his own party he carried the State by about 50,000 plurality this year. The Governor's hold on the people in general is strong because of his determined stand for equal and fair taxation and his successful efforts to secure the passage of a law requiring the nomination of all candidates by direct vote at primary elections. He was nominated for Governor both times under this statute, whose workings have greatly satisfied the voters of Wisconsin. The Governor's success is largely due to his thorough understanding of the best popular sentiment. He is a man of the people, having been born in a log cabin in Wisconsin forty-seven years ago, and having spent his early years in lowly surroundings. He was aspiring, however, and managed to obtain a good education and was admitted to the Bar in 1880. That very year he was elected district attorney of Dane County, and was re-

ROBERT MARION LA FOLLETTE,  
Who rose from a log cabin to the Governorship of Wisconsin.—Curtiss.

elected two years later. After that he was given at terms in Congress, serving in his last term on the Ways and Means Committee and framing several schedules of McKinley tariff law. He was defeated in 1890 and practiced law for ten years before he was again summoned to the service of the people.

NO CHURCH edifice within the limits of New York is so rich in rare memories and noble associations

as the historic past, none has stood for so much in the religious and philanthropic life of the metropolis as Old Trinity. From its place among the time-stained tombs in the old churchyard on lower Broadway, looking down on Wall Street, the realm of the money kings of America, and in the very centre of the rush and roar of the busiest city in the modern world, this venerable building stands, with its lofty spire, its shadowy aisles, its chiming bells, as a perpetual reminder to the restless, hurrying throngs below, that

MORGAN DIX, D.C.L., D.D.,  
Who has just celebrated his fortieth  
year as rector of Old Trinity,  
New York.  
Copyright, 1902, by Rockwood.

"It is not all of life to live,  
Nor all of death to die."

It is surely a signal honor for any man to be the chief occupant of a pulpit like that of Trinity, and that for full forty years in the life of a city like New York, for such eventful, crowded, expansive, wonderful years this old church has looked down upon, and in which it played a conspicuous and a noble part. But such is the distinction that belongs to the present rector of Trinity, Dr. Morgan Dix. Fifty years ago, then a young man twenty-five, he began his ministry, three years later came connected with Trinity parish, and seven years after that, in 1862, in the days when his father, General Jo A. Dix, was gaining fame as the great war Governor of New York, he became rector of Trinity, and there he has remained to this day. What a power this church has come to be in all these years may be judged somewhat from the fact that it takes nearly two full pages of the "New York Charities Directory" simply to give the titles, locations, and objects—the latter in briefest outline—of the guilds, chapels, schools, societies, relief bureaus, and other agencies for good connected with this parish, most of the auxiliaries having been developed and added during Dr. Dix's rectorship. Not only as a preacher and an organizer does Dr. Dix rank high, but his influence has been widely extended by many books from his pen, including two-volume history of Trinity itself. Considering the magnitude of his noble career, his splendid achievements, it is not surprising that the recent fortieth anniversary of his rectorship and the golden jubilee of his ministry should have been marked by testimonials of a rare and notable kind, among these being the gift of a sterling-silver loving cup from the clergy and congregation of St. Paul's Chapel, Trinity's oldest and largest auxiliary society. The cup is a fine piece of repoussé and etched work by Tiffany.

TWO LITTLE schoolboys in Holland recently sent Queen Wilhelmina a quaint little letter, which translated, reads: "Dear Queen—Do, please, say to our teacher is not to be sent away. She is so good to us and we love her so much, and really she hasn't done anything. Father says you are powerful and good, and that you even pardon murderers, because you wish to see people to become good again." Queen Wilhelmina sent a reply promising that the case of the teacher threatened with dismissal should be investigated.

THERE IS probably no other country in the world and certainly not in Europe, where women pro-

port in society devote so much time to outdoor sports and are so expert in many of them as in Ireland. And of all these recreations the favorite one with Irish ladies seems to be hunting with hounds; and it is said to be an exception to meet a girl or matron in Ireland who does not excel in horsemanship. It is therefore something to claim, as is claimed of Mrs. Love, whose portrait we give herewith, that she is one of the best sportswomen and riders in the Emerald Isle. Like all really good riders Mrs. Love wears the simplest and plainest of riding habit and looks with disfavor upon some of the showy innovations proposed in this direction.

MRS. LOVE,  
A leader in Irish society and a keen sportswoman.

# The Rescue of New York's Foundlings

By John Mathews

**D**ARKNESS IN the narrow hallway; the sickening odor of the tenements; a woman stumbling along, her hands outstretched; the small, weak, pathetic cry of the very little child; a bundle in the corner which the woman lifts into her arms; the flutter of excitement in the tenement, and the crowding in of neighbors; a policeman arrives; and the baby, a foundling, is taken to Bellevue hospital. Then a blank like this is filled out:

No. 30. Police Department of the City of New York. Precinct. . . . . Lost Children. . . . .  
September 23, 1902.  
Foundling Name—unknown. Brown hair, blue eyes, white cotton undershirt, white cotton flannel petticoat.  
Age—One month.  
Sex—Male.  
Found by whom—C. Collins.  
When—9 P. M.  
Where—In hallway, . . . . East Sixty-eighth Street.  
JAMES LYNCH, Sergeant.

And such is the beginning of two hundred and fifty lives in the great city of New York every year.

When the little child, most helpless of all living things, lifts its tiny arms in appeal the answer is spontaneous. Whether you are man or woman you do not hesitate; your hand at once would give the little suppliant a gentle caress; your voice assumes a tone of soothing; the spirit of protecting kindness has entered into you. It is this same spirit which is saving the lives, every year, of these two hundred and fifty foundling babies, who, until recently, for the very want of it, died. It is the balm of the mother's kiss and the cradle of a mother's arms that give health and growth and happiness to New York's little foundlings; and the system by which this beautiful work of mercy is done is one of the most unique and interesting in the metropolis.

For these, its very youngest charges, the city had made provision in the usual way. On Randall's Island was a home and hospital supplied with good equipment, provided with competent nurses, and furnished with long rows of little white beds, with all the regularity and order of a properly conducted public institution. Into this place the city's babies were taken. Some of them when found were only a few hours old, others had been kept for some weeks by their frightened unfortunate mothers before they were secretly left where some one else would have to provide for them. No matter what their age or condition, the foundlings were forwarded to Randall's Island, beginning their lives as infant paupers in one of the small iron beds of the long wards of the institution.

When one of them was sick with some specific affliction it was ministered to in the regular way. When it was only lonesome it was left alone in its white crib, crying; and it lay there helpless during the long days, wailing softly and monotonously, its instinct calling for the mother which it had lost, until the little face grew small and thin and the eyes grew big; then the voice was hushed at last, and another little body went to the potter's field. For years the city carried out this system. Ninety-nine per cent. of the foundlings died on Randall's Island.

"Well, the little fellows are better off dead," the attendants would say; "they wouldn't have much to look forward to, any way."

And so year after year the motherless babies in the long rows of white cribs were not even encouraged to live. Then their cries reached the hearts of some charitable women, and four years ago the institution which now gives mothers and homes to these most pitifully unfortunate little ones came into existence. It supplied that which the hospital could not give, the comforting and fondling and the little attentions, as well as the food and love of the mother—in a word, the "mothering," as it is all summed up by those who have made the new system so successful. It is this "mothering" that has reduced the death rate among the foundlings of New York from 99 to a per cent. lower than that among all the other children of the city—a remarkable fact when one considers the conditions under which these foundlings begin their journey through the world, the lack of care and the exposure to which they are subjected at the outset.

In the new method of saving the lives of the little foundlings the city co-operates with two charitable organizations. These are the State Charities Aid Association, a Protestant institution, and the Guild of the Infant Saviour, Roman Catholic. A child found is taken at once to Bellevue Hospital, and lodged in the children's ward. Every morning Miss Walker, superintendent of the work for the State Charities Aid Association, and Miss McIntyre, superintendent of the Guild of the Infant Saviour, call at the hospital for foundlings. The children are taken away in turns by these young women—Miss Walker has possession of the first and the next is taken by Miss McIntyre. There are usually about four foundlings a week. The system in both cases is the same. Each child is carried away in the superintendent's arms the morning after it is found, so that no foundling remains in Bellevue as long as twenty-four hours.

It is first baptized in the hospital ward—those in charge of Miss Walker are christened by the Protestant clergyman at the hospital and those which are cared for by Miss McIntyre receive the baptism from a Roman Catholic

priest whose parish includes Bellevue. So that half of the little ones which are found are made Protestants and half Catholics, no matter what their race or color, unless there is some indication of an expressed preference by some one who had a right to decide. Such indication is, however, almost unknown. Whether or not the child is to be reared in a Protestant or a Roman Catholic home becomes purely a matter of chance. And all the foundlings of New York are baptized in one of the two branches of the Christian Church. This fact has led to some peculiar situations. Among the foundling children there are those of Hebrew parentage, but these, too, like all the rest are baptized either Protestant or Catholic.

Not long ago there was a protest from a Hebrew mother whose child, neglected by those in whose charge it was placed, was carried to Bellevue as a foundling and baptized in the Roman Catholic Church. When she learned of this the shock against the strong religious faith of the mother was so great that she fainted. The woman, herself sick, was unable to care for her child and it has remained in the care of the Guild of the Infant Saviour. Although the baptism is the first step of the foundling in its new path, the human and not the religious feeling is supreme in its rearing. Those whose lives are devoted to the work which unfortunate mothers, through want or shame—or through

superintendent who has placed it there. If the child is sick the foster-mother calls a doctor employed by the State Charities Aid Association or the Guild of the Infant Saviour, whichever may be the sponsor for the infant. When the little foundling's period of nursing is ended there is usually a pathetic scene in the Italian home. The foster-mother has learned to love the little "bambino" for whom she has cared, a love the strength of which she does not appreciate until the parting. Italian mothers with half a dozen children of their own and depending sometimes on the wages of a day laborer for support plead fervently to be permitted to keep the child as their own, but the plea must be refused, and the system moves on. These first homes of the foundlings are far up town or in the suburbs, where there are free air and green grass. In the second home the foundlings are no longer nursed, but are fed as befits children of their age, and those who care for them receive the same pay from the city as the foster-mothers, \$2.50 a week.

Only the persons who are engaged in the work of finding homes for children appreciate the number of childless homes in America. There are more of those who would adopt children than there are children to be adopted. And none of New York's foundlings in good health has reached the age of two years before it has been placed in a permanent home, and the child cannot be legally adopted then until it has been in this home a year, so that the new parents before they bind themselves by law will fully appreciate the responsibility which they have assumed. These families are investigated, too, as to their character and circumstances before they are permitted to adopt any child. Neither of these societies wishes to put a child into the bondage which has sometimes been the lot of unfortunate children.

Of the children who are abandoned by their mothers there are more boys than girls. Perhaps there is a feeling in her who abandons the helpless little one that the boy can "shift for himself" better in the great world than the girl. Perhaps the unfortunate mother has learned this by her own experience. But the greatest demand for children to be adopted is for girls. The desire for the child comes from the mother, and she wants a daughter who will grow up and become a companion to her. And those who come to adopt the foundling children are usually very precise in their demands.

The child, they say, must have blue eyes and curly, golden hair and be old enough to talk—at the age, in other words, which is called "interesting." But all foundlings are not blue of eye and golden of hair. There are some little black-eyed strangers among them, and when the woman who would adopt a child visits the office of the superintendent the little black-eyed child, perhaps, is put in her arms, and perhaps the baby puts its little hand softly against the woman's cheek or neck, and she usually says at once:

"This one will do very well for me."

"People very often ask me," said Miss Walker, superintendent of the care of foundlings for the Charitable Aid Association, "if it is not a dangerous thing to take into the home one of these foundling children, about whose parents nothing is known or will ever be learned. The question cannot be answered from the experience of our own society, but a medical inspector who followed for twenty years the careers of foundlings who had been boarded out and adopted in Massachusetts has said that the foundlings compare favorably when they reach their growth with the children among whom they live, that there is no greater tendency apparent among them toward vice or crime. After all, the parents of these foundlings are the unfortunate and not the vicious ones."

These two hundred and fifty little charges of New York are found in the greatest variety of places. One day some boys playing in a vacant lot saw a tall young woman hide a basket down in some weeds which grew there, and then hurry away. The curiosity of the children led them to the basket, and they found that its cover was strapped down and that two round holes had been cut in the straw at each end of the basket. They lifted the lid and disclosed a baby only a few days old. In great excitement the little boys ran to find a policeman. The baby was clothed in fine garments. It was carried to Bellevue Hospital and there baptized and put in care of the foundling society. Nothing more of its parents was ever known. They were, perhaps, well-to-do, and peculiarly considerate, too, for the holes which had been cut in the basket were there so that the baby should not suffer for breath.

Most of the foundlings are left in hallways of the tenements. One was found lying in a pool of water in a vacant basement; another was left on an elevated station; another was left in a hansom cab; a policeman found a little girl in Central Park; one was in an ash barrel; one on a Jersey ferry-boat; another was in a church; another on the front stairway of a home in a fashionable street. In Brooklyn is a theatre where mothers may check their children at a nursery at the play-house entrance while they go inside and enjoy the performance. A baby was checked at this theatre once for which no one ever called. And these foundlings grow to manhood and

Continued on page 525.

A LITTLE FOUNDLING AND ITS GOOD FOSTER-MOTHER.  
Lucky.

perhaps—neglect are touched by the sight of the frail bit of flesh struggling for life; they hear the pitiful pleading of the little voice; and the tiny hands and feet, the soft eyes, the little body all speak in irresistible argument. The religious ceremony is a formality to be quickly disposed of, so that the real personal care of the child may begin. The baptism takes place always in the infants' reception ward. The minister or the priest is called; the water is dropped on the baby's head, and then it is bundled up and carried out in the nurse's arms. It is given always a good American name. In the Randall's Island days the young men exhausted their ideas of humor in naming the foundlings. If one came in on a hot day, it might be called "Virginia Broiler," or "Mary Healer"; another name was "Rebecca Streets" for one picked up on the pavement. But this element of cruel frivolity is no longer permitted in the work.

The foundling, when it is taken from the hospital goes at once to a mother who has just lost her own child. It finds its place in arms made empty by death. The tender love of the mother flows again, wrapping in its softness and warmth the lonely little foundling. The foster-parent takes the new infant to her breast and cares for it as her own.

For this she is paid from \$10 to \$12 a month until the child is old enough to be weaned. Then it is taken into another home, where it is fed by another mother until it is ready for adoption. The great majority of foster-mothers are Italian. One reason for this is the high mortality among their own infants at birth, brought about by a prejudice which exists among the ignorant of this nationality against the presence of a doctor at such times. There is a health and physical vigor and a warmth of nature in the Italian mother that make her a most desirable foster-parent. The foundling becomes one of her family, and its place is assured because it contributes in a substantial way to the family's support.

While the little one is in the care of its temporary mother it is visited once a week, sometimes oftener, by the

FATTENING PEN, WHERE DUCKS GORGE THEMSELVES AND BECOME PLUMP.—Phelan.

CACKLING PROCESSION OF "QUACKS" SURGING OUT OF BROODING HOUSE.—Phelan.

## Our Biggest Duck Farm

By Harry Coburn Goodwin.

"I AM VERY partial toward roast duck for a Thanksgiving dinner," the late Roswell P. Flower, ex-Governor of New York, once remarked. Governor Flower might have had this thought in mind when, in 1896, he established the Jefferson County Duck Farm, near Watertown, N. Y. The farm has grown into one of the largest of its kind in the State, and every one of the 30,000 ducks annually raised and shipped to city markets brings a premium of two to three cents per pound. To those who delight in a tender roast of duck for a Thanksgiving feast the life's story of their favorite fowl must be interesting.

R. A. Tuttle, superintendent of the Flower farm, selects from the day's gathering a medium-sized, hard-shelled egg of perfect contour. The egg is washed and placed within the incubator, where the thermometer registers 103 degrees. After being subjected to this heat for five days the egg is tested by an expert. If found to be fertile it is left five days longer, when it is again tested. This time, if the embryo shows signs of life, the egg is returned to the incubator, where it is left for eighteen days more, making the total period of incubation twenty-eight days. On the last day a slight picking sound is heard. The shell cracks open. A little bundle of yellow down is seen to wriggle from its prison. The newly hatched duckling is placed in the "Nursery Brooder," where, by means of a hot-water system, a temperature ranging from seventy-five to ninety degrees is always

maintained. The duckling remains in this building for five days and its sustenance consists of stale bread soaked in warm milk.

From the nursery the little orphan is transferred to Brooder House No. 2, where the temperature is seventy degrees. During its five days' residence here corn meal and bran are added to its diet. On the tenth day the now rapidly growing fowl is placed in Brooder House No. 3 and its diet increased by the addition of green cut clover, corn, gluten, and beef scraps. In this building a temperature of sixty degrees is maintained. The next step in the journey is the "Cold Brooder," or House No. 4. By this time the duckling has become a lusty youngster. Here it remains for five weeks, at the end of which it is taken to House No. 5, where it is permitted to take the first plunge in the brook.

After leaving the No. 5 the young duck is taken to the "fattening pen," where, with hundreds of others, it is crowded into a small space to prevent over-exercising. In the fattening pen the feed consists of white flour mixed with gluten, corn meal, and beef scraps. At the end of the twelfth week the superintendent takes the fat-laden bird by the neck and carries it to the "killing house." Here the unfortunate fowl is suspended by the legs from a long pole, a weight is fastened into its bill to keep the head from swinging, a sharp knife is drawn swiftly across the roof of the mouth, the blood drips into a trough and is carried away by running water. Death soon results. The slain

fowl is thrown onto the "pickers' rack," where it is washed from the beak and the feet thoroughly in hot water. The picker then dips it into a scalding water, after which the feathers are removed. Those salable packed in bags and sent to Boston they sell at forty cents a pound. After being packed in cracked ice and shipped to the market.

The amount of work entailed to take thirty ducks through the twelve weeks of their existence imagined when one considers that besides the superintendent six men and nine women are kept busy from early till night. During the hatching season, which from January to August, sixty incubators, each capacity of two hundred and eighty eggs, are kept constantly, the eggs being supplied by about eight "old stock." Two tons of mixed feed, aside from 1 of loaves of stale bread, are required every day this vast flock. A week's shipment averages 11 of dressed fowls.

It perfects digestion, enriches the blood, strengthens the nerves, and builds up the general system. It is the most permanently beneficial Tonic.

WATERING PLACE AND PARADISE OF THE WHITE HOSTS OF DUCKLINGS.—Phelan.

# One Thousand Miles of Collars

WOMAN'S WORK IN ONE AMERICAN CITY—TROY, N. Y.

By Harry Beardsley

IF ALL of the collars and cuffs made in a year in Troy, N. Y., were placed in a single line, end to end, that line would be more than a thousand miles long. It would extend from New York City to Chicago with several miles to spare. Ninety-five per cent. of all the collars manufactured in the United States are produced in New York State, and 85 per cent. of the entire country's product comes from Troy. That an industry of this magnitude and one whose product is of such general use should be concentrated in a city of 75,000 inhabitants is perhaps the most interesting industrial phenomenon in the country. From it arises a variety of unique conditions.

Troy is called "the collar city" of the world. Here the very first collar detached from the shirt and bearing a semblance to that article of apparel as it is known to-day was made; and since that time, seventy-five years ago, the industry has increased, with Troy always as its centre, until now collar-manufacturing involves twenty million dollars annually and gives employment to nearly 18,000 persons, whose wages amount in the aggregate to between eight and nine million dollars.

Although the factories which construct these finishing touches of a man's attire are in some instances immense plants employing thousands of people—great, buzzing nests of activity—a large and important part of the work is done by women in their homes. For this is distinctively a woman's work, and while in the city of Troy the great factories are humming, through all the country round, in the farm-houses and villages within a radius of fifty miles, the women sitting in their own homes are helping to make the collars of the United States. It is the skill of these women as well as those who are employed within the factories that enables thirty manufacturers in and near Troy to turn out complete every year about 60,000,000 collars, cuffs, and shirts; and it is these same women, in the small houses of the city, in the villages roundabout, and on the farms, that make it impossible for this industry to live elsewhere.

There is no other community in the country where the women have acquired this skill, and so the factories remain in Troy, and when a new one is founded its home is of necessity at Troy. At Albany, six miles away, at Glens Falls, N. Y., a little farther north, are collar factories of consequence, but they are not so far removed as to be unable to use the skilled labor of the "Trojan" women, who have been educated for this special work through three generations.

Other large manufacturing industries have left the East, drifting westward with the tide of population. Troy was once the heart of the stove industry. Now most of the stoves are made in Michigan and other Western States. In moving their plants the stove manufacturers went nearer to their centres of distribution. They have saved money in freight and saved time of transportation, which is also money. Like that of every other manufactured commodity the Western market for collars, cuffs, and shirts is growing more rapidly than the Eastern, but the factories have not moved with the market. They have perforce remained in Troy because natural conditions and the women willed it so. The experiment has been tried. An effort was made and a large amount of money was expended to establish collar factories in another district in New York State. But the venture was a disaster. The manufacturers were unable to get the skilled labor which is the necessity of the business.

The women who make collars in their own homes are usually housewives, most of them working at the collars for "pin money," by using the time which they can snatch from their household duties. In their leisure moments the women of Troy and the villages and farms which are tributary to it do not knit. They work on collars. The craft is taught by mother to daughter, so that while the old grandmother, sitting in her corner, is "turning" collars, the young girl, her grandchild, is busy with the same work; and when the mother has finished her household duties she picks up the collars with the others. Sometimes the woman who is very skillful with the collar-making employs another for the duties of housekeeping and uses all her own time at her trade, making enough money frequently to support her family.

The girl working in the factory is married. She and her husband have perhaps a little cottage of their own. After the honeymoon and when life under the new conditions has become a routine, the young wife finds that she has idle hours during the day. She has formed the habit of industry by her work in the factory; besides, the money which she could earn by her skillful fingers would be a substantial aid in the support of the new home. So she goes to the factory where she was employed and she receives her portion of home work to do. There are hundreds of just such situations in Troy or near it. On account of this fact young people are able to marry when, were it not for this opportunity for the wife to contribute to the expenses of the home, the marriage could not take place.

The fact that so much collar-making is done in the homes of the Troy district has brought into existence another industry, small and subsidiary. This is the delivery of "piece-work" from the factory to the home, and, after the women have done their work, the return of the goods to the factory. There are thousands of these deliveries to be made, and during busy seasons scores of men and boys are engaged in it. Each stage-coach, trolley, or steam car that runs daily into Troy from surround-

ing places—Mechanicville, Ballston, Greenwich, Hoosick Falls, North Stephentown, Grafton, Barber, and other places—carries bundles or baskets of collars ready for the next process in the factory, and when the conveyances return they carry with them more bundles containing more work. The bundles and baskets are collected at the gates or the doorways in the villages or at the farm-houses, and when the conveyance returns it is met by some one who is on the lookout as one is on the lookout for the postman. For the delivery of one of these bundles the stage-driver usually receives ten cents from the farm or village women, so that each trip with a laden wagon is a profitable one for him. So many women in these villages are engaged in collar-making that one who passes along the street in the early morning before the stage has come is surprised to see the roadway lined with baskets and bundles waiting at the cottage gates for transportation.

The beginning of collar-making was in a home in Troy. It was in the year 1829, and the records say that a Methodist minister, one Ebenezer Brown, who had retired from his pulpit on account of ill health and conducted a little furnishing-goods shop, contrived the first collar. It was called the "String Bishop," and in some respects it resembled the golf stock of the present day. It was a standing collar and, like a clerical one, was not open in front. The ends of the collar formed the tie. These ends were crossed at the back of the neck and then brought around to the front and tied in a double-bow knot.

Until that time the prevalent collar had been that which was a component part of the shirt. The "Bishop" was made by Mrs. Brown, the minister's wife. The novelty of it attracted attention. Soon there was a demand for these new collars and Mrs. Brown had more than she could do. Her husband, the minister, employed other women, who were instructed in the work, and the infant industry, being established, began to grow. The minister, its founder, carried his product from door to door in a basket, selling his collars at twenty-five cents each. His trade increased until he had little factories in Troy, Lansingburg, and Albany. The Rev. Ebenezer Brown was making money. His success attracted others, who, learning his methods, embarked in the same business; and thus Troy became the collar city of the country. Some of those who are to-day engaged in the manufacture of collars in this great collar centre are the descendants of women who made collars in the days of Ebenezer Brown. It has come to be almost an inherited skill.

The next great epoch in the industry was marked by the introduction of the sewing-machine. At first the collar-makers hesitated. The employers and the workers had the usual prejudice against an innovation. When machines for stitching were first offered to the manufacturers there was only one who would undertake the experiment; but his success soon forced the others to adopt the new invention, and then the manufacture of collars rose to another plane, from the small, slow work of the hand and needle and shears, to the whirl and hum and wonderful rapidity and efficiency of the machine. And gradually the steel and the brass in its cunning mechanical adaptations of force have encroached upon the field of human sinew until a modern collar factory is now a great organized machine, and the men and women, the operators, are only a small part of the mechanism.

By far the preponderance of the machine work is, of course, the sewing, and it is in this department that the greatest number of machines is employed. The sewing-machines have always been operated by women. As in the days of the Rev. Ebenezer Brown, when the sewing-machines were first introduced practically all the work of making the collar was done in the homes of the women who were employed. They bought and operated their own machines. As the business grew it became apparent that time could be saved and inconvenience avoided by having all the machines in one room at the factory. At first they were run by the foot power of the operator, while the employer furnished the light and heat for the room. Then it was evident that each operator could accomplish more if power were supplied. But the operators still own their machines, although they are run by power supplied by the company which employs them.

Sewing-machines, such as are used in the collar factories, cost from \$22.50 to \$100. The manufacturer usually buys the machine first, and then sells it to the operator on small weekly payments, fifty cents or one dollar, according to the cost of the machine. One would naturally suppose that the making of a collar is a very simple process—a little cutting, a little sewing, some buttonholes, washing, and ironing. In general this is all, but each process involves innumerable details. Each manufacturer is striving constantly to produce a collar that will be pleasing to the customer. One has no idea what a particular class of work it is to make a collar.

The manufacturer, better than any one else, realizes this physical fact: that the neck is a peculiarly sensitive part of the body. He knows that nothing causes the ordinary man greater discomfort or more annoyance than an ill-fitting, irritating collar. The problem before the manufacturer is to produce a large quantity and yet have each collar perfect. This requires constant inspection. In one large Troy factory two hundred persons, mostly women, are engaged constantly in looking for defective work. The collar is inspected at every stage of its progress. And as each dozen bears the number of the employee who

worked on them, the mistake is quickly traced. Often it is the piece of goods or the machinery that is at fault.

From the time of its inception in the mind of the manufacturer to its delivery in the neat box packed in a large case at the freight depot, a collar passes through many handlings. "Ideas" for new shapes in collars come from suggestions made by the traveling men of the collar companies, who watch the tendency of the neckwear and who learn by contact with people the pleasing and displeasing features of a brand of collars. English styles are sometimes copied; and when one manufacturer has introduced a popular brand others hasten to make collars of a similar pattern. The style is affected sometimes by the fashion in neckwear, and new styles are sometimes successfully introduced by leading haberdashers.

The evolution of the collar is interesting. The new style is sketched out and then wooden patterns are made, a pattern for each separate part of the collar. The linen and cotton from which the collar is to be cut is lying stretched on long tables. The cutter, with his short, sharp blade, cuts out the different parts of the collar through about forty-eight thicknesses of white cloth, cotton for the interlining, usually linen for the outside. A machine is also used for this work on the collars of plain patterns and it will cut eight hundred dozen a day, while a man with his knife will not cut out more than an average of ninety-six dozen. Then before any stitching is done that piece of the collar which later becomes that part of the band next to the neck is stamped with its name and size and number by a printing machine.

In making standing collars and in the case of some of the turndown collars the succeeding process is the pasting together of two of the different layers, which is rapidly done with a dab of the paste-brush; so that the "running," or stitching together of the parts—the next operation—can be done without delay. The pasting is performed by women, some in their homes, others in the factory. The "running," the first machine work, is done in the rooms filled with the rumbling, whirring machines. From that time forward the machine predominates.

The "turning," the next process, however, is the most important work done by the women outside of the factories. The collar or band which has been stitched wrong side out is turned by hand, then the edges are turned in even, and the collar is ironed. For this work women in their homes receive two and a half or three cents a dozen and make from one to eight dollars a week, according to the time employed. After it is turned the collar is taken back to the factory and again stitched and overseamed. Then the band, if the collar is a turndown, having been through a similar experience, is sewed into the "top" of the collar. The buttonholes are then made by wonderfully rapid machines which punch and surround the buttonhole with stitches in a very few seconds.

In special instances—collars of highest grade—buttonholes are made by hand and are worked by the farmers' wives, who receive fourteen cents a dozen collars, each having three buttonholes. After the buttonholes are finished the collars are sent to the laundry in immense quantities and washed for four hours in great revolving tubs that resemble inclosed steamer wheels, where in successive stages the soap, bleaches, and rinses are applied. Some collar factories have laundries of their own. The wet collars are dried by centrifugal machinery, but starched by hand, and the starchers in the factories which have their own laundries are the best-paid employees.

The starchers are all women, and they stand at long tables rubbing the starch into the collars by hand and then wiping them with a cloth. It is hard work, because the temperature of the room is high and the women are always on their feet. They make from ten to twenty-four dollars a week, and are paid by the dozen collars. Those who earn the most in collar-making, where nearly all the work is "piece work," arrive at the factories at seven o'clock in the morning and remain until six at night, taking sometimes only five minutes' time for lunch and moving with lightning speed at their work. The work, however, is not necessarily arduous. Many of the factory girls do not go to their places of employment until half-past eight or nine o'clock, and leave the factory at five in the afternoon. As they are paid by the number of dozens of collars, cuffs, or shirts which they handle, and not by the hour, the length of their day's work is optional.

After the collars have been starched they are hung in drying rooms, where a temperature of two hundred degrees is maintained. They are soon dry enough for ironing. This is the last process in the making of a collar, and is performed chiefly by machinery. Collars are fed into a dampening machine which is like a huge wringer, in which a dozen of the white strips of neckwear are put at once, and afterward they are as rapidly placed in an ironing machine which is also like a great wringer, with heated rolls; and a dozen or thirteen collars are put into it at once by one girl. In one of the factories is another machine, which afterward irons the collars in circular form. The best collars are, however, ironed by hand, the work being performed by women. Shirts are ironed by hand by men and women, and men, being stronger, are the better ironers.

There are so many processes in collar-making that only a very general description of them has been given here; much has been of necessity omitted. The mechanical part of the industry alone is worthy of a book, for in it

### Ruskin's Hopeless Love.

A CONTRIBUTOR to an English contemporary states that there is in existence a letter by Ruskin which he himself has seen, giving Ruskin's own account of the separation from his wife. It shows, we are told, that there was nothing more than incompatibility between them. The real passion of Ruskin's life came to him when he was a man past fifty. He fell in love with an Irish girl, Rosie Latouche. She loved him, but their religious differences were insuperable. The girl died while still a girl, and Ruskin broke down. The misfortune clouded the rest of his life in despair. He fell in with Spiritualists, who revealed to him the spirit of his dead lady. Hence came the crushing collapse which ultimately overthrew his brain.

Stronger and better men and women are those who use Abbott's, the Original Angostura Bitters. Druggists.

### When a Woman Is Happiest.

LADY ARABELLA ROMILLY discusses, in an English magazine, the question, "What is the happiest period of a woman's life?" She says: "Must not a woman wait till her life is nearly over before she can answer that question truthfully? For to each woman, married or maid, the idea of happiness must differ according to her temperament or estate. But in summing up many examples, in looking back on beautiful memories, married, I think that the happiest period of a woman's life is the time when she has a nursery full of little children—the baby years."

### Salesmen's Trials.

BAD FOOD IS ONE OF THEM.

Road traveling is rather hard on salesmen. Irregular hours, indifferent hotels and badly cooked food play smash with their digestion.

An old Philadelphia traveler tells how he got the start of his troubles by using Grape-Nuts. "For years I was troubled with a bad stomach, which gave me constant headaches and pains all through my body, caused by eating improper food. I spent considerable money on doctors, who said I had indigestion, and after taking medicine for a year and it doing me no good, I decided to go on a diet, but the different cereals I ate did not help me. If it hadn't been for the advice of a friend to try Grape-Nuts, I might be ailing yet."

"I commenced to feel better in a short time after using the food; my indigestion left me; stomach regained its tone so that I could eat anything, and headaches stopped. I have gained in weight, and have a better complexion than I had for years. At many hotels, the salesmen will have nothing in the line of cereals but Grape-Nuts, as they consider it not only delicious, but also beneficial for their health in the life they lead." # The Promised Land—The Story of a Real Thanksgiving

By Mabel Clare Craft

"BE CAREFUL, Dong Ho; don't fall, don't fall. Keep in the middle and the bamboo won't creak so. Take hold of the roof and pull yourself up."

The words came through the open skylight of a flat-roofed house in San Francisco's Chinatown, in a sharp and hissing but stifled whisper. It was the chill hour before the dawn of a dark March morning, and two small, trousered figures were clinging to a sagging bamboo ladder which led from an attic and slavery to a flat roof and freedom.

The thin cotton trousers of the little Chinese serving-maids blew about their slender ankles, and their blouses belled out like sails. The child in advance was heavily-featured, almost stolid; the girl who protected the rear had a mobile face, with a low forehead and eyes that danced in her plump yellow cheeks. The first child carried a bundle tied in a faded bandanna handkerchief and was visibly trembling; the second was enjoying the adventure.

Around them in every direction stretched the monotony of the roofs of Chinatown—Chinatown, once the abode of fashion and wealth, now given over to Oriental occupation, with its alternating brilliancy and squalor, its bright red papers fastened beside every window and door to frighten away evil spirits, and its great, beautiful, transparent, bobbing lanterns like apples of the Hesperides. Two blocks away, motionless in the still morning air, hung the big yellow flag of the Chinese consulate. A terrible dragon was embroidered upon it, but the folds of his voluminous tail and the lightning of his vigilant eye afforded no protection to little slave girls running away. Above them rose the higher parts of the city—American homes, terrace on terrace, with streets cut out between, like gingerbread slices, and near by a golden cross faintly tipped with the dawn's glory was as powerless to protect the children as the sleeping dragon on his yellow bed. The eyes of Dong Ho filled with tears. In one hand she held her bundle while the other was firmly clasped in the heartening grasp of Suey Leen, who led her over the roofs. Suey Leen talked as they walked, climbing over chimney pots and low partitions, and passing carefully from house to house.

"You must go down when you come to a stairway, little sister," Suey Leen was saying, though Dong Ho was taller than she and older, "and then you must hide all day till it gets dark and then hunt for the school. Remember it is up and not down the hill, Dong Ho. Whatever you do, keep climbing the hill and you will find the school in time. Tell them that I'm coming too," she added, a little wistfully.

"Oh, come with me now, sister; I'm afraid to go alone. I shall be lost, I shall be lost," wailed the traveler.

"Hush, hush," said the other. "Don't make so much noise. I dare not go with you. You know very well that the whole town would be roused in an hour and that we should both be caught. Perhaps the fear of losing me will keep them from pressing you too closely. And whatever else you do, don't forget that it is up the hill, not down, for if you come back to the Quarter you are lost."

It grew lighter and more light. The rubbish on the roofs was plainly visible now, and a little way off was one where thousands of fish had been hung to dry. The unsavory incense smelled to heaven, and already the fishermen were coming out to turn over their stock, damp from the night's fog. Suey Leen saw them with apprehension and, hugging Dong Ho spasmodically, and repeating her directions for the hundredth time, she turned and fled noiselessly toward the skylight whence she had emerged.

For hours Dong Ho waited, sometimes behind chimneys, sometimes behind a box, while the sun climbed the sky, the church bell rang in a red tower not far away, and the Sabbath calm fell over the noisy streets. Cable cars rumbled below her, the hoofs of horses clicked over stone cobbles, and silent Oriental figures shuffled in and out of sombre doorways, whose fan-lights and marble steps told a tale of better days. At last Dong Ho came to a roof that led to none other. Below was the street, and at one side a small hole led into a dark hallway by means of a very decrepit ladder. To go back meant to go down hill, and Dong Ho had but one purpose in life—to go "up the hill." Down the ladder she went with fear and trembling. As she hesitated, her small, sleek head like a swallow's above the ladder, some one came up

to the roof not ten feet away, and, instinctively ducking, Dong Ho plunged into the lower darkness. The ladder led into a long hallway. At one side she heard the voices of men playing *fan-tan* and two stories below her was a faint glow—the light of the street. Faint with hunger and weeping, Dong Ho and her bundle squeezed themselves into a dark and ill-smelling corner under the stairs, and from there two small dark eyes shone through the semi-gloom and two small ears listened alertly, missing not the slightest sound. Once, when a crowd of men lounged out, Dong Ho shrunk into a still smaller compass, but even then their blouses swept her shoulder. They were so near that she dared remain no longer, for the sun had crept around and one long sunset ray illumined the tiny covert where she lay. At last, plucking up her last bit of courage, she arose on her stiffened legs and fled silently down the hallway and into the dusky street.

She was in a region of houses—old, but not yet entirely given over to Chinese occupancy—and for a long time she stood on a corner, unable to decide what to do. Presently it was borne in on her slow brain that she was attracting too much attention. An evil-looking Chinese with long straight locks hanging about the base of his queue was standing under a street lamp, regarding her unpleasantly. In despair, she fled up the steps of the nearest house.

Now the gods who watch over the river people must have been with Dong Ho just then. Had she turned to the left she would have gone to a house where the Chinese residents would have promptly returned her to her master, but, still bearing in mind her mystic talisman, "up the hill," she chanced to run up the steps of a crusty old bachelor who possessed a perfect treasure of an old Chinese servant. Fay Sook was passing through the hall and heard a faint knock at the door as though some bird were pecking for entrance. He opened the door and there, in the twilight, stood a pathetic little figure, tears in its eyes and on its cheeks, and a bundle tightly clutched in its hand.

"The school, the school, the school on the hill," she sobbed.

Instantly Fay Sook knew what she meant, and read the situation at one glance of his clever, beady eyes. He knew the red-brick mission house, the House Beautiful of so many Chinese girls. Often he had given them flowers and he had even been bidden to some of the weddings when the charges of the mission were graduated into wifehood for some of the Chinese men of the quarter. But he would not have dared to take the runaway slave there himself. The tongs are strong, their knives are sharp, and their aim is good. Fay Sook left the door ajar and vanished into the hall, just as the evil-faced Chinese passed below on the sidewalk to see what was transpiring on the terrace above. But Fay Sook had only gone to call the housekeeper, and in a few minutes that worthy woman was hurrying along the street with a woe-begone little Chinese girl clinging to one of her hands. The housekeeper was prim and old and gray—but then, there are many strange sights in the Chinese quarter.

Miss Cameron, the pretty young missionary with the Scotch burr in her tongue, had just lighted the lamps in the big sitting-room and she answered the bell herself,

unlocking the massive door and pushing back the heavy bolts of this house that is ever in a state of siege. There stood the housekeeper and the runaway—each dumb to the other.

"Fay Sook says this child is looking for the mission," said the housekeeper.

"A runaway slave?" inquired the missionary. "Come in, dear."

The interpreter came and with rattling syllables which exploded like fire-crackers, she said:

"Where are you from?"

"From my mistress."

"What is her name?"

"I do not know—only mistress."

"Stupid! You must know."

"No, no—only mistress." Dong Ho was crying again. Evidently they scolded even here in the big clean red house.

"Will you give me the bundle?"

"No, no. I must keep it until I reach the school on the hill."

"But this is the school and one has everything here. Come, the bundle. Don't tremble so—there is nothing to be afraid of. We don't beat people here."

Miss Cameron, not understanding, reached kindly for the bundle, but with a cry Dong Ho clasped it more closely to her. She hovered near the table with the big, cheerful lamp, unmindful of her tear-disfigured face—a little dirty, ragged, forlorn figure—while Miss Cameron untied the bundle and spread out a cracked rice-bowl, a pair of wooden chop-sticks worn to splinters, a broken wooden comb, two battered Chinese toys—souvenirs of the childhood that had never been—and a couple of soiled garments—the entire earthly possessions of Dong Ho.

Dong Ho went down to supper—a supper of Chinese stew and white rice flakes, with chop-sticks that were not worn, and a nice rice-bowl without a flaw—yet still her unoccupied hand sought her treasures, and when at last she fell asleep in the first bed she had ever slept in, her bundle was beneath her pillow.

The next day the newest comer was tenderly questioned by the missionary. She showed the marks on her arms, black and blue now, and the scar on her head, and she told the story of her "sister" who had saved her and who wanted to come to the school, too. But when she was questioned about the street on which she had lived she did not know, nor could she even give her sister's name.

For Dong Ho was only a common serf-girl, a bargain even in China, where she had cost but ten dollars, and she told her experience of household drudgery and commonplace cruelty quite simply. It had been her duty to wait upon her little-foot mistress, to cook, to wash, to sweep, to buy the food in the market, and, above all, to look after the three children of the household all the day long. The babies, though good-natured, very soon understood that this older child was their beast of burden and treated her accordingly. Wherever she went she was obliged to carry the youngest of them strapped to her back in a big silk handkerchief. The next younger she carried in her arms, and the third struggled along in his ungainly apron and stiff trousers, clinging to her garments or to her hair. The child on her back was a lusty imp, and when Dong Ho did not go fast enough he kicked her in the ribs with his stout little shoes or pulled her hair cruelly, until she cried out.

Even with her tormentors in bed, Dong Ho was not free to rest her bones, which ached to the marrow with weariness. At twelve o'clock came the midnight supper, served in every Chinese household, and at eleven Dong Ho must again drag her aching limbs down and up the interminable stairs with materials for this last meal. And then, at last, when the household sank in slumber, the little maid was permitted to fold herself away on a wooden box which stood in the store-room, and, with an old sack for a pillow and no coverlet at all, she passed the hours of the morning in dreamless torpor. Very early, the old woman roused her with a parrot-like, querulous cry, and she must hasten to heat the water and carry it to her little-foot mistress. If the water were too hot the mistress flung it, basin and all, at Dong Ho, and if it were too cold, then it came just the same into her little sleepy face, until sometimes it seemed to the child that it did not matter whether she heated the water or not, for however hard she tried, it was sure to be wrong.

This went on for two

"AN EVIL-LOOKING CHINESE WAS REGARDING HER UNPLEASANTLY."

years, and it was inconceivable how the stunted little body contrived to bear up under its load of labor and sorrow. Nothing of Dong Ho grew except her hands, for the child was not an inch taller at twelve than she had been two years before, when she was belched forth from the big ship.

There came another baby into the household, and Dong Ho would certainly have laid down the fearful burden of her life, and had, indeed, often fingered meditatively her bowl of the deadly *pu fan*—that slippery, shiny stuff with which Chinese girls bandolier their hair against the breezes—when something happened to break the monotony of her life and to make existence tolerable once more.

The change was the coming of another slave girl into the crowded rooms. It was the Chinese New Year, when all Orientals, no matter how poor, pay their debts, and the master had been obliged to take a little girl in payment of a debt contracted by her mother. Beside his open and legitimate business, Hom Young was chief owner in a *fan fan* game, and among the most inveterate tempters of fortune was the widow of a Chinese scholar, in whose blood the gambling mania ran deep. But fortune never smiled upon her. Almost invariably she lost, and the new year found her so hopelessly involved that there was but one thing to do—sell her most valuable asset, her daughter, Suey Leen, to the owner of the *fan fan* game. And so the human pawn passed into the possession of a new master and Dong Ho had a partner in suffering.

The two children were utterly different in type, in temperament, in all that goes to make up individuality. Dong Ho's memories were very limited; her opportunities had been nothing, and she knew, dimly, that some time she would be sold into a still more degraded slavery. Added to this, she had lately acquired a trick of extreme clumsiness. So many times had the pan of dirty water been flung at her; so much had she been kicked and cuffed and maltreated that her head was in a state of constant bewilderment and her muscles refused to obey so weak and unstable a central government.

Suey Leen was quite the opposite. She had a round, pudding face, and even life at Hom Young's did not make her thin. She was quick, alert, adaptable, and so cheerful and sunshiny that even her owners liked her and thought with satisfaction of the good round price that she would some day bring. Suey Leen's father had been a scholar, and heredity is a wonderful thing. The girl had been born with a brain susceptible to cultivation, and every seed that fell lodged in her head and grew into a seemly plant. She had dreams and ambitions, too, but of course no one suspected so absurd a thing in a Chinese slave girl. And most of all her heart went out to poor, sodden, down-trodden Dong Ho.

Dong Ho's case became more desperate every day until it climaxed on the first New Year after the coming of Suey Leen, when Dong Ho dropped and broke all the stalks of the New Year files, compared to which the breaking of a looking-glass would be a paltry affair. To have the lily stalks broken meant failure in business, sickness, loss of mind, and sudden death, and the mistress tired her arms and back beating Dong Ho, until the child fainted from pain and fright and was dumped in a heap on the hard box in the store-room. Suey Leen stood quietly by, making not the slightest outcry, but with great resolutions crystallizing behind her clanting eyes.

As soon as the household was quiet and Suey Leen could speak to Dong Ho without attracting attention, she whispered, "Don't cry, Dong Ho; you shall not be sold to the wicked man, sister. I have heard from Yon Yet, who lives down stairs, that there is a house on the hill where they have a school for girls like you and me. We shall go there, Dong Ho."

The almond eyes of Dong Ho grew as round as nature would permit them. She had never heard of the mission school and she wondered that the sharp ears of Suey Leen had overheard some chance remark of the house-to-house visitor on the landing below, for the mistress would never permit a Bible reader to pollute the air of her dwelling. Dong Ho trembled in the dark—she was so afraid the household joss would hear the impious words of Suey Leen and rain down fire upon them. A few days they must wait, said the little Moses, until the New Year was over, the lanterns out, the crowds gone from the quarter, and Chinatown sleeping off the effect of its annual feast and house-cleaning.

At first Suey Leen planned to go too, but the more she pondered the more she felt the impossibility of escaping with Dong Ho. If they tried to go together, Dong Ho, through her stupidity, would endanger the entire plan and cause them both to be captured and thenceforth to be watched so closely that they would never have the opportunity to run away again. So Suey Leen surrendered the sweet thought of freedom with a pang and bent all her energies toward accomplishing the release of Dong Ho.

It was a Sunday morning in March when the parting came, and it was yet as dark as night. Since midnight, Suey Leen had been awake, while Dong Ho slumbered heavily at her side, unaware that a great crisis in her life was approaching. About four o'clock Dong Ho was awakened by a voice in her ear and dimly she heard the words of Suey Leen, ordering her to get up and dress, for the hour was come. Bewildered, stupefied, Dong Ho

arose, slipped on her stockings and her soft-soled shoes, fastened with cold and trembling fingers the small brass knobs and cord loops of her blouse, and made a little bundle of her tiny belongings, to use for flight over the roofs, and she did not know whether or not they had such things as rice-bowls and chop-sticks at the house on the hill.

In the room where the little slaves slept was a skylight far above their heads and in another part of the house was an old and rickety bamboo ladder, such as every Chinese house possesses, to use for flight over the roofs, in case of the service of disagreeable American papers by disagreeable Americans in blue coats, or in times of highbinder carnage. It was Suey Leen's part to creep in her stocking feet through the room where Hom Young and his wife were sleeping, and to carry the ladder back to the store-room. Tremblingly, stealthily, she accomplished her difficult feat, then held the ladder while Dong Ho climbed. Suey Leen's heart was in her mouth, for if Dong Ho stumbled or fell or made any noise at this critical juncture, not one serving maid but two would be sold into worse slavery. But for this once Dong Ho was nimble and sure-footed. Her shoes she carried in one hand, her bundle in the other, and her feet clung to the

fugitive have made her way from Suey Leen's side without that alert handmaiden's knowledge? Again and again Suey Leen found the ladder in her room and she knew that sly eyes watched from behind the partition to see if she would seek to take advantage of it. But though beatings were frequent and hard for the proud to bear and twice the drudgery of the old days fell to her share, Suey Leen never regretted that she had remained as a vicarious atonement for Dong Ho. It was seldom now that they permitted Suey Leen to go into the streets to buy the provisions for the family dinner. Plainly they did not trust her, and most of the time she was cooped up in the stifling room, waiting on her crippled mistress or amusing the restless babies.

But Suey Leen possessed the divine patience of her race. She knew how to wait. Spring grew into summer, and summer into fall, and Suey Leen was a model of contented industry. One day the watchfulness of the mistress relaxed and the child was sent out to purchase dried duck's feet. How her pounded-silver anklets clinked against her shoes; how musical was the sound they made! Hatless, bundleless, coatless, Suey Leen sped up the steep streets and in a half-hour had inquired the way and was pulling frantically at the basement bell of a brick building from which came sounds of shouting, metallic, childish Chinese voices:

"Yes, Jesus lubba me,  
Yes, Jesus lubba me,  
Yes, Jesus lubba me,  
De Bibul tell me so."

It chanced to be Thanksgiving Day and the little Celestials were celebrating, they knew not how or why, dressed in their brightest, which was their best, and wearing bracelets and anklets, while they sang hymns to admiring Occidental auditors.

They let in the new child and jubilated over her, for there is more joy in the mission over one girl who comes of her own free will than over the ninety and nine who are captured by force or guile, for the voluntary recruit shows that all the seed does not fall in barren soil.

"What's your name?" asked the interpreter.

"Suey Leen," said the child, promptly.

"Where are you from?"

"The house of Hom Young."

"Do you wish to stay?"

"Forever, yes, if you will take me."

Dinner was over, but Suey Leen ate ravenously of the festival fragments and smiled her gratitude.

"She must be tired after the excitement," said Miss Cameron. "Best take her up stairs at once. There's a vacant bed in the west room."

So Suey Leen went pattering and tinkling up the oak stairs, her bangles making soft, hethen music as she mined along behind the quiet and demure interpreter, who went ahead, candle in hand, like some young, slant-eyed Saint Cecilia. The next moment a wild shriek resounded through the peaceful house.

Miss Cameron dropped the baby she was undressing and ran for the stairs, visions of fire and highbinder chasing each other through her head. A patter of Orientaly-shod feet led the way to the dormitory, where Dong Ho and the latest comer were clasped in each other's arms. Such a flood of questioning and cross-questioning, such babble of reminiscence, of experience, of confidence, of gratitude, of soft tears and softer laughter—the interpreter, little autocrat that she was, could not get in a question edgewise—but through it all sounded "Ga Che, Ga Che," my sister, my sister.

It was certainly a half-hour before the mission knew for a certainty that this latest arrival was Dong Ho's "sister" and saviour, for whose coming her dumb and patient heart had so longed.

At last, in the briefest of silences, Dong Ho said:

"Miss Camelon, this is my sister who helped me away over the roofs. I'd have died long befo' this, Miss Camelon."

The ladies of the board were the guests of the home that evening. The room was pungent with burning punk-sticks, but the nuts and the roasting apples before the fire spoke of New England.

"I love these Down-East celebrations," said the clergyman with the Bangor twang. "They remind me of the Thanksgivings at home when we talked of the first Thanksgiving, of the scanty harvest and the full graveyards, and the Puritan fathers with their hearts full of thankfulness for what we should scarcely deem mercies."

"Yes," said the missionary, musingly, "but the real Thanksgiving is up stairs."

### Instability of French Ministries.

IN ONE respect at least French ministries bear a close resemblance to the governments of South America, and that is in their changeableness. M. Waldeck-Rousseau held office barely three years, but his ministry holds the record for length of service. "From the top of the Republican pyramid forty ministries look down upon you," was the phrase which M. Blowitz addressed to M. Combes when he formed his government several months ago; and it was a true as well as a striking phrase. The French ministry is the forty-first since 1870—forty-one ministries in thirty-two years. One of them lasted eighteen days. This is carrying the principle of rotation in office to extremes.

OH, it's just before Thanksgiving!  
And there's something in the air  
Making life well worth the living—  
You can note it anywhere.  
Something jovial and pleasing  
In the people that you meet.  
Mixed with incense wondrous teasing  
Permeating room and street.

IN the kitchens of a nation  
They are busy baking pies;  
And the turkey's red oblation  
Forms the barnyard's sacrifice;  
While our Johnnie at his station  
On the threshold plants his toes  
And sends wireless information  
To his stomach by his nose!

FROM the cities, steeps, and prairies,  
Where "the children" widely roam—  
Wills and Harrys, Beths and Marys—  
All the roads are leading "home."  
And the lashes gladly glisten,  
Hanging loose is every latch,  
As the "old folks" wait and listen  
E'en the lightest step to catch.

CRIB and now are brimming o'er us  
With the harvest, safe at last,  
And the future smiles before us  
With the fullness of the past.  
Midst the bounty all-sufficient  
Of the present and its cheer  
Let us thank a God omniscient  
For the blessings of the year.

smooth bamboo rounds as the feet of her ancestors may once have clung to the gnarled limbs of trees.

The quiet days in the mission lengthened into weeks and months and the owner of Dong Ho made no effort to trace her. The mission house is uncommunicative as the tomb, and Hom Young knew very well that a hue and cry might lose him the more valuable Suey Leen. And besides, there were plenty more girls to be had for ten dollars in China. Slowly, very slowly, the child learned to read English and Chinese, learned to do housework American fashion, learned to take care of the charming tea-rose babies that are now and again born into the mission, to sing American hymns, and to go back a little way into the realm of her lost childhood. But whenever duties did not call and there were no lessons to be learned, you might always see Dong Ho with her nose pressed against the bars which guard the mission windows, looking for the sister who never came.

To tell the truth, things were not well with Suey Leen. The Hom Youngs suspected that she had been the means of Dong Ho's escape, for how, they argued, could the

## In the World of Sports

TRUE SPORTSMEN ARE NOT BUTCHERS—FOOTBALL NOT ALWAYS BRUTAL—CHANGES IN GOLF MANAGEMENT.

**SPORTSMEN? NOT THEY.**—President Theodore Roosevelt and ex-President Grover Cleveland are sportsmen in the field and in civilian clothes. Both enjoy nothing better than a chase after dogs in the fields and woods or to be seated in a blind trying to outwit the cunning wild fowl. But neither has ever been accused of the willful slaughter of game merely for the pleasure of killing. Each has done his share in furnishing to the comic caricaturist opportunities for his pencil on hunting subjects, but neither has ever boasted of a feat recently performed by the Prince of Wales in England, one of which the future monarch seems to be proud. The prince was one of a party of hunters who enjoyed a few days' shooting at Netherby, England. Three thousand five hundred ducks were killed in three days, and the prince swelled with pride when, on the third day, he himself killed ninety-six birds in sixty minutes. While this is a record bag for wild ducks in England, many a real sportsman will shudder at such a performance. There are pot-hunters in this country who would feel pride in such performances, but no true sportsman. Now that the sportsmen are taking to the woods and fields with the first heavy frosts, a story that actually happened in Tennessee, told for the first time, might be interesting here. There were four in the party, three from the North, more shame to them. Three were men who bet, and each day before starting out a heavy wager was made as to the number of kills each would make that day. Quail were plentiful, and as all were good shots the bag each day was large and difficult to carry. The wagers increased in size, and of course the birds became more troublesome to carry. Finally each man decided to simply wring the head from each bird as it was brought in by the dogs, the body of the quail being tossed aside. When the day's slaughter was over the heads were easily counted, and of course they did not weigh much. Yet at least two of those men would feel affronted if told that they were not sportsmen. They were anything but that—mere butchers and blackguards. The county jail is the place for men of this sort. I would like to have their pictures and print and label them so that they could be kept away from all shooting grounds in the country.

**IS FOOTBALL BRUTAL?**—If that robust game of football happened to be half as brutal as the enemies of the game would have the remainder of the world believe, the hospitals and cemeteries would be full at the beginning of each winter. It is an active, strenuous game, and there is no place for weaklings in the line or back field; and while there is no doubt that the game can be vastly improved and made more spectacular and interesting for the spectators, it is equally true that the sport has as great a following this year as it ever had. Football, as played by the university teams, holds its own, and there must be something to it or this would not be the case. There have been games this year in which slugging has been too conspicuous, and there have also been games in which straight scientific football has been played from start to finish. In their effort to get strength and beef at almost any cost, some of the captains and coaches have placed men on the team better fitted for something else than a place on a university team of any sort, but such cases are the exception rather than the rule. There have been few scandals connected with the game this fall, and the season as a whole will wind up, with the annual battle between the navy and army at Philadelphia, in good order. If some of the association tactics could be introduced into the college game they would improve the sport in the most healthful sort of way, but it seems doubtful if the American universities will ever borrow anything from their English cousins in the football line. So when a man or woman asks you if football is really brutal you can answer only that it depends almost entirely on just how the game is played. Some games are as demoralizing and hurtful as prize-fights, and others are not. There have been men who deliberately tried to maim and injure seriously the players opposite them, but such cases are fortunately rare.

**MIDWINTER RACING ON A LARGE SCALE.**—It is only within the last year or two that the wealthy men of the running turf gave much attention to racing after the closing down of the regular season in the East. The winter tracks in the middle West and California, and at New Orleans and Charleston attracted generally owners of average financial standing and an ordinary class of horses. Times have changed, as the recent meetings at Aqueduct, near New York, and at Washington show. The millionaires are just as anxious to fill their racing coffers as are the little fellows who are compelled to look so carefully after their feed bills and racing expenses. The result will be that a better class of horses will be seen at the winter tracks this year, and for the sake of the sport cleaner racing ought to result. It is beginning to look as if the turf would be the better off if paid stewards were placed in the judges' stand and absolute power to look into suspicious jockey rides and performances on the track given to them. More money has been wagered on the turf this year than ever, or than was ever bet at the tracks in England or France, and it looks as if the bettors were entitled to some protection from the wolves and "shysters" of the turf. They did not receive it this year.

**WILL TROTTERS REACH THE TWO-MINUTE MARK.**—The prediction was made pretty generally early in the year that the trotters and pacers would break all records during the season. Yet comparatively few records of account have been made during the season of 1902. Some of the drivers are of the opinion that the great trotters and pacers have been campaigned too persistently during the season, and in consequence their speed and endurance have been diminished. Such rich prizes and so much bonus money are offered for their appearance that the animals are overworked and when called upon for some special effort cannot do their best. Crepus, the greatest trotter of them all, is certainly not as fast at present as he was at this time last year. His owner, George H. Ketcham, is particularly anxious to have his favorite travel the mile in two minutes, but it is doubtful now whether he will ever do it. Among the pacers Dan Patch performed nobly, yet Star Pointer has not been dethroned as yet.

A CURIOUS SIGHT IN AN ENGLISH VILLAGE—FISHING FOR TROUT IN A SEWER AT WINCHESTER.

**INDOOR SPORTS TO BOOM.**—Every indication points to the fact that the coming winter will be one of the most interesting in many seasons. In all of the large cities preparations are being made for athletic games, hockey matches, billiard and pool tournaments, and social functions in which the sporting world will take a lively interest. A positive boom is promised in billiards in spite of the fact that some of the best professionals are abroad at present. Ping-pong has not awakened as yet from its midsummer slumber, but it will probably do so when the indoor season opens up in real earnest. Hockey is bound to be popular, and in towns where no rinks are to be had the game is sure to be played pretty regularly whenever ice on the lakes and ponds will permit.

**CHANGE IN GOLF MANAGEMENT DEMANDED.**—For some time golfing enthusiasts, especially in the West, where the game has kept pace with its advancement in the East, have been dissatisfied with the methods used by the officials of the United States Golf Association. While changes will not take effect until the annual meeting in February, they are pretty certain to be made. At present the management of the association is confined to a handful of clubs in the East. The associate members believe that they should have a voice in the management of the association, and they will probably get it next season. Singularly enough, there are one hundred and eighty club members of the association, each of whom pays annual dues, yet has no vote. Under the proposed new conditions the game will be conducted on broader lines and dissatisfaction will not be so rampant.

GEORGE E. STACKHOUSE.

### Sporting Queries Answered.

**B. J. O., TRENTON.**—The shooting season for quail and rabbits in New Jersey begins on November 15th. On Long Island and in Connecticut the shooting season opens November 1st. Deer can be shot on Long Island on the first and second Wednesdays and Fridays in November, and at no other time.

**J. M. C., CHICAGO.**—A bicycle rider ceases to be a novice as soon as he wins a prize in an open competition. It does not matter whether he finishes first, second or third. It is a strict rule, but necessary to prevent riders from winning second and third prizes and not trying for first.

**F. A. H., CHICAGO.**—Many players have signed with two clubs and received advance money from each. The team they desert generally gets back the money advanced and the case is seldom taken into the courts. Baseball law and the law of the land never did get along together.

**J. H. M., MEMPHIS.**—Almost any sort of leather armor is permitted in football. In baseball only the catcher and first baseman are permitted to wear the big gloves. The practice of a pitcher wearing a glove on his "easy" hand came into vogue about five years ago.

**H. B. F., WORCESTER.**—It is always best to use a guide when shooting in a district where you are not known. They know the places which are posted and will save their hire and you much trouble.

**M. A. C., LOUISVILLE.**—There is no weight limit in a bicycle race. You can ride a wheel as light as safety will permit. Winning a first, second, or third prize debars you from future competition in novice races.

**W. H. T., CHICAGO.**—According to George Davis himself, he has not signed any baseball contract for next year. He will probably play with the New York team of the National League.

**L. A. M., ST. LOUIS.**—Two national automobile shows will be held during the winter, one in Chicago and the other in New York. Other shows will be merely of a local character. G. E. S.

### Fishing for Trout in a Sewer.

**Q**UITE A common sight in the streets of Winchester, England, is presented in the accompanying picture. A resident, of the lower classes, stands at the curb, fishing for trout, which abound in the various small streams that traverse the city, flowing in part on the surface, partly under bridges, and reappearing again, later on, in the open. Along the course of these streams gratings are frequently seen, through which rain water passes and is carried off by the streams. Here the angler stations himself and his patience is usually rewarded with a very substantial catch.

**TELEPHONE SERVICE SAVES TIME.** Time is the stuff of life. Have telephone service at your home as well as at your office and save time at both ends of the line. Rates in Manhattan from \$48 a year. N. Y. Telephone Co.

A FEW OF THE WELL-KNOWN GRADUATES OF THE AMERICAN ACADEMY OF DRAMATIC ART.

## Getting on the Stage

By Eleanor Franklin

Robert Taber, now a leading actor in London. *Par.*

"I'M GOING on the stage" is a simple enough statement to make. It springs easily to the lips of such a host of boys and girls who are so unfortunate as to be endowed with an over supply of what we, for want of a better name, call "temperament." The word unfortunate is used, if you please, in connection with the temperament and not the stage. The possession of that feverish characteristic cannot but seem unfortunate to one who chooses to limp along by the side of the procession and meditate upon the strugglings and stumblings it is responsible for in the lives of others.

Now it is easy enough to make up one's mind to "be an actor," but once this important preliminary is passed one finds one's self face to face with a gigantic "How?"

In the preparation for any other business but the theatrical there are straight and well-beaten paths to follow. A boy makes up his mind to become a doctor. Immediately his whole course of action is mapped out in front of him. He sees ahead of him a long course of preparatory training for medical college, then four years of medicine before he is ready even for the months he must spend in hospital practice before he can open an office and begin his life's real work. The same rule of certainty and precision applies to any of the other great professions, and to the preparation, in fact, for most any kind of a career but the actor's. When a young man says "I'm going to be an actor" he can't know for a certainty whether he is or not, because there is not a single signboard upon youth's highway to point the way to success in this most fascinating and oftentimes most lucrative profession.

There are very few young men and women who "go on the stage" who do not religiously believe that opportunity is all they need to place them where by virtue of nature's beneficence they belong, beside those whose names adorn our bill-boards and light our streets by glaring down upon us from great electric signs. Oh, it will take time, of course. No one ever became great in a day. People are said to have achieved fame in a single night, but never without years of patient waiting for opportunity. Never without years of work and tireless ambition, too often embittered by hardships and priva-

tions. How aspiring youth does love those words, "hardship and privation." One may never have to suffer either, but somehow one is always sentimentally anticipating that distinction and squaring one's chest to meet them bravely when they come.

If we could only "peek" into the back of the book of life and see how it is going to turn out! But alas! every page is written in a different language and we must learn each as we go, poor children! Where is there an ambitious but impecunious actor who does not know that E. H. Sothern was once on the very bottom rung of the ladder, that "he has been seen sitting in a dejected attitude on a bench in Union Square with fringe on the bottom of his trousers." I quote this because that is the way an actor told it to me, and so they tell it to each other for self-comfort while they go on dreaming of the time when they too will be the "admired of all," when their talent shall have gained the recognition it deserves. Richard Mansfield's early struggles against adversity is another pet subject for discussion in the lower stratum of theatrical society, while to hear a fluffy-haired, light-hearted sourette moan over the story of Clara Morris's tragic little beginning is enough to make a heart of adamant swell with a sense of grim humor.

Let an actor be discharged from a company for "incompetency" (a humiliating word used by some managers as an excuse for discharging an actor on any occasion), and he will tell you proudly that the same thing occurred to Joseph Jefferson and to Edwin Booth, and will look with pity upon the manager who, through ignorance and short-sightedness, falls into such an error in his own case. This is gigantic egotism. Yes, a fault most actors are accused of possessing, but a fault, dear judge, which makes the bitter battle against fierce longing and disappointment possible. That limelight glare is so alluring, you know, and it isn't a light which burns and kills either. Once let a ray of it fall upon one, and who would regret the struggle in the outer dark. But such difficulties as I have touched upon are those which beset the actor after he has passed through "the eye of the needle" and become a full-fledged professional. The "eye of the needle" is not too narrow a simile for the manager's office as it opens to receive a beginner.

"What have you done?" is the first curt question which a manager asks of an applicant for an engagement, and, poor overworked play manager, he hasn't much time to listen to youthful aspirations. If he is kind he may say, "Go on out and make a beginning; see what you can do, then come back to me," but more often he will say "No place for you" in a way to weaken the stoutest heart. I tell you a "beginner" is not wanted anywhere in this busy world unless it is in papa's office or papa's store. If you are going against the world unaided in any capacity you must never be a beginner. Pretty soon it will cease to be necessary to "bluff," and then you can make it all right with your conscience.

Now there is a noted school in New York where a young man or woman may go and for a fair sum be directed through a course of dramatic art, and at the same time be given a full and satisfactory view of the situation which confronts the young aspirant for theatrical honors. Old actors have a deal of fun at the expense of these schools, and boast proudly of the fact that they got their training in the school of experience, but they forget that to-day it would be almost impossible for an actor to get the same course of training. The "palmy days" of the old stock company are gone—gone with the youth and hopes of the men and women who made them "palmy" and who now flout the new idea of dramatic training which seems to have followed naturally in the order of progression. I grant a two years' course at the American Academy of Dramatic Art at Carnegie Hall might prove wearing upon a restless spirit. Is there an ambitious, self-confident, temperamental boy or girl on earth who

wouldn't say "What's the use" to all the physical culture, grace exercises, "life studies," and lessons in how to light a lamp, close a window, or hand a lady a chair where there are no lamps or windows or chairs; but many a youth goes through it all with the hope ever present in his mind that it will lead to an opening into the "profession"; and, to do managers justice, this hope most always meets its reward, for it cannot be denied that two years' training in a well-managed dramatic academy, as the course is mapped out, is far better for the young actor than the same length of time in any company where he must necessarily meet most unpleasant experiences as a despised "beginner."

The American Academy of Dramatic Art gives, every once in a while, a students' matinee in one of the best of the New York theatres; and if a pupil happens to be marked with ability in any "line of business" that is profitable to find an easy introduction to a manager who intrust to him or her a not unimportant part at a salary, and so by one happy chance he or she becomes "professional" of enviable standing. This word "professional" I always quote when used in this connection because it has a distinct and individual meaning from "professional" standpoint. I saw this amusingly illustrated not long ago. Two men were introduced in a restaurant. They shook hands across the table and they sat down, one of them, unmistakably an actor, said "Are you a professional, Mr. Smith?"

Mr. Smith looked puzzled for an instant, then modestly, "I'm a lawyer."

"Oh, indeed!" said the other, spectacularly adjusting his napkin. "You look like a professional."

### Pure Cow's Milk

made sterile and guarded against contamination, beginning to baby's bottle, is the perfection of infant feeding for infants. Borden's Eagle Brand Condensed Milk has stood first among infant foods for more than forty years.

# Recent Astonishing Gold Development in Oregon

By Ernest C. Rowe

IN A territory as vast as the United States each particular section designated by the name of a State or group of States becomes associated inseparably in the mind with some natural product. When the name of California is mentioned the thought at once is of gold; Texas means cattle; Minnesota means wheat; Mississippi or Alabama suggests cotton. Oregon and Washington make one think of lumber. But these impressions, although they are fixed pretty firmly in the minds of most of us, may be misleading. And this is particularly so in the case of Oregon, for lumber is only one of its resources, and not the least of these is the production of gold. This is a unique condition, for here is a tremendous industry that has been moving forward quietly through many years, attracting only now and then the attention of the public, yet constantly growing in importance. There is a single vein of gold in southeastern Oregon fifteen miles long which has produced more of the yellow metal than any zone of its length in the world. This is called the Cracker district, and it alone entitled Oregon to a high place among the gold States.

If it were not for the overshadowing reputation of California, Oregon would perhaps be known as the gold State of the Union. If the "Forty-niners" had gone not to California but to Oregon first, and had opened there their first camps and had made among the rich veins of Oregon's mountains the large fortunes which have since been made there, then the stories and romances of the gold craze would have arisen from Oregon. Had Bret Harte and the others who have painted the picturesqueness of the early mining days of California taken their inspiration from the gold fields farther north, the impression which is now in the public mind might have been different. The Mackays, the Floods and the Fairs, who made millions in California, are known all over the world. The men who acquired their wealth in the gold fields of Oregon retired to enjoy their fortunes in privacy, building splendid homes, traveling about the world wherever they wished, giving of their surplus to help those who were less fortunate. But all this they did quietly and without ostentation. They are the unknown mining kings of the West, but kings nevertheless. And all the while the world was reading of the bonanza miners and their fabulous wealth.

The situation finds a parallel in other branches of American industry. There are those whose names are in every one's mouth, about whom something appears in every issue of the daily papers. Sometimes these men seek the notoriety which comes to them, while ostensibly they endeavor to avoid it. Sometimes they become conspicuous by accident, and, having once become so, they continue to be followed and watched and talked and written about. Some of them are presidents of great corporations, and of them it is told that they rose from the bottom by their own struggles. They are called "captains of industry," and they are feted and dined by Kings and Emperors. At the same time the papers and the people know nothing of the "unknown captains of industry," the other men who have by their own efforts organized and carried to success great industrial institutions, and men who sometimes have actually performed a vast part of the work for which some of the noted ones have received the glory.

HEAD OF PIPE LINE OF GOLCONDA POWER PLANT.

So it has been with Oregon. Recently, however, business enterprise has begun to appreciate the resources of this Northwestern State, resources which have not been developed because stories of them were not on the lips of every one. Although Oregon has been known for its lumber and grazing and agriculture, the State is in reality largely mountainous. The Cascade Range and Blue Mountains divide it into three principal sections, and these mountain ranges are rich in mineral. Gold, silver, lead, copper, iron, and coal are found in them, and the most profitable of these is gold.

The earliest miners in Oregon, like those in California, were placer miners, who worked individually or with a partner, panning out the gold by hand in the Oregon streams. The first miners who sunk shafts only followed the richest veins of ore, paying no heed to vast quantities of medium grade ore in which the richer veins occurred. A conspicuous example of this method was a mine that was located in the rich Cracker Creek district and near the great North Pole mine in Baker County, in the extreme southeastern part of Oregon. In working the mine a single vein of ore that was almost pure was found. The miners followed its glittering course feverishly, paying no heed to the immense bodies of low-grade ore that in the aggregate were much more valuable than the small veins of purer metal. The mine was called the Golconda, from the diamond fields of India, and also because from its very sound the word seemed to mean gold. In this mining district, as in others of the State, the next step was consolidation and the introduction of large milling plants to obtain from the immense bodies of low-grade ore the wealth that had been overlooked by the earlier miners, who followed only the glittering lenses of gold. The consolidated company did not base its expectations for profit on the discovery of any more such extraordinary ore bodies. Its engineers made their calculations solely on the low-grade deposits in sight, which were to be milled and refined and prepared for market.

They were surprised during their work last summer to

discover what seemed to be a continuation of the same vein that had made Golconda famous at first. The second discovery made as great a stir as the original one. It has been observed in other parts of this country, and in Mexico as well, that those who first developed mines often worked superficially, overlooking the profit that was possible, and abandoning their properties before the greatest wealth was reached. Miners were often forced to stop work on claims that promised well because their capital was exhausted and they could get no more.

These mistakes of the first miners are overcome now by the combinations of capital (in this as in other lines of industry) and by the invention of new machinery and the building of railroads and tramways. Fortunes have been made during last years from "tailings" and culm heaps of the earlier mines. This "waste rock" was formerly thought to be entirely without value, and was gotten out of the way in every manner possible. About the shafts of the larger mines there were hills of it. In one Western town the streets were paved with the "tailings" of old mines, and the paving was not unlike macadam. Then an engineer discovered that this pavement was rich in gold and if melted and refined by the new methods would yield many dollars to the ton and be extremely profitable. So here was an actual city whose streets were paved with gold!

Oregon is more blessed with the conditions of soil and climate that make living agreeable than many of the mineral States of the country. Its streams are useful, too, in furnishing power for the machinery of its mines. And in this connection the statement of Dr. Alfred R. C. Selwyn, late director-general of the Geological Survey of Canada, is interesting. Dr. Selwyn said:

"I find in eastern Oregon one of the most hopeful and interesting mineral sections of the globe. The formation, contour, climate, accessibility, timber, and water form a combination which tends to reduce cost of extracting gold to the minimum. And in addition I find the ores are less refractory and contain a larger amount of free gold, generally speaking; besides, they are softer and less expensive to treat."

In the present age of alert and enterprising men a condition like this, inviting investment and profit, does not long remain unaccepted. So there is an interest in the gold fields of Oregon amounting almost to the excitement of some of the earlier mining camps, but steadied by men who do not spend their money wildly, but wait to see the article before they make a purchase.

This great interest centres in the Cracker Creek district surrounding the town of Sumpter, in Baker County. Besides the Golconda there are other rich mines in this same valley, so that the prospects are that it will become one of the rich mining camps of the world.

And the publicity which follows will give to Oregon a new name among the States. As in other famous mining districts of the country, the wealth of the Cracker district of Oregon depends on a lode of rich ore extending unbroken, as can be seen by its outcroppings, a length of fifteen miles. It is like the Mother lode of California and the famous Comstock lode of Nevada. The renewed attention to the gold in Oregon has already started a cavalcade of miners and investors to that State, increasing the interest in all parts of the country.

MILLS AND OPERATING POINTS OF THE FAMOUS GOLCONDA GOLD-MINE IN OREGON.

**MY** READERS will give me the credit of having advised them, conscientiously and conservatively, of the stirring events which have at last come to pass in Wall Street. I said that the test of the market's strength would come when money became tight, and I predicted that the stringency in the money market would last much longer than usual and possibly be prolonged into the new year. The suddenness with which the Secretary of the Treasury came to the relief of the market and the extraordinary efforts he made to assist it were deeply significant of a perilous situation. It is not surprising that, with the public announcement that he can do nothing more, comes a new sense of apprehension regarding the possibilities of the future.

The financial writers who predicted that the returning flow of funds from the West and South would speedily relieve the situation, laughed at the idea of gold exports. They are now consoling themselves with the belief that money will be easier next year and that if we ship gold it will be because we can spare it. The readiness with which writers who have been boosting the market, in the interests of those who have had stocks to sell, can turn themselves, at every point, is surprising.

The most significant recent utterance in the financial world was that of Mr. Jacob H. Schiff, one of the brainiest of our active financiers. He made bold, in his address before the Chamber of Commerce, to publicly criticize the action of the Secretary of the Treasury, in accepting municipal bonds as collateral against government bank balances. Mr. Schiff is right in saying that the Secretary has established a dangerous precedent. I pointed out the fact weeks ago, that Mr. Shaw's action was absolutely illegal. The fact that he has revoked his

order shows that he realizes the gravity of his error.

That the money market is still in a perilous situation is also shown by the agreement of several of the leading banks not to make any more time loans at less than six per cent. This means that there can be no more wild bull speculation and no more exploiting of new syndicate propositions, because the money will not be forthcoming to permit such things. The recent upset of the United States Shipbuilding Company and the failure of the Republic Trust Company to finance it, means a great deal more than most people understand. Among the directors of the Trust Company of the Republic are notable men on Wall Street, including George J. Gould, Stuyvesant Fish, and James H. Eckels, and among the underwriting syndicate for the bonds of the shipbuilding company were Charles M. Schwab, E. H. Gary, and John W. Gates. It must be hard times when such noted men find it necessary to let go of any of their projects.

I do not expect easy money and rising prices in the stock market until the liquidation is completed. Throughout the year events, as well as conditions, have favored the bears. It has been inevitable that the market must react and prices fall to a lower plane. The bubble has been pricked and some of the air has escaped, but there must be a complete collapse before the end is reached. At present there is a general lack of confidence in the situation, and it will be a long time, in my judgment, before this confidence will be restored. It was but a short time ago that many of my readers questioned my judgment regarding the outlook, but I have every reason to know that the advice I gave saved them from heavy losses.

The drop in United States Steel common justifies all that I have said about this inflated corporation; and the drop during the past few weeks all along the line, ranging from \$4 to \$40 a share, shows how quickly market conditions can be reversed, even in the face of a public proclamation of widespread prosperity. The banks realize that, with the opening of the new year, heavy disbursements must be made, business settlements completed, and operations

either curtailed or extended. They are wisely in preparing at this time to meet whatever may happen at the critical New Year's period. If I am not compelled to chronicle the failure of some of the greatly over-capitalized industrial schemes, or a breakdown of some of the heavily inflated syndicates, I shall feel it a source of congratulation.

"R." New York: Will make inquiries.

"T." Albany: Leave it alone at present.

"Clericus," Chicago: No quotations available.

"C." Wilmington, Del.: One dollar received.

You are on my preferred list for three months.

"De L." New York: The present is a bad time

to exploit new inventions. I certainly do not

recommend the parties you name.

"N." Bridgeport: I do not regard the stock

of the International Finance and Development

Company as safe as a first-class bank stock.

"S. O." New York: I have no doubt that

both Union Pacific common and Canadian Pacific

will sell lower before the liquidation is complete.

"S." New York: American Ice Company a

year ago announced that it proposed to go into

the coal business. It is doing nothing in it now,

I am told.

"D. N. J." Paterson, N. J.: In such a market

money is often made on sharp, quick turns, by

watchful operators, who wait for signs that indicate

a large interest, on the covering of which a

temporary advance always may be expected.

"L." Baton Rouge: I have not believed in

United States Steel preferred as an investment,

but do not like to advise you to sacrifice the shares

at a loss. Unless the liquidation ceases shortly,

however, it must decline with the rest of the market.

"Arrow," New York: One dollar received.

You are on my preferred list for three months.

(1) That is the expectation. (2) No statement

upon which I can rely is obtainable. (3) Some of

the strongest financiers on the Street are talking

very favorably of it.

"Helena," Mont.: The continuance of tight

money followed by business depression would affect

the iron and steel trade and seriously affect the

earnings of the United States Steel Corporation.

I would sell my stock whenever I could get out

without too heavy a loss.

"R." Brooklyn: Strong parties advised the

purchase of United States Realty common when it

was selling considerably higher. A report that

the underwriting syndicate had not been able to

take up the stock depressed it severely. I only

regard it as a speculation.

"Soup," Danvers, Conn.: The liquidation in

Southern Pacific has been due largely to sales by

a pool that expected to advance it to par. The

road is earning dividends, but insiders only know

whether dividends will be declared. If that is the

intention, the stock is a purchase. If not, it is

not yet down to its proper level.

"C." New York: One dollar received. You

are on my preferred list for three months. I have

always thought that a fictitious price was placed

on Louisville and Nashville by the Western specu-

lators who exploited it, but Morgan interests ac-

quired it at higher than market prices, and they

are expected to protect it in a reasonable way.

"L." Providence, R. I.: The failure of the

Central National Bank of Boston was regarded by

many as significant of the precarious conditions

of some other financial institutions. Heretofore have been made of late to keep from the fact the condition of these. Realizing these facts have for some weeks advised my readers to out of the market.

"M. A. N." Greenwood Lake: (1) The cost of the road are large. (2) It depends upon much it is in demand by other roads, to which would be of great value. (3) Yes. (4) The sector would probably give you better prices than I can. (5) I do not advise the purchase of the Consolidated Tobacco Co., excepting speculation. They are not a bond in the sense of the term, as the preferred stocks are of them. Colorado Southern Co. are not an investment security. (6) Communicate with the office of the company. No quotations available.

"Q." Harrisburg, Penn.: (1) It looks as if fight between the Pennsylvania Railroad and Western Union was to be only equaled in I news by the fight between the Pennsylvania and the Wabash. A struggle between such great entities will not be helpful to the market. (2) are no signs of cheaper money. The fact San Francisco has been drawing on New York funds again points to one of the dangers of Wall Street situation. The Street is burdened obligations both at home and abroad, and demands are made for the payment of these loans something must give way.

"H." Hagerstown, Md.: (1) I would not rifle my Long Island stock. On sharp decline is a purchase for a long pull. (2) I have no idea that there have been discussions in the management of United States Steel. The retirement several of the directors during the past year evidence of this. Some of these are preparatory to the iron and steel trade in opposition to the trust. The recent decline in the Steel shares show a shrinkage of over two hundred million dollars. This is an enormous sum, it must be remembered that the concern has a billion of stock and a third of a billion of bonds has always looked unwieldy and top-heavy.

"H." Chicago: (1) American Biscuit and all the other industrial preferred shares suffer, in case of panic. The safest purchase probably be an investment bond, but this I leave you only a little more than the interest by a savings bank. Why not put your money in bank, at interest, and hold it ready for a chase when the market reaches a new low? (2) The Union Pacific Convertible 4s are an excellent bond and around par ought to be a purchase. (3) The Rock Island stocks are such in propositions that I do not regard them with I do not find you on our subscription list a rates, and you are therefore not entitled to a on my preferred list.

"D." Burlington, Ia.: (1) The wholesale value in the wages of its 175,000 employees Pennsylvania Railroad, followed, as it has by similar advances by the Reading and the Erie and Ohio, it is understood, was intended head off a general railroad strike, which, a juncture, would be a death blow to the market. Fear is expressed that this advance only stimulate a demand for a similar increase of wages on all the railroads throughout the try. If so, troublesome times are ahead. (2) St. Louis and San Francisco is said to be as an outlet by extending its line to the Atlantic coast around Savannah. The Chicago and Western is pushing its line in various directions the Northwestern and Rock Island are both to be getting ready to build to the Pacific, it is goes. All these things mean the employment vast sums of money. I cannot see how it is able to carry out such schemes while the market is in its present condition.

COFFEE PUTS UP A GRAND FIGHT.

AMONG the best of judges of good things in the food line, is the groceryman or his wife. They know why many of their customers purchase certain foods.

The wife of a groceryman in Carthage, New York, says:

"I have always been a lover of coffee, and therefore drank a great deal of it. About a year and a half ago, I became convinced that it was the cause of my headaches and torpid liver, and resolved to give it up, although the resolution caused me no small struggle, but Postum came to the rescue. From that time on, coffee has never found a place on our table, except for company, and then we always feel a dull headache throughout the day for having indulged.

"When I gave up coffee and commenced the use of Postum I was an habitual sufferer from headache. I find myself entirely free from it, and what is more, regained my clear complexion which I had supposed gone forever.

"I never lose an opportunity to speak in favor of Postum, and have induced many families to give trial, and they are invariably pleased with it." Given by Postum Co., Battle Creek, Mich.

## Jasper's Hints to Money-makers.

Continued from page 521.

"M." Pittsburg: Thank you.  
"A." Allegheny City: I will make inquiry.  
"G. M. M." Newport, Ky.: All highly speculative.  
"B." Allentown: I would keep out of the market at present.  
"B. M." Toronto: Two dollars received. You are on my preferred list for six months.  
"G. W." Milwaukee: As I read the figures last submitted the statement is not entirely correct.  
"C." Ottawa, Canada: The liquidation will not be over until the stringency in the money market is relieved.

"McE." Boston: Wheeling and Lake Erie is a much better property than it was a year ago, as its earnings show. The preferred issues, on a lower level, would be quite safe.

"H." Big Stone Gap, Va.: In the present temper of the Street new propositions are not looked upon with favor. A year ago something could have been done with it.

"C." Buffalo: I would not recommend any of them, unless you are looking for a pure gamble with the chances decidedly against you. The second on your list has the best outlook now.

"R." Providence, R. I.: I do not expect that you will have a profit in the next four weeks, unless the entire current of business on Wall Street suddenly changes. I would sell at the first good opportunity.

"J. H." Chicago: Your insurance inquiry should have been addressed to "The Hermit." I have referred it to him. The stock of the oil company which you mention has no quotable value in New York.

"T. T." Swisshale, Penn.: All such propositions have a highly speculative quality. They must not be regarded in the light of investments. Many things may happen in seven years, a revolution in Mexico included.

"X. Y. C." Buffalo: Two dollars received. You are on my preferred list for six months. This is a bad time to embark in a new railroad enterprise, and I do not advise the purchase of the shares of the Alaska Central Railroad.

"R." Brooklyn: (1) Glad you profited by my advice. (2) On a lower level I think well of Des Moines and Ft. Dodge, though it sold last year as low as 18. If it ever approximates that level again, you can buy it with safety.

"W." Ogdensburg, N. Y.: The annual report of the American Maltine Co. shows a net surplus of \$125,000, or about \$60,000 less than the surplus earnings of the preceding year. The rise in barley, without a corresponding rise in malt, is responsible for the poor showing.

"J. C." New York: (1) Missouri Pacific is regarded as a pretty substantial property and, on recessions, is being picked up for investment. Your margin is unfortunately light, however, and, unless you are able to protect the stock, it would be wise to sell on the first reasonable rise. Advise with your broker regarding the privilege.

"G." Naaman, India: (1) Reply was sent by letter. Real estate is not so much in demand as it has been. Better wait. (2) I was not responsible for the favorable article. I only am in charge of the financial department of LUSTAN'S. The opinion I gave I still hold. (3) I do not advise the purchase of the Palisades Park property. (4) The government never embarks in private enterprises. Leave the wireless shares alone.

"P. S." Omaha: (1) The liquidation in the steel trust shares, unless checked, is likely to become serious, because of the enormous capitalization. This fact leads many, even though they have a loss, to hold it, because they believe that Morgan interests will be compelled to sustain it. I should not hold too long. (2) I am not advising purchases at present, though Missouri Pacific, after a bad break, will be a purchase.

"N." Washington: One dollar received. You are on my preferred list for three months. (1) It is regarded as sound. (2) Manhattan Elevated sold last year as low as 83 and as high as 145, and is probably a safe purchase at an average between these prices. It pays dividends and has, therefore, an investment quality. Toledo, St. Louis and Western, and Kansas City Southern, are more speculative, but have merit. Would not buy until the market is more settled and the outlook clearer.

"G." Seneca Falls: (1) All the stocks you mention will sell lower, unless the money market finds relief before the first of January. That is the impression of leading financiers. (2) I would rather have a low-priced railway, like Toledo, St. Louis and Western or Kansas City Southern for a long pull, than United States Steel common, though the latter is paying dividends. (3) The safest of the Erie stocks is the first preferred, but I would not advise purchases at present. (4) If efforts to advance the steel shares are not more successful in the future than they have been in the past, the outlook will continue to be unfavorable.

"R." Troy, N. Y.: (1) The suit of the Pressed Steel Car Company against the American Car and Foundry Company is for \$100,000 for alleged patent infringements. The earnings of Pressed Steel Car are large, but this very fact is stimulating strong competition. (2) The talk of utilizing Erie as an outlet for the Great Northern system, by the extension of the Pere Marquette through Canada to Buffalo, is all in the air as yet. (3) No doubt the delay in securing a favorable decision in the Northern Securities case has postponed, possibly indefinitely, a number of projected deals, on the expectation of which prices were recently advanced.

"G." Galveston, Tex.: (1) A striking evidence of the turn of the tide in trade is revealed by the decrease of \$4,225,000 in exports of general merchandise from the port of New York during one week in this month compared with the previous week, and a decrease of \$2,500,000 compared with the corresponding week last year. (2) If I held Southern Railway stock I would not permit Mr. Morgan, or any one else who wanted to control the road, to close the transfer books against me, or to force me into consenting to an extension of the voting trust. If the holders of the non-assented shares will combine and demand their rights they will get them.

"W." Chicago: (1) The Minneapolis, St. Paul and Sault Ste. Marie is earning, but not paying dividends on the preferred. It is making an excellent showing, but I am adverse to purchases of anything until there has been general liquidation in the market. (2) I would not sell it short, in view of the new organization of Rock Island. There is little of the old stock outstanding, probably, and that will have to be bought in, probably at advancing prices. (3) The short side of the market is getting to be more popular with leading traders, especially for a long pull. (4) Ditto. (5) I agree with you that Consolidated Lake Superior preferred offers better prospects than most of the preferred stocks of our iron and steel concerns.

"R." Seattle, Wash.: (1) Adverse criticism of the American Smelting and Refining Company has been caused by the revelation that, while paying 7 per cent. on the preferred, it allowed a floating debt to accumulate. (2) The fiscal agent of the Goldens Consolidated Gold Mines Company tells me that an immense body of low-grade ore is being worked, and that by the erection of an additional mill the capacity of the company can be largely increased and the payment of dividends resumed on the first of March next. Lee S. Oviatt, the fiscal agent, has his main office in the Merrill Building, Milwaukee, and offices in New York, Boston, Minneapolis, St. Louis, and Pittsburgh. He will be glad to give you any additional information that you may require.

"G." Denver: The Osgood interests in Colorado Fuel, having whipped out the Gates crowd, are now opposing the Gould-Harriman-Hawley railroad combine. I would not buy into a lawsuit. (2) The annual report of Manhattan Railway is favorable. I would not sacrifice my stock. (3) Cautious investors purchase high-priced investment stocks and hold them for just such opportunities of profit as they are about to get from the Chicago and Northwestern by the distribution of its new stock at par. Similar distributions have been made at intervals by the U. G. I. Company of Philadelphia, St. Paul, Pullman, and other investment concerns, and a similar one is expected by the Consolidated Gas Company in due season. All such stocks, bought during panics and held long enough, eventually pay well.

"V." Burlington, Vt.: (1) Suit has been brought to prevent the carrying out of the Amalgam reorganization plan. This whole affair smells bad to me. (2) When the International Steam Pump Company was organized, one of its promoters told me that it was highly over-capitalized and full of water, though the stock has since been manipulated for an advance. The company, in the suit recently brought against Henry R. Worthington, to recover \$1,200,000 worth of stock, alleges that it was issued to him without consideration. This is proof that the watering process was carried pretty far. (3) The recent statement of United States Steel earnings gave nothing but a few details, and was, therefore, not satisfactory, though it purported to show that the current net assets had increased, as compared with a year ago, over \$13,000,000. How much should have been charged off for depreciation is not revealed.

New York, November 20, 1902. JASPER.

### Our Greatest World's Fair.

JUDGING FROM the first formal report of work accomplished, the managers of the St. Louis Fair have made commendable progress in the duties committed to their hands. The amounts now set aside for the various departments or features of the exposition are generous enough to insure their completion on a magnificent scale. For grounds and buildings, \$2,500,000 has been added to the original \$5,000,000 devoted to this work. Foreign exploitation has received \$150,000, domestic exploitation \$75,000, and press and publicity \$120,000. To the division of exhibits has been accorded \$200,000, and to the division of concessions and admissions \$25,000. The fact that the first building to be dedicated on the grounds was that devoted to the press is not without its special significance. The success of this fair, as of the others, must depend largely upon the press of the country, and no one appreciates this fact more, we are sure, than the directors at St. Louis.

Mrs. Style—"I want a hat, but it must be in the latest style."  
Shopman—"Kindly take a chair, madam, and wait a few minutes: the fashion is just changing."

# Advertising Writing as a Money Making Business

## And How It Is Taught by George H. Powell

### Skill Acquired by Mail Instruction in Demand At Incomes Ranging from \$100.00 to \$500.00 a Month

It has been suggested that I tell the readers of *LESLIE'S WEEKLY* something about the inducements offered in the field of advertising writing to young men and women who are willing to prepare themselves for the work. This space, however, is too limited to enter into much detail, and a few facts must suffice.

In the first place, we must consider that modern advertising dates back only about a dozen or fifteen years, previous to which time a catchy advertisement was practically unknown. In those earlier days the great department store used a column ad., where to-day a page is found necessary. And as the advertising expenditures have doubled and quadrupled, the volume of business has more than kept pace with this ever-increasing outlay.

A dozen years ago a mere handful of men occupied recognized positions as advertising managers, while to-day there are probably three or four hundred, and yet it is a very small army—much too small, and altogether out of proportion to the wonderful increase of the advertising appropriations. The demand for good ad.-writers cannot be met, and this condition must of necessity exist for years to come. In fact, like all comparatively new arts, the art of ad.-writing lacks skilled workers. A young man or woman possessed of a common-school education can, under proper instruction, added to reasonable diligence, finally be sure of a weekly salary of \$50.00. Those who draw from \$4,000.00 to \$15,000.00 annually are the picked workers, and yet positions at these high salaries are steadily multiplying. There will always be this "something better" to strive for.

To show how utterly out of proportion are the present salaries paid advertising writers and managers, a comparison will be of interest. With over 200,000 miles of steam railway in the United States, employing 1,000,000 men, the combined earnings for 1901 were \$1,500,000,000, while salaries reached the enormous sum of \$600,000,000. Now the total amount spent for advertising in the same year was nearly half the earnings of the railways, but the salaries paid advertising men and women were so small as a whole that comparison is useless, since it does not amount to one per cent.!

Conservative authorities agree with me that nearly one-half of the money spent for advertising is wasted, for want of proper attention and service, while nearly seventy per cent. of all the new advertisers drop out of the race for the same cause! Is it any wonder, then, that high salaries await bright people who have been trained to attract attention and create business?

I established my school at the urgent suggestion of notable advertising men who saw the need of really expert instruction. There were other ad. schools in existence; but, like all new things, only limited results were produced. Fulton built the first and original steamboat, but it is hardly to be compared with the 1902 ocean greyhound. To-day the Powell System is recognized by all authorities as the standard and best.

The chief fault of the early ad. schools lies in lack of understanding as to limitations, and instead of loading up students with superfluous news and detail about matters really foreign to the duties of the ad.-writer, the concentrated efforts ought to be along the line of the actual writing of ads. In this way, largely, is the Powell System superior to all others. Take the synonym question as another example: I supply a work of nearly 600 pages, instead of dabbling in three or four so-called "lessons" that are of no practical value. The Powell System proper—by which I mean the actual correspondence instruction itself—consists of lessons on all lines of ad.-writing, and following the student's work comes my personal criticisms, corrections, etc. No books are used in this main branch, because it is not practical or beneficial. *Printer's Ink*, the well-known journal of advertising, in commenting recently on a large book, or so-called "encyclopedia," offered by an ad. school, truly said:

"Students from the rural districts will find —'s Publicity the nicest book for drying and pressing flowers that ever happened. It is a great thing in itself. It is a greater thing to accomplish a distribution of the edition."

The Powell System differs from book instruction in that I personally supervise and direct each student's advertising education as he or she requires, and no form letters for criticisms are ever used. What books I do furnish are for a supplementary purpose.

On this page I reproduce several specimens of fine ad.

**Garter Ink Ad. by Samuel Mosser, Reading, Penn.**

E. Anna Roe, Monroeville, Ohio, writes:  
"I decided to take the Powell System of advertising instruction only after very carefully examining the circulars of several ad. schools."

"The dignity of expression, brevity and straightforward point-of-view of the Prospectus indicated a school of high order. I have found the instruction to be all that is claimed for it and more — comprehensive, practical, and interesting. Almost unconsciously the student is led on to his best efforts, and pertinent criticisms correct all mistakes."

John Clugston, Catawugua, Penn., writes:

"I have been under your instruction through your mail course in advertising writing for some months, and am greatly gratified with the results. I have found it a mine of information, pleasingly and plainly presented. There is a tone of personality to the criticisms of returned work that cannot be doubted in its sincerity for the welfare of the student. I believe the course is a help to anyone who will honestly try to help himself through it."

Charles W. Greene, 137 Northland Avenue, Buffalo, N. Y., writes:

"I am very much pleased with your system of ad.-writing instruction."

"I have not yet completed the course, but am perfectly satisfied with the progress I have made thus far. Under your guidance the work is very pleasant, and I await each lesson with increased interest."

work by my students, who are taught originality to such a high degree that they become prize-winners and valued employees in the shortest possible time.

Samuel Mosser, 611 Washington Street, Reading, Penn., writes:  
"Under your course of instruction I have developed a clear idea of good advertising, and a forceful way of expression."

"There is not a dull lesson in the course. Advertising is interesting; under your direction it becomes fascinating."

"Your good judgment in display of type, border and illustrations, makes a valuable impression. No student going through the course thoughtfully can fail to be greatly benefited."

J. M. Kemper, Dayton, Ohio, writes:

"I am very much pleased with your course in ad.-writing."

"I have derived a great deal of benefit from the lessons I have taken, which become more interesting each week. I can recommend your course to any one who wishes to learn the art of ad.-writing."

"I feel sure that the Powell System is all that it is represented to be, and I can heartily recommend it to any one wishing to take an interesting and profitable course of study."

**Shawmut Soap Ad. by J. M. Kemper, Dayton, Ohio**

My instruction system is so superior to all others that I always court investigation by giving full addresses to all testimonials I publish. The more skeptical you are the better I am pleased, because I have bushels of proof to finally convince you. Suppose you write those students whose portraits appear above? Or, if you are a hard-headed business man and wonder whether I am really an expert, you may be interested in the testimony of the Secretary of the Severne Wine Company, Himrod, N. Y., who says that my instruction and advice increased his business about four-fold, by actual test. I will gladly send you his letter, together with my complete and instructive Prospectus and full explanatory matter, if you will only write me. My address is George H. Powell, 158 Temple Court, New York.

#### ADVERTISERS SUPPLIED WITH COMPETENT HELP FREE

Advertisers in need of good ad.-writers should write me, as I make it a point to supply talented experts free of cost. Graduates whom I recommend are fully competent, and are in constant demand.

womanhood and to their graves under the shadow of their unknown origin. There are those, of course, who may never learn that they were foundlings; but in most cases guardians feel that their charges should be told the truth. Letters come frequently to the city officials from men who know that they were foundling babies. They ask to be told all that is known of their origin. The Department of Charities looks over the books and finds a record on blank No. 30 for lost children, and that is all that is ever known.

## RHEUMATISM Cured Without Medicine.

9,000 Persons Testify to Complete Cures by this Wonderful External Remedy Last Year.

Trial Pair FREE on Approval to Anybody. Try Them.

The Drafts cured Mrs. W. D. Harriman, wife of Judge Harriman of Ann Arbor, Mich. They cured Carl C. Pope, U. S. Commissioner at Black River Falls, Wis., of Rheumatic Gout.

They cured severe rheumatism of the arms, neck and back, for T. C. Pennington, Jackson, Mich.

Mrs. Caspar Vahrsdorfer, Jackson, Mich., 70 years old, was cured in a few weeks, after suffering 30 years.

The Drafts cured James Gilbert, Locomotive Dept., Mich. Cent. R. R., Jackson, Mich., after 27 years of pain.

They cured Dr. Van Vleck, Jackson, Mich., and he is now using them in his practice.

Letters from these persons and many others are reproduced in our new booklet on rheumatism—also sent free with the trial pair of Drafts.

Send no money—we only ask your name—and we will send you, prepaid, a pair of the celebrated Magic Foot Drafts, which have cured thousands of the most unfortunate rheumatic sufferers in the world. If you are satisfied with the relief they give you, then send us One Dollar. If not, don't send us a cent. We know there's comfort and happiness in every pair, and we want you to have them; that's why we are willing to take our pay after the work is done.

The Drafts are worn on the sole of the feet, because the circulatory and nervous systems are most easily reached at this point, but they cure rheumatism in every part of the body by drawing out the poison from the system. Try them—Free. Write today to Magic Foot Draft Co., R222 Oliver Building, Jackson, Mich.

## 33% Dividend

paid by the Mexican Plantation Association, 1609 Title and Trust Building, Chicago, Ill. Oldest of its kind in Mexico. ESTABLISHED 1897. Has 6,000 shares, or acres, planted to permanent crops, rubber, coffee and vanilla. The Association's contract is like an insurance policy—in case of death the money is refunded. 38 deaths have occurred since 1897. These shares will now be resold. ## Business Chances Abroad

A GERMAN trade journal gives some valuable hints to exporters to Siam, and says, among other things, that illustrated and handsomely gotten up catalogues and price lists have only an ornamental value for the Oriental. The latter wishes to convince himself personally of the quality of the goods he buys, and exporters who take this into consideration can expect to do a large and profitable business with Siam, while those who rely on price lists or traveling salesmen with samples can do business only with great difficulty. As regards the packing of goods, the report says that articles must never be put up in paper. Pharmaceutical and chemical products must be packed in glass or tin and then bedded in sawdust. For other goods, wood shavings are preferable, because sawdust is apt to escape through holes of the inclosing material. Special care must be devoted to the packing of breakable articles. Textile goods should always be baled and covered with water-tight material, and the bales be bound by iron bands. Articles which rust easily, such as bicycles, should always be packed in wooden cases, lined with zinc and well soldered.

A highly interesting and suggestive report has been compiled by Mr. Frank H. Hitchcock, chief of the division of foreign markets in the Department of Agriculture. The United Kingdom of Great Britain is the principal market for the surplus agricultural produce of exporting countries. The report says that the products of agriculture sent to that market from all sources in 1900 reached the enormous value of \$1,578,000,000, forming 62 per cent. of the entire import trade of Great Britain and Ireland. In the five years mentioned the annual average value of the imports into the United Kingdom was \$2,308,174,441, of which \$1,458,921,776, or 63 per cent., was agricultural, and \$849,252,665, or 37 per cent., non-agricultural. To this extraordinary import trade in agricultural produce the United States was the principal contributor, furnishing about 33 per cent., or nearly one-third, of the supply. Mr. Hitchcock predicts that the greatest future development of American trade in the British market may be expected in perishable products, exportation of which is made possible by modern transportation methods. France is the chief competitor of this country in supplying farm produce to the United Kingdom, the agricultural imports from France aggregating \$103,000,000 in value in 1900.

Providing Congress at its coming session makes some provision for the encouragement of our shipping interests, a large and profitable market for American goods of all grades may be established in South America. Our consular agents in all parts of that country are reporting that unusual opportunities are now open for pushing our products. There is a great future in northern Brazil, it is said, for American machinery and machinery tools, and the field is almost unlimited. It needs only right business methods and thorough knowledge of the country and its needs to build up an enormous trade there in this line. American saw-mills and milling machinery are rapidly growing in favor, and there seems to be a fine field for this line of goods. The same is said of American ship machinery, tools, and marine supplies. American electrical machines, since erected in Brazil, are found to require less fuel and attention, and to give far better satisfaction in every way than the European ones.

Electricity in all its many varied and ever-increasing uses and applications is not only creating a great demand for electrical machinery in the United States, but in all

parts of Europe as well. In Germany, for example, more than half the steam engines and turbines turned out are used for driving dynamos. In other industrial branches electricity has acted as a stimulus, offering new problems, in the solution of which Germany is taking a prominent part. That country is, in fact, marching side by side with the United States in this respect, and is without question our greatest competitor, not only in supplying electrical machinery to the different nations of the world, but also in devising new inventions. If we inquire how German electrical engineering came to gain such a leading position in the world's markets, we discover that the principal cause is the profound scientific training of the German engineer. In the works of the principal German companies there are about 1,950 engineers employed who have received their training at the technical universities of the empire.

Writing of the electro-technical industry in Russia, Consul Heenan, at Odessa, says that the demand for electro-technical apparatus and machines in Russia is relatively but little satisfied by the home manufactures, and the progress in the application of electricity for transportation, manufacturing, and domestic economy will undoubtedly enormously increase the market for foreign appliances. American manufacturers should have their share of this trade, and there is but one way to secure it—that is, to establish branch houses in Russia and place the same in the hands of competent men.

The "ill wind" of the late war in South Africa blew some "good" to America, at least, in the way of increased trade during the course of that unhappy conflict. An immense amount of material required to carry on the war, including horses and mules, was shipped from the United States. But now that the trouble is over and trade is resuming its normal conditions, our commercial representatives need to bestir themselves if they would hold their place in the South African markets. This, at least, is the opinion of Mr. W. R. Bigham, our consul-general at Cape Town. Many farm-houses in the Transvaal and the Orange River Colony have had their thatched roofs burned, and will have to be re-roofed, probably with galvanized iron, a material much used for this purpose. It will also be necessary

## YOUR FUTURE

IS LIKE AN OPEN BOOK. If every one knew exactly what the future held in store he could govern himself to bring about the best results. Astrology, when intelligently practiced, reveals the future and tells one what to do and what not to do. Undoubtedly the greatest living astrologer is

**DR. DEROLLI,**

of Boston, Mass. He has become so proficient in his great study that facts which seem almost supernatural are as but an open book to him. One's life holds no secrets. Every movement, in matrimony, speculation, health, position, society, and all are clearly and truly deciphered. It was Dr. Derolli who predicted the assassination and death of President McKinley, the defeat of Bryan, the rise of Roosevelt to the Presidency, the Spanish War, Dewey's victory at Manila, and hundreds of other National events now recorded as history. The Boston papers frequently appeal to Dr. Derolli for predictions on popular subjects—these are printed and invariably come to pass. One day last fall a woman called and stated that she wanted advice. "Well," said the doctor, "I would advise being careful of your right arm and shoulder. You are destined to meet with an accident in February." In March the same lady called again at his office with her arm in a sling. "Your prediction came true," she said. "While out walking at Palm Beach I fell and broke my arm." Another incident which shows Dr. Derolli's unerring insight: a man in Melrose, Mass., recently mailed to the doctor the dates of births of two persons requesting horoscopes. One was promptly made out and returned and to the other he simply replied—"This child died on May 15th, being but four years of age, with an uneventful life." A few days later a very grateful letter was received in response. The writer now revealed his name—that of a prominent business man, and stated that the child had died on that date, and was his son. The father is enthusiastic in his praise of the doctor's phenomenal work. Thousands of marvelous incidents have transpired in reading the lives of public and private men. People in all walks of life consult Dr. Derolli, and many would not do business, or make an investment or an important move without first having his advice. **LUCKY DAYS FREE.** In accordance with his custom the doctor has recently published the lucky and unlucky days for the next three months together with weather predictions which he will send to any address free of charge. He will also send a copy of his celebrated horoscopes of the late President McKinley and President Roosevelt. These are reproduced from the Boston Globe, which published them many months prior to the assassination. Send your name to-day to Dr. DEROLLI, Suite 820, Hotel Pelham, Boston, Mass.

essary for many of the farmers to purchase new agricultural implements, vehicles, furniture, harness, and food for man and beast. Every store will have to be restocked. In short, all enterprises will be started anew, and it will not be possible to get goods into the interior fast enough to meet the demand that will arise. All nations are awaiting this trade, says Mr. Bigham, and are preparing for it by establishing direct lines of ocean transportation—all nations except the United States, which, other than an occasional freight steamer, has no direct communication with Cape Colony. American enterprise should strive to secure a share of the trade.

### One Thousand Miles of Collars.

Continued from page 519.  
are exhibited some of the greatest triumphs of inventive genius. Here is a machine which sews buttons on a shirt at the rate of 21,000 buttons a day, and is operated by one little woman. Here is another machine used in making pleated shirts, which sews five seams at once. Another locates with mechanical exactness the position of a buttonhole in the centre of a collar. In all, a collar is six weeks in the factory, from the time the cloth is cut until the finished product is boxed and shipped.

Each year, scores of new brands are introduced, and to find unusual, individual, and "catchy" names for these is one of the problems of the collar business. Two firms might frequently hit upon the same name were it not for the clearing-house of names conducted by DeWitt Clinton, librarian of the Young Men's Association of Troy, who has on record the names adopted by practically all of the manufacturers. One concern has already exhausted all the names in the novels of J. Fenimore Cooper in giving titles to its collars. Another has adopted the names of all the known flowers. Another manufacturer has gone to England for his collar names.

And the collar business is constantly increasing. It varies somewhat with the general condition of the people and with the seasons. A hot summer means a large collar trade. But in spite of fluctuations the industry grows persistently, and, at the present rate, before many years are past the string of collars and cuffs made in Troy in a year will reach from New York to San Francisco.

The manufacture of shirts has naturally proceeded side by side with that of the collars and cuffs throughout these years, yet it is only recently that any particular effort has been made to design these articles with relation to each other. One of the largest factories in Troy has recently put out a line in which the neck-bands of the shirts and the lower edge of the collars are moulded to conform to each other, and the wristbands are made in proper relation to their cuffs. All three articles have been placed under the same trade mark, so that their relation to each other may be recognized readily. This is perhaps one of the most important developments of recent years in the collar industry, and the marvel is that so simple a thing was not embodied many years ago in a business where such large interests obtain.

### Of Interest to Architects.

THE city of Patras, Greece, has decided upon the erection of a church, to cost 2,000,000 drachmas (\$250,000), which will take the place of the present edifice dedicated to St. Andrew, erected early in the second quarter of the last century. With a view to securing something especially apt in design, the committee having the matter in charge has decided to secure plans through an architectural contest, and the announcement is made that contributions from American architects will be welcomed. The general order of architecture will be Byzantine, after the spirit of the East. The contest closes at twelve o'clock, noon, of February 13th, 1903. All who have successfully passed will be given one hundred and fifty days additional from the time the decision is rendered. The final plans will be submitted to some academy of the fine arts in Europe, and in accordance with its decisions the committee will award a first prize of 10,000 francs (\$2,000); a second, of 4,000 francs (\$800); and a third, of 2,000 francs (\$400). Particulars in regard to this competition may be had of the American consul at Patras, Mr. Frank W. Jackson.

For coughs and colds, the best remedy is Pico's Cure for Consumption.

### A Correct Definition.

"Who can tell me the meaning of leisure?" asked the teacher.

"It's a place where married people repent," replied the boy at the foot of the class.

Don't be cross; cheer up on a cold bottle of champagne, and let it be *Cool's Imperial Extra Dry*.

A woman never hits what she aims at unless she throws a kiss.

**Advice to Mothers:** Mrs. Winslow's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

Schmidt & Co., the great Piano firm, can point with pride to the magnificent endorsement their instruments have received at the hands of the best native and foreign musical artists.

### INFORMATION ABOUT GOAT LYMPH.

In response to a large and constantly increasing demand for information about the Goat Lymph treatment, we have issued a booklet that covers this subject in a comprehensive manner. It tells all about Goat Lymph; what it is, how it is obtained, how it is administered, what ailments it cures, and how sufferers from any of the distressing ailments in which the use of this remedy is indicated may obtain it.

Why Goat Lymph cures such ailments as chronic articular rheumatism, locomotor ataxia, epilepsy, paralysis agitans, hemiplegia, melancholia, hysteria, neurasthenia, primary dementia, senility, mental and nervous prostrations, and premature old age, is fully explained.

The subject is thoroughly discussed in an interesting way by physicians and former patients. The booklet will be sent free on application to the

## SULPHUME

Price, \$1.00, express paid

SULPHUME is pure sulphur in liquid form—a new chemical discovery. Sulphur heretofore was considered insoluble. Sulphume when taken internally, and applied as a lotion, will cure any skin disease.

SULPHUME BATHS can be taken at home, having all the advantages (and more) of the most famous Sulphur Springs. One bottle of Sulphume makes ten strong sulphur baths.

SULPHUME SOAP is the only soap in the world made with liquefied Sulphur. That is why it is a Genuine Sulphur Soap. It stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed soap, 25c. a cake; Unperfumed, 15c. a cake. Will mail trial cake upon receipt of price.

SULPHUME SHAVING SOAP is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

SULPHUME LITTLE LIVER PILLS act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

SULPHUME BOOK FREE—In it you will find solid facts about the care of the skin and blood.

Be sure this signature *M. A. Day* is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

## Presidents Who Saved Their Parties.

A FEW Presidents have been stronger than the parties that nominated them, and brought votes which could not have been gained at that time by any other persons who could have been selected. Such were Jefferson, Jackson, and Lincoln in both of their elections; such was Grant in his first canvass; such was Taylor; while Roosevelt's personal popularity as the vice-presidential candidate strengthened the McKinley ticket immensely in 1900, and his presidency gave the victory to his party in the recent congressional election. The triumph of the last-named statesman has been particularly noteworthy and sweeping.

Jefferson, despite his mistakes in attempting to fight England with embargoes and other sorts of trade restrictions instead of by raising an army and building up a navy, as Washington or Adams would have done, had hypnotized the country to such an extent that, near the close of his second term, even old Federalist strongholds like Massachusetts asked him to accept a third election. The popularity of that other great Democrat, Jackson, was so decided and emphatic that he was able with impunity to assail the Constitution and the laws in more places in a time of peace than Lincoln did in the midst of a civil war that threatened to subvert the government. Not only did Jackson hold the presidency two terms, but he also dictated the choice of his successor, Van Buren, and the latter was proud to intimate, in one of his messages to Congress, that he was governing the country on lines which Jackson laid down. Though Jackson provoked a schism in his own ranks and built up the party of the Whigs, he easily and overwhelmingly beat all the Whigs and seceding Democrats who antagonized him during his eight years in the White House.

Everybody now knows that Thurlow Weed and the coterie of Whig bosses who stood with him were right, from the viewpoint of party interest, in selecting the Mexican war hero, Zachary Taylor, for President in 1848, in preference to the old Whig leader, Clay. Weed and his cabal had two reasons for putting up Taylor—the desire to utilize his military record, and the fear that if they did not nominate him he would be appropriated by the Democrats. Taylor carried the country against the experienced and popular Western Democrat, Cass, while Clay, as the Whig candidate, probably would have been defeated. There can be no doubt that Lincoln was stronger in 1860 than Seward would have been, although Seward was far more prominent at the time. Greeley builded better than he knew in defeating Seward and in thus making Lincoln's nomination inevitable. In 1864 no other man would have been so acceptable to the country as Lincoln was.

As in the case of the Whigs and Taylor in 1848, it was a condition and not a theory that presented itself to the Republican chieftains in the case of General Grant in 1868. They feared that if they did not take General Grant at that time the Democrats would. Grant had been a Democrat before the war, and the Republicans knew one or two of the Democratic leaders (it is certain that Montgomery Blair, then back with the Democrats, did this) had been making overtures to Grant in this direction. Moreover, none of the regular Republican statesmen—Conkling, Blaine, Sherman, Oliver P. Morton, Garfield, or the others—was as yet sufficiently conspicuous to be singled out for the candidacy. Grant, by his brilliant military reputation, undoubtedly aided the Republicans greatly in the canvass of 1868, but the scandals of his administration, with which he himself, however, was not directly connected, hampered the party somewhat in the canvass of 1872.

Roosevelt's case is remarkable. Usually the vice-presidential candidacy is given as a consolation prize to a faction defeated for the presidential nomination, or to secure the aid of a doubtful State, or to gratify the pride of a section. The enthusiasm for Roosevelt, however, in the Philadelphia convention of 1900 was national and spontaneous, although most of the Republican leaders were hostile to him. His canvass through the West in that year was the most extended, enthusiastic, and triumphant which that section ever saw. His popularity as President turned the scale in sufficient close districts in the recent congressional election to give the victory to his party. As Senator Platt, of New York, has pointed out, Roosevelt's administration and personality were the

issue in the canvass of 1902, and they swept the country. Democrats as well as Republicans see and concede this.

Already there are Democratic leaders who say that if the Republicans should refuse to nominate Roosevelt in 1904 the Democrats will put him up. The popularity and power which Theodore Roosevelt has attained in the face of conditions which were seemingly adverse is a unique and almost inexplicable manifestation of the politics of the United States.

## Lady Somerset Is Right.

THE IMPRESSIONS of foreign visitors to our shores, and especially some of our English friends, have often been so much the reverse of flattering, that it is a genuine pleasure to record such an opinion as that expressed by Lady Somerset on the eve of her recent departure from America, to the effect that nothing here surprised her more than the sobriety of the American people. English women, in particular, she said, were much more given to drink than American women, and how to deal with this phase of the temperance problem was one of the most serious questions in England. More than four thousand women in London alone, said Lady Somerset, had been treated during the current year in the various hospitals and sanitariums of that city for alcoholism.

What our recent visitor has to say about the abstinence of Americans is not only flattering but, best of all, it is true. As Lady Somerset is an experienced leader and worker in temperance reform, has visited America frequently and studied conditions here closely along that line, her views are entitled to special weight. All who have traveled abroad, and especially in England and Scotland, must have been impressed with the alarming prevalence of the drink habit among the women of the towns and cities in those countries. It is no uncommon sight to see the public houses in London, Glasgow, and Edinburgh thronged with women drinking at the bar as freely and openly as the men.

The presence of women in these places and their drinking practices are encouraged, no doubt, to some extent by the fact that women are often employed as bar-maids in the public houses of England and Scotland, a feature of the drink business, we are glad to say, which has never been adopted successfully in this country. An attempt was made to introduce it here some years ago, but with all liberal ideas about such matters it was made evident at once that this was one English fashion at least that would never be tolerated here by law or public opinion, and it was soon given up. We are treated now and then to "startling revelations" in the sensational press about the increase of the drink habit among American women, but a pretty extensive observation of life in American towns and cities fails to furnish any confirmation of these statements.

No woman with any pretense to respectability is ever seen drinking at the bar of an American saloon, and a drunken woman on the streets or in any public place in this country is happily one of the rarest of spectacles. While we as a people have many social sins, and some peculiar to America, to answer for, we are thankful to believe that intemperance among women is far less prevalent here than in some other lands. One reason for this, among others, is that nowhere else in the world are women held in such high respect as they are in America and nowhere else are they treated with such deference and genuine courtesy. For this also we may be thankful, for there is no truer or better test of the civilization of a people than the attitude which they assume and hold toward womanhood.

## Two Towers of Tammany's Strength.

MANY explanations have been offered of the unexpected and amazing increase of the Democratic plurality in greater New York this fall, as compared with the result in the gubernatorial election of two years ago. Republican apathy and indifference may account in part for Tammany's enormous plurality, which rose from 43,000 two years ago to over 121,000 in the contest just closed. Democratic enthusiasm had behind it some unusually forceful and decisive factors. Two of these, according to ex-Collector Erhardt, were the twelve thousand saloon-keepers and the eight thousand policemen. It is calculated that each of the former was good for about five votes on the average for the Democratic State ticket, and that each of the latter was able to influence at least three votes on the average, in favor of the Democratic candidates. This means an army of eighty-four thousand votes, marshaled by two influences for personal and business reasons. Saloon-keepers want greater freedom in the sale of their commodities on Sundays, and the police, realizing what a reform administration means, are anxious for the speedy return of Tammany's blackmailing control in city affairs. It is no secret that the advocates of good government in New York stand aghast at the showing of Democratic strength just made, and it is not too early to point out that the two forces mentioned must be reckoned with in the municipal election of next year and that we had better begin to reckon with them now.

The organization of saloon-keepers should be met by the organization of the churches of New York, and the abhorrent power of the police should be minimized by the adoption of the most heroic measures at Albany, even by the passage of a State constabulary law, if that be found necessary. The success of Tammany Hall at the municipal election in 1903, and the consequent surrender of every department of this great city on the first of January, 1904, to the same political gang of freebooters that held sway under Croker, would be a public menace in a presidential year, and would do more to jeopardize the success of the national ticket in this great State than any-

thing else that could happen. The friends of President Roosevelt should bear this in mind and bestir themselves.

## The Plain Truth.

TRADE UNIONISM has never appeared in a worse light, to our knowledge, than in the action of a labor organization of Schenectady in expelling one of its members and causing him to be discharged from employment simply because he had been enrolled as a member of the national guard. The firm employing the man felt compelled to dismiss him, it appears, for fear of a strike unless they obeyed the demand of the union, but they accompanied their note of dismissal with a letter of recommendation saying that the man had been a skilled, faithful, and efficient employé and they had no fault to find as to his character or capacity. The action of the union in the case is stated to have been in accordance with "our rules as laid down in our national by-laws." If such a rule as this exists it is hard to see how it falls short of being criminal and treasonable in its spirit and intent; a rule in direct contravention of the laws of the land and the authority of our State governments. Such an exhibition of trade-union tyranny transgresses all bounds of decency and toleration; it is outrageous beyond words and absolutely indefensible. If no existing law reaches such cases as this our legislatures cannot frame one too soon.

WE ARE glad that there were sufficient practical and sensible business men in the New York board of education to veto the ridiculous proposition of some of its advisers in favor of the establishment of a municipal printing plant for that board. It is easy for an official to furnish attractive estimates of the probable cost of a plant and of the possible saving to the city by doing its own printing. But when this official mentions Boston as one of the cities which has successfully done its own printing, he speaks unadvisedly. A careful examination long since disclosed that the establishment of a municipal printing plant in Boston resulted, as it always will do, in greater extravagance and greater delay in public work than came from the letting of it to private contractors. The abuses which have grown out of the establishment of the government printing office at Washington are so notorious that they have become a stench in the nostrils of every one familiar with them. It is easy to see why Tammany Hall should favor the establishment of a public printing plant in New York, with all the opportunities it would afford for taking care, as the government printing plant does at Washington, of a lot of political hecklers and wire-pullers. It would be a sad outcome of the fusion movement in New York City if it should indorse and create such a scheme.

AFTER READING the detailed account from Smodes, Miss., of the bear hunt in which President Roosevelt was conspicuous, we almost wish that our strenuous-minded chief executive was not quite so fond of gore. The report of the slaughter of the first bear tells how the hounds trailed the poor creature through the underbrush and woods until he was about to fall exhausted. The account proceeds: "He ran into a water-hole and turned upon the dogs. They were all over him in an instant. The poor beast was too exhausted to make much of a fight, but it grabbed one of the hounds by the neck and crushed it through its spine, killing it instantly. As the bear was making a sweep with its paw at another dog, Holt Collier jumped from his horse and, clutching his rifle, knocked the game over with a blow on the head. A messenger was sent back for the President. Meanwhile Holt roped the bear and tied him to a tree. When the President arrived he would neither shoot it nor permit it to be shot. 'Put it out of its misery,' said he to Mr. Parker, and the latter ended its life with his knife." After this enjoyable diversion in Mississippi, the President may confidently expect invitations to the first grand bull fight that happens across the border, to the biggest cocking main in Havana, and possibly even to a dog fight in New York. We wish, for the sake of Young America, who places so much stress upon the conduct of our President, that the latter were a vegetarian.

IF SECRETARY SHAW can instruct customs officials at some of our ports to disregard the tariff on certain quantities of coal and to admit the cargoes as free merchandise, why should he not also provide for the free entry of Christmas boxes into the Philippines to soldiers and civil employes? We are advised from Washington that, for the first time since the insurrection in the Philippines, soldiers' gifts will not be allowed free entry into the islands this year, and that this decision has been reached by the Cabinet in obedience to the law passed by Congress, imposing duties on imports into the Philippines. This will not be very comforting news to the friends of the seventeen thousand brave boys in blue who, far across the seas, are fighting the battles of their country. We are not surprised to learn that Secretary Root was especially anxious to continue the custom inaugurated by President McKinley, of permitting the friends and relatives of soldiers to send their Christmas boxes by government transports, free of transportation charges and free of duties. Secretary Shaw has cut several gordian knots by setting the law aside in emergencies. It is time for him to get out his knife again. If the laws are to be relaxed for the benefit of our bankers and of American travelers abroad, let them be relaxed also for the American soldier. If Secretary Shaw cannot find a way to do it, let the President solve the difficulty. The Republican party, if political considerations are to be primarily considered, should bear in mind that the taxing of the soldiers' Christmas boxes will be utilized on the Democratic stump very effectively, as an argument against the policy of protection.

## PEOPLE TALKED ABOUT

WE HAVE seen an end of trying to convict a person of a capital offense on the testimony of handwriting experts," was the comment

EX-GOVERNOR FRANK S. BLACK.  
In characteristic attitude at Molineux trial.

of Mr. Bartow S. Weeks, at the close of the celebrated Molineux murder case in New York City. The verdict in this noted trial justifies the warning of Judge Woodward, of the Supreme Court, embodied in his recent article upon the unreliability of expert testimony. At the first trial of Molineux, on the accusation of murdering Mrs. Adams, conviction was brought about mainly by the evidence of so-called experts in handwriting. Recorder Goff, who ruled heavily against the prisoner, and District Attorney Osborne, who attacked Molineux with an almost unjustifiable bitterness, brought about the conviction which the Court of Appeals promptly set aside. No defense was interposed at the first trial, and the second trial was conducted on entirely different lines. Judge Lambert, a well-balanced, experienced judicial officer, presided, and a mass of testimony admitted on the first trial was promptly excluded, under the decision of the Court of Appeals. Ex-Governor Frank S. Black appeared as the principal counsel for the defendant, and the defense on the second trial became as combative and vigorous as the prosecution had been in the first. Molineux was accused of sending, with murderous intent, a package of poison to Cornish, his personal enemy. Cornish, believing the poison to be a harmless sedative, gave it to Mrs. Adams, to relieve her headache, and her death ensued. Molineux, as the suspected sender of the poison, was indicted and tried. Governor Black turned the case completely about in court, and charged the crime upon Cornish, basing his accusation upon the personal intimacy which he alleged existed between Cornish and Mrs. Adams's married daughter and upon cumulative circumstantial evidence. A more sensational development has never occurred in a murder trial. Black's arraignment of Cornish was so startling and terrific that the prosecuting counsel was compelled to prove Cornish innocent before he could undertake to prove Molineux guilty. The jury left the court-room for a moment, and came back with a unanimous verdict of not guilty. So great was the public demonstration of approval, that Governor Black was followed by a cheering crowd from the court-room and along the streets, until he had to take refuge in a street-car. No greater triumph has been achieved by any member of the New York bar, in many years.

IT IS sincerely hoped that the rumors of the possible retirement of Senator Hanna from the place in Washington which he has filled with such distinguished ability are unfounded. It is not too much to say that no member of the Senate, on either side, has proved himself to be more useful, not only to his party, but to the best interests of the country, regardless of partisan considerations, than Senator Hanna. His retirement would be an unmistakable loss to our highest legislative body. The senator who, by one speech, changed the attitude of Congress on the inter-oceanic canal question, is not an ordinary man.

IN NO part of the vast and ever-expansive British empire, outside of England itself, has the coronation of King Edward been celebrated with so much *clat* and on such a magnificent and extensive scale as it will be in the historic city of Delhi, the vice-royal capital of India. Here during the present month will be held a "darbar" at which all the ruling chiefs will be in attendance to render homage to the newly-crowned King and Emperor, officially represented at these ceremonies by his brother, the Duke of Connaught, and also by Lord Curzon, the Viceroy of India. Such a wonderful display and such a vast throng as are promised have not been seen in India for many years. It is said that forty thousand tents will be required to accommodate the people who will flock to Delhi from all parts of India. One notable feature of the camp will be a magnificent three-court polo ground, each court three hundred yards long and two hundred wide, the total field of play available being nearly forty acres. Not the least among the high-born men and women who will grace the

LADY CURZON,  
Viceress of India, formerly Mary Leiter, of Chicago.

occasion will be Lady Curzon, who before her marriage was Mary Leiter, of Chicago. Royal etiquette forbids that Lady Curzon should have any official status at this celebration, but she will stand at the foot of the Viceroy's throne with a duchess, in advance of all the other titled and official persons.

THAT A slight admixture of humor aptly introduced in the otherwise dry and formal proceedings of a government department does not necessarily detract from their practical value and usefulness was illustrated not long since in the official announcement by our genial friend, Commissioner Ware, of the promotion of a faithful employé of the Pension Bureau. Seven reasons were given for the advancement, one of these being that the appointee had "steered no statesmen up against the commissioner," and another that "he had not told the commissioner about his pedigree and distinguished relatives." As the announcement ends with the statement that "chiefs are requested to furnish the commissioner with the names of all others in the bureau with a similar record," it is probable that this "word to the wise" will be "sufficient" for others who are anxious for an uplift in rank and pay. A man too dull to take this hint is not fit for any position. Commissioner Ware is as original as he is popular and efficient.

THE EMPEROR FRANCIS JOSEPH was leaving the Church of St. Antonius the other day after attending the ceremony of consecration, when a lad dressed as a baker's apprentice pushed his way through the crowd, evaded the swarms of detectives, and ran right up to the Emperor's carriage, which was already in motion. He held up a letter which he wanted to hand to the Emperor, and Francis Joseph had the carriage stopped to take the missive. It ran as follows: "Dear Mr. Emperor:—My mother has been very ill for many years, and no hospital will admit her because she is an incurable. I can earn enough for myself, but I cannot earn enough to give my sick mother the things she needs. I beg you, dear Mr. Emperor, to order that she shall be admitted to some hospital." Two hours later (says the Vienna correspondent of the *Morning Leader*) an ambulance arrived before the lad's house and conveyed his mother to a charitable institution, where she can end her days in peace.

A STRIKING example of the Abraham Lincoln type of the American citizen is furnished by the Hon.

HON. WESLEY O. HOWARD,  
Of Troy, N. Y., the district school teacher who rose to the Supreme Court bench. — *Lloyd*.

Wesley O. Howard, the Republican candidate who was elected on November 4th as justice of the Supreme Court in the third judicial district of this State. Born of poor parents in South Troy, but raised in Grafton, a country district a few miles from Troy, N. Y., and left an orphan at an early age, he secured, during the meagre time left him by his farm duties, a sufficient education to become a schoolmaster in the district school, which he taught for several years, meanwhile improving his time by the study of law. He was eventually admitted to the bar of Rensselaer County and commenced the pursuit of his profession at Troy, where his clear judgment and natural aptitude for the law, combined with an unlimited capacity for hard work, marked him almost instantly as a man destined to become a leader of the bar. He became associated with ex-Governor Frank S. Black in the prosecution of the famous election-frauds cases in Troy, and the ability shown by him at that time, as well as later as district attorney of Rensselaer County, which office he has occupied for two terms, secured for him at the age of thirty-nine years a nomination for a place on the bench of the Supreme Court.

AS HIGHLY fitting as they were richly deserved were the honors and social courtesies extended to Mr. James H. Hyde on the occasion of a recent visit to Chicago. He was given a dinner at the Auditorium Annex and also a reception at the Quadrangle Club. At one of these receptions Mr. Hyde, speaking as president of the United States Federation of the Alliance Française, strongly advocated a greater exchange of traveling fellowships between the universities of America and France, a work to which Mr. Hyde has already given much of his thought, energy, and means, and from which many valuable results have already come.

IT WAS a pretty as well as an appropriate compliment which a wealthy philanthropist in central New York paid the other day to Mr. George W. Perkins, the well-known financier, when he caused to have printed upon a thousand rulers given away to school children the following quotation from Mr. Perkins: "Too many young men in this country don't want to work hard. They prefer to take things easy, stay up late at night, and lie abed too long in the morning. They never can get ahead that way. Time and conditions may change, but the old rule remains the same, that there is no success without keeping everlastingly at it." Wiser words to keep before the eyes of American boys and girls could hardly be found than these. It will be remembered that Mr. Perkins has come up to his present high and commanding position in the commercial world from one of the humblest and lowest positions in the ranks. He was once an office-boy to a member of the firm of J. Pierpont Morgan.

PERHAPS NO private citizen of this country has done more to promote pleasant relations between the United States and France than Mr. James H. Hyde, first vice-president of the Equitable Assurance Society, and founder and president of the Alliance Française. The chief object of the latter admirable organization is to bring the peoples of the two republics nearer together, and in this noble effort it has had the warm sympathy and help of M. Jules Cambon, its honorary president. M. Cambon has long been the French ambassador at Washington, but is about to be transferred to Madrid. In ability and tact he compares favorably with the foremost of the distinguished foreigners who have filled official positions at our national capital. He has steadily sought to strengthen the ties of friendship between his own land and ours. In this he has succeeded greatly, and as he is about to depart from our shores, possibly never to return, it was fitting that he should receive some notable testimonial signifying the esteem in which Americans generally hold him. This tribute came in the shape of a superb banquet at Sherry's, in this city, on the night of November 15th. The hosts of the occasion were Senator Chauncey M. Depew and Mr. James H. Hyde, and the guests, two hundred and sixty in number, included many of the nation's eminent financiers, divines, statesmen, jurists, and journalists. Six Governors of States, two Cabinet officers, and nine college and university presidents were among those present. It was an assemblage of which any man might be proud to be the central figure. Speeches, fraternal and eloquent, were made by Senator Depew, Mr. Hyde, Secretary Root, M. Cambon, and President Eliot, of Harvard. The whole affair was so well conducted that M. Cambon must regard it as one of the most delightful and satisfying events in his whole career.

M. JULES CAMBON,  
Retiring French ambassador, who was honored with a grand banquet. — *Cleveland*.

IT MAY be said with perfect justice, we think, that no man living has done better or more practical service in behalf of that noble organization, the Young Men's Christian Association, than Mr. James Stokes, of New York. Mr. Stokes is a member of the international committee of the Y. M. C. A. and has been prominently identified with the work in the metropolis for many years, but his special field of philanthropic activity has been in Europe. He gave the funds necessary to erect the Y. M. C. A. building in Paris, and was also instrumental in erecting similar buildings in Rome, St. Petersburg, and Vienna. Recently, while in attendance upon the national jubilee of the association in Paris, Mr. Stokes was invested with the cross of an officer of the Legion of Honor. Ex-Minister Jules Siegfried made the presentation in behalf of President Loubet and Foreign Minister Delcassé. Late Mr. Stokes went to Berlin, where he was received in audience by Emperor William and presented to his Majesty the thanks of the American association for the Emperor's congratulatory message on the occasion of the international convention at Boston, and also presented to his Majesty an elaborately bound copy of the minutes of the proceedings at the Boston convention last spring.

MR. JAMES STOKES,  
The New York philanthropist recently highly honored in France.

AMONG THE notable people who will be the guest of Lord and Lady Curzon at the "darbar" at Delhi, India, in celebration of the accession of King Edward, will be Lady Grey-Egerton, who, before her marriage, was a reigning belle in New York society, a member of the well-known Cuyler family. She was married in 1893 to Sir Philip Grey-Egerton, and her home life, it is said, has been an exceptionally happy one. Lady Grey-Egerton has a remarkably fine voice; indeed, it has sometimes been said that both she and Lady Randolph Churchill had they cared to do so, might have become professional musicians. Sir Philip and Lady Grey-Egerton are the happy owners of Oulton Park, a charming place in Cheshire, England, where they spend a considerable portion of the year. They have three children—two sons, who will be eight years old in April, and a little daughter. Lady Grey-Egerton is a devoted mother, and holds many of modern views concerning the education of the new generation.

LADY GREY-EGERTON,  
Formerly Miss Cuyler, of New York.

# New Orleans's Splendid Hospitality to the Bankers

By Eleanor Franklin

NEVER, PERHAPS, in the history of this country has there been a more marked display of real American hospitality than that which distinguished the recent convention in New Orleans of the American Bankers' Association. The charming Crescent City was gayly decked in bunting, flags, and banners, all proclaiming a hearty welcome to the delegates. During the three days of the meeting everything was done that could be done to make the occasion memorable to the distinguished visitors. The convention met in Tulane Hall on Tuesday morning, November 11th, and after three days devoted to business discussion and the election of new officers, adjourned to meet again presumably in San Francisco next autumn.

During the session able and interesting addresses were delivered by President Myron T. Herrick on general financial conditions; by Comptroller of the Currency W. B. Ridgely on changes in banking conditions; by President J. C. Brown, of the Citizens' National Bank, of Raleigh, N. C., on "The New South"; by Vice-President Johnston, of the Marine National Bank, of Milwaukee, on the Scottish system of branch banking, and by many others. Congressman Fowler, of New Jersey, author of the Fowler banking bill, now pending in Congress, led a spirited discussion on branch banking. On Wednesday night the bankers of New Orleans entertained the visiting bankers and their families at an elaborate banquet in the beautiful

banquet-hall of the New St. Charles Hotel, which had been magnificently decorated for the occasion. The whole city was decked in honor of the bankers with flags and bunting, and presented a charming appearance. The beautiful Crescent City was pervaded by an atmosphere of true Southern hospitality. It prevailed everywhere and made the bankers' convention in New Orleans one of the most enjoyable gatherings ever held by that splendid organization of representative financiers.

The convention adjourned at one o'clock on Thursday, the 13th, and the bankers, with their wives and daughters and visiting friends, went at once to the steamboat landing at the foot of Canal Street, where the Mississippi steamboat *Chalmette* was waiting, all decked with bunting, to take them for a twenty-mile trip down the river to a large sugar plantation, where the delegates could get an idea of the manufacture of Louisiana sugar through the various interesting processes from the cane-field to the table. The saloon of the steamboat was set with a long banquet table beautifully decorated, which made an attractive feature for the two thousand hungry excursionists, embracing the bankers and their friends. Everybody was in good humor, and the flow of Moët & Chandon's "White Seal" was continuous and unlimited. The people of New Orleans, true to their reputation for hospitality, had spared nothing to make the entertainment one of the most elaborate ever given by the city to a visiting delegation, and the little outing was one long to be re-

membered by everybody fortunate enough to be aboard. The trip back to New Orleans was made under the "silver Southern moon" that seemed to smile upon the broad Mississippi with unusual brightness and beauty. The orchestra stationed on the deck filled the still air with the sweet strains of old Southern melodies, and there could have been no one present who did not feel the subtle charm of a scene set amid such faultless surroundings. As the boat rounded toward the wharf and while every one was experiencing a vague regret that such a happy time must come to an end the orchestra started the sweet strains of "Home, Sweet Home," and the dear old song was taken up by every man and woman aboard. It is a beautiful fact that the full round chorus was fraught with a tremolo something akin to tears. After the enthusiastic burst of applause which followed this bit of sentiment "Dixie Land" was given, and the chorus came out of Northern throats with as much enthusiasm as from the lungs of the warm-blooded Southern delegates.

The special photographer of LESLIE'S WEEKLY accompanied the excursion and succeeded in getting the only pictures taken of the bankers while they were in New Orleans. Some of these photographs appear in this issue. Others will be found in the next number of LESLIE'S WEEKLY, which will be devoted largely to some of the most interesting features of the most charming and picturesque of all our Southern cities.

# New Experiment in Caring for Aged Poor

By Harry Beardsley

THE POOR-HOUSE means misfortune that is peculiarly pitiful. It suggests what seems to be the saddest fact of nature, the abandonment by the young and strong of those who have passed their period of activity and usefulness, have lost their ability to protect themselves, and are no longer needed in the schemes of the world. When we think concretely of the inmates of the almshouse we say, perhaps, that the fault for their present condition belongs to themselves, because in their youth they did not provide for this period of decay; but we feel instinctively that the blame may fall somewhere else as well. We suspect the existence of the thankless child; we feel the presence of the serpent of ingratitude. And it is this that gives us the mingled sense of pity and indignation—pity for those who are unfortunate, and indignation against those whose duty we feel it to be to protect and provide for them.

The average age of the 2,400 men and women who are in the great New York almshouse on Blackwell's Island is sixty-five years. So they are all old people, most of them fathers and mothers, many of them, even, grandparents. We know that too many of these fathers and mothers are unhappy, because they feel the shame of being subjects of public charity, and because their old hearts are stung by that serpent of filial neglect. And when we realize these things we are particularly grateful to the public official who appreciates them too, and who shows an eagerness to provide greater physical comforts—which is the most he can do—for those who are thus put under his care. And this is why a new plan which Mr. Homer Folks, commissioner of public charities for New York, has adopted deserves special commendation.

Mr. Folks has set aside a cottage on Blackwell's Island for old couples who are now inmates of the almshouse. Here husband and wife will live together, each pair having its own private room. The aged couples will all dine together at a large table in the general dining-room of the cottage; and then they may retire, each husband and wife to their own room, to sit together unmolested, as they wish. In a great public almshouse there are hundreds, of course, who are at best undesirable companions. There are scores of old men and women whose intellects have faded as their years have increased; there are many others whose physical infirmities have made them fretful, complaining, and most uncompanionable; and there are others, too, who have wasted the best years of their life, who have been low and dissolute and who have sunk into a degraded old age. The best must of necessity be herded with the worst, and in this is another source of unhappiness for those of finer fibre.

It is hard to bear misfortune alone. Comfort and sympathy, while they do not bring positive relief, soften and lull the active sorrow, as a mother's caress smooths away the pain of her child. Among the 2,400 poor on Blackwell's Island are twenty aged men and women who are happier because of the new plan of Commissioner Folks's, for they will have an opportunity now to retire from the great herd of men and women with whom they have hitherto been forced to associate, to comfort and console each other in private.

The cottage which has been dedicated to aged couples has been occupied for some time by the nurses of the almshouse. A new nurses' home has been prepared for them and their present quarters are being remodeled. When the repairing is completed there will be sixteen individual rooms in the age couples' cottage, enough to accommodate thirty-two sons. The kitchen and dining-room will be entirely separate from the general almshouse, so that the old couples will be in a colony by themselves. When any of them wishes to retire from the great crowd of inmates the little chamber in the cottage will be ready. Under conditions such as have always existed this would be impossible. In one great dormitory all of the women sleep. They eat in a tremendous, common dining-room on plain board tables and from dishes of tin. It is the same with the old men, who are in number about equal to the women.

A little investigation, which was made recently, disclosed several instances in which the new plan of Commissioner Folks will be a particular blessing. In the men's ward is an old German who is so feeble and infirm that he is frequently confined during the day in his bed. The ward in which he lies is a large room with a broad aisle down the centre, from end to end, and rows of beds on each side. In these beds are many who suffer from incurable diseases. There are no partitions between the beds, so that each of those in the great sick-room may see all that is going on. They see the ghastly faces of those who are near death. They hear the groans of those who are in pain. In such surroundings as these, one would think that a slight indisposition would too soon develop into a serious malady. When a man in the almshouse is sick his wife is permitted to sit by his bedside only during the day. Even then, under the very nature of things, she is not any too welcome in a ward of sick men. But so assiduous is the old German's wife for the comfort of her husband that if he is not well she sits, whenever she is permitted, by his bedside in the men's ward.

When he is strong enough to go about the almshouse

grounds she does not forget him. Sometimes a little money comes to her from her needlework, for this old mother is industrious. In the great dormitory where she sleeps with hundreds of others she has her bed in one corner, where she makes her patchwork quilts. She obtains many pieces of bright calico from those who visit the almshouse and, noticing her industry, send her the material with which to work. Her source of income is from the sale of her quilts. Her money she saves or invests in little delicacies at the almshouse grocery (of which more will be told later), and no sooner does she buy her treat than she hurries off to find her husband, if he is able to be about the grounds; for it is he who always is to have the first choice.

The almshouse attendants speak of the old couples who thus show their love for each other as "spoony." One of the first pair to be quartered in the new cottage will be a husband and wife who have been married more than half a century—a queer place for a golden wedding.

VENERABLE COUPLE STROLLING DOWN A LEAFY LANE ON THE ALMSHOUSE GROUNDS. Lucky.

The old man told me in confidence and with considerable pride that he had eloped with his wife. They lived in Ireland and she was sixteen and he twenty-three.

"It was fifty-two years ago that I got her," said the old husband with a spirited gesture.

"Pretty near fifty-three," added his wife.

She told me what a good dancer her husband had been in his youth, that he had often "done a step" in public and had invariably been applauded.

"I can dance as good as the next one yet"—the old man was very enthusiastic when he said this—"if I had a little practice and got limbered up." Then he struck an attitude—his left hand raised, his right on his hip, his left foot forward, the toe at an angle of forty-five degrees. The old people had been invited to see the room which they are to occupy in the new cottage. It was the joy of anticipation of the new life that had started the blood faster in the old man's veins, had recalled the days of his youth, had aroused his gallant speeches, and had made him feel like "taking the steps" as he had done so gayly fifty years ago.

Few who visit the almshouse appreciate the affection that is blooming in that sterile soil among the old couples. There are only ten of them in the great horde of inmates. But sometimes one can see a pair strolling down one of the long parading-places, walking slowly, for both of them are very feeble. The old man has a crutch or a heavy cane, his wife is as withered as a leaf; but as one sees them, lover-like, side by side, one knows that, in spite of their rags and wrinkles, there is between them yet that which is ever fresh and sweet and young. One may see sometimes an old couple on the steps of the chapel, returning from morning prayer. Three denominations, the Episcopal, the Roman Catholic, and the Lutheran, have places of worship at the almshouse, and there are many of the poor who are deeply devout. One sees the old father and mother, sometimes, in the little grocery, where they go to share the few nickels that they may earn or that may be sent to them by relatives, and one feels again the presence of that which is beautiful and tender.

This grocery store, under the administration of politicians, was a means of extortion, corruption, and evil. The store had a complete monopoly at the almshouse. Its keeper charged whatever he pleased for his wares, getting as much out of the poor purchaser as possible. The largest source of revenue was through the sale of what went under the innocent name of "sweet-apple cider." Gin and bad whiskey were sold, so that drunkenness was too common. Moreover, those who bought intoxicants were obliged to pay an extortionate price or their "cider." To stop all this corruption the new commissioner put a new storekeeper at the almshouse, and the first rule which went into effect was the absolute prohibition of the sale of "sweet-apple cider."

A regular scale of prices was drawn up, which is posted prominently on the wall of the little store, and which the storekeeper must strictly follow. The stock comprises smoking and chewing tobacco for the men, cheese, crackers, cakes and fruit, and materials for sewing, needles and thread—all sold at reasonable prices.

The plan of Commissioner Folks for a separate cottage for the aged pairs in the almshouse is, as far as the commissioner knows, unique in the United States. There are many private institutions for aged couples supported by charitable contributions or societies throughout the country, but, according to Mr. Folks's information, no public ones. The same plan has, however, been adopted in some European almshouses, particularly in England, where it has been shown to greatly promote the happiness of these unfortunate ones.

## A Democratic Prince.

IT IS possible that the democratic tastes and tendencies of Prince Henry of Prussia were developed somewhat during his brief sojourn in this country, where, it will be remembered, such traits as these were pleasingly conspicuous. At all events the prince has a strong liking for the simple ways of the common people now, if we may trust current reports of his doings in the German papers. On a recent trip to Darmstadt, we are told, he stopped at Verden to buy forty-two pounds of benzine. The young man who served him was so much pleased with his manners that he offered him a cigar, which the prince accepted with thanks. At Holzendorf the automobile needed water, and the prince took a bucket and helped to fill it. Then he stopped at a tavern, shared his sandwiches with the host's children, talked Dutch with the hostess, and on parting got from her a bunch of roses with the injunction to place them in water as soon as he got home.

## New York's Obsolete Financial System.

IN SPITE of its great progressiveness in many respects, New York City still adheres to a financial system which is incongruous and far behind the age. The defects of the system were emphasized and remedies therefor outlined in a recent able address before the Manufacturers' Association in Brooklyn by Comptroller Edward M. Grout, who is probably the most capable official of that title that the metropolis or any part of it has ever had. Mr. Grout showed that, owing to the fact that taxes are not made payable until after October 1st, the city is obliged to borrow \$75,000,000 each year to meet its expenses from January 1st to October 1st. This involves an interest charge of \$1,250,000. He proposed to seek legislation which would diminish this evil by permitting a rebate at the rate of 3 per cent. on taxes paid early in the year. He added that this figure was  $\frac{1}{2}$  or 1 per cent. less than was paid to banks, and the plan would save the municipality several hundred thousands annually. The comptroller also dwelt on the oppressive burden of the sinking fund, into which a vast amount of money is needlessly turned that should be used to reduce taxation. Under the present law \$328,000,000 would be locked up in the fund by 1928.

Mr. Grout favored Deputy Comptroller Stevenson's suggestion that the statutes be amended to allow the investment of surplus moneys, now going to the sinking fund, in special city bonds, thus releasing the cash for current uses. He referred to the law which limits the aggregate of the city's debt to 10 per cent. of the actual value of the taxable real property, even including in the debt bonds issued for income-producing improvements, and declared that in order to provide larger sums for absolutely necessary improvements all such property should be assessed at its full value, as the law plainly requires, instead of at 60 or 70 per cent. of actual value, as has been the custom. Mr. Grout made the somewhat startling statement that, because all the property which the city wants for improvements must be procured by bond issues, "the budget never has shown and cannot show the whole expenses of the government, and no real profit-and-loss sheet of these municipal enterprises is to be reached by the municipal book-keeping." This is the strongest possible evidence of the curiously and disgracefully muddled financial methods of this great community caused by antiquated laws, and it is to be hoped that the next Legislature will do all it can to straighten out the tangle.

### The Drama in New York.

ONE OF the marked dramatic successes of the season is the delightful three-act comedy, "Imprudence," by H. V. Esmond, now running at the Empire. It is one of the evenest plays ever produced here and the cast fits the play. It cannot be called a remarkable production, nor is there any particularly brilliant star in the cast. But "Imprudence" is full of life. It ripples with gentle humor, and is acted so naturally that interest in it intensifies from the beginning to the end. The plot hinges about the intrigues of an evil-minded woman, who endeavors, unsuccessfully, of course, to thwart a chivalrous lover. The play was intended to bring out Mr. William Faversham as a star, but it makes him no more prominent than it does Miss Fay Davis, who, fresh from her London successes, has made a striking impression in her first engagement in America. The sweetness, grace, and dignity with which she takes the part of the heroine indicate that she is capable of better things, perhaps even the best. She seems to have some of the qualities that have given Miss Maude Adams such vogue with theatre-goers. As for Mr. Faversham, he has never done better. With his self-consciousness toned down, and his mannerisms materially moderated, he carries his part admirably. I cannot forbear a word of compliment to Miss Hilda Spong, who, as the "villainess" of the play—something of a new rôle for her—reveals again the cleverness and versatility of a fascinating woman.

With some expectation the public awaited the first production of Paul Heyse's five-act religious drama, "Mary of Magdala," at the Manhattan. It was anticipated that Mrs. Fiske, in the character of *Magdalen*, would find an opportunity to again prove her rare dramatic talent, and expectation in this respect has certainly not been disappointed. Much has been written of the *Passion Play* and all who have seen the wonderfully realistic performance of Oberammergau will want to witness the remarkable play at the Manhattan, culminating in the terribly realistic tragedy of the Cross. Nothing that New York has had this season surpasses in scenic effects the latest play of Mrs. Fiske, and I might add that nothing in the way of original and remarkable acting has yet been presented rivalling that of Tyrone Power, in his extraordinary creation of *Judas*. The new drama is intensely religious, but poetical and tragic. It leaves a deep impression upon every beholder.

There can be no question as to the great popularity of Viola Allen, no matter in what play or part she may appear. The crowd seems to follow her. Her success as *Roma*, in the dramatization of Hall Caine's decidedly indifferent novel, "The Eternal City," at the Victoria, is therefore not surprising. The play is a melodrama, beautifully staged, full of excitement, and stirring with enthusiasm, especially in the galleries. It must be said of Miss

Allen that she tries hard to carry a part that is a little too heavy for her. A gentler handling of the theme by one possessed of a softer, sweeter voice and greater power of emotional acting would give to the character of *Roma* the greatest possibilities. But why be critical with one who has proved her ability to attract the crowd? The cast is not distinguished by any number of notables. Mr. Edward Morgan plays the part of *David Rossi* earnestly and intelligently. Mr. Frederic de Belleville also does well, and Mr. E. M. Holland, in his trying presentation of His Holiness, Pius IX., wins many plaudits. It is evident, from the crowds that flock to the Victoria, that "The Eternal City" may be booked for an eternal run.

The continuous New York successes worthy of special mention include "A Country Girl," at Daly's; "Du Barry," at the Belasco; "A Chinese Honeymoon," at the Casino; "The Night of the Party," at the Princess; "A Cigarette Maker's Romance," at the Herald Square; "The Silver Slipper," at the Broadway; Virginia Harned in "Iris," at the Criterion; Mary Manning in the delightful play, "The Stubbornness of Geraldine," at the Garrick; demure Ethel Barrymore at the New Savoy; Chauncey Olcott, at the Fourteenth Street Theatre; "The Ninety and Nine," at the Academy; "Sally in Our Alley," at the New York; and "Fad and Folly," at Mrs. Osborn's Play House.

Among the newest entertainments are "The Mocking Bird," with Miss Mabelle Gilman as the star, at the Bijou; E. S. Willard, at the Garden; Eleanor Robson, in "Audrey," at the Madison Square; Hackett, in "The Crisis," at Wallack's; Mansfield, in "Julius Caesar," at the Herald Square; and Nat Goodwin and Maxine Elliott, in "The Altar of Friendship," at the Knickerbocker. JASON.

### General Corbin's Poor Horsemanship.

THE QUESTION agitating military circles at Washington is whether General Corbin fell off his horse or not during the German military manoeuvres, and in the presence of all the distinguished crowned heads and shoulder-strap dignitaries congregated at that notable event. The Brooklyn *Eagle* intimates that he did. Nothing had leaked out regarding the incident until this intimation was made public in a six-line paragraph. Immediately a long story was telegraphed from Washington, explaining circumstantially and with many details that General Corbin rode a spirited horse during the manoeuvres and that the animal stumbled, unseating Corbin, but that he did not fall off. It was the horse that fell on him this time. Everybody who appreciates the enormous estimate placed on General Corbin's military abilities and horsemanship—by himself—will be gratified at this untimely and somewhat unsatisfactory explanation. The general, at least, appears to have been out of practice.

### Awful Devastation by Forest Fires.

THE ENORMOUS loss of life and property every year by forest fires, as shown by a recent bulletin of the Bureau of Forestry, is astonishing. Investigation has shown that in an average year sixty human lives are lost in these conflagrations, twenty-five million dollars' worth of property is destroyed, more than ten million acres of timber land are burned over, and young forest growth worth, at the lowest estimate, seventy-five million dollars is killed. The figures are mere estimates and fall far short in showing the full damage done.

"No account at all is taken of the loss to the country due to the impoverishment of the soil by fire," continues the bulletin, "to the ruin of water-courses, and the drying up of springs. Even the amount of timber burned is very imperfectly calculated, and the actual quantity destroyed is far in excess of that accounted for. Forest fires in this country have grown so common that only those are reported that are of such magnitude as to threaten large communities. The lumbering industry in remote sections of the country may be ruined and people forced to flee for their lives without a mention of the disaster beyond the place near where it occurred.

"The fires that burnt this year in Washington and Oregon were uncommon only in the number of lives lost. The burning of logging and mining camps and farm buildings, the loss to the country in the destruction of timber and young-tree growth, are of yearly occurrence. Every fall, not only in Washington, Oregon, Colorado, and Wyoming, but up and down the Pacific coast and all over the Rocky Mountain country, fires burn great holes in the forests and destroy the national wealth. The air of the mountains over hundreds of miles is pungent with the smoke of conflagration, and navigation on Puget Sound has often been impeded by smoke. The following comment by Dr. Henry Gannett, of the United States Geological Survey, should convey a fair idea of the damage done in the State of Washington: 'In less than a generation two-fifths of the standing timber has been destroyed in one of the richest timber regions on the continent, and of the destruction more than half has been caused by fire. Assuming that the timber would, if standing, have the value of seventy-five cents per thousand feet, not less than \$30,000,000 worth has gone up in smoke, a dead loss to the people of the State.'"

A few of the States have adopted laws designed to suppress forest fires, and the Bureau of Forestry is making a special effort to secure similar legislation in other States, and to create what will be even more effective, a public sentiment against this ruthless waste of one of the country's greatest natural resources. In many localities there is on the part of most people an amazing indifference to the destruction of woods by fire so long as their own property is not endangered.

# Types of the New West

By John M. Oskison

GEOGRAPHICALLY THE new West coincides with the old. It is met at the Mississippi, supposing the observant, initiated traveler comes from the East. He will, sure enough, catch glimpses of it through southern Indiana and across Illinois, where there is likely to be a loosening of talk in the Pullman, and a kind of taken-for-granted-you-are-a-gentleman fellowship that is alien to the New York and Buffalo train loads. But the big union station at St. Louis scatters the Eastern travelers into isolated groups and breaks down their reserve. From St. Louis west the observant traveler may study his types without first breaking tediously through the habitual barrier of polite snubbing.

For the man of this new empire is busy; he is open to new influences; what the casual stranger has to say as he drops into the seat beside him may affect him and his business. He is courteous, but there is no sense in spending half an hour talking about the discomforts of travel and the varieties of landscape when there is information to be gained of the process of manufacturing shoes, or the study of Latin in the Eastern colleges, or the fertilization of this soil.

Trained somewhat in the ready fellowship of the traveling West, the observant traveler, going down to Oklahoma—the modern industrial mecca of that shifting empire—noted the appearance in the chair car of a thin-faced youth, frock-coated and wearing a big, sombrero-looking white hat. There was the clear, dry, cloister air about him, contrasting so sharply with the general air of alertness. The traveler reflected that it was late June, and the middle West colleges were disgorging their graduates.

"I hope it isn't inconvenient," the traveler remarked as he took the chair beside the youth. The young man turned a pair of diffident blue eyes, shining through clear, gold-rimmed spectacles, to the traveler and said:

"No inconvenience at all."

"I had a seat up there"—the traveler nodded toward the front of the crowded car—"but the fat woman and the little girl gradually overflowed into it, so—" The traveler smiled.

"Yes; it's right hard on children traveling." That was not exactly what the traveler expected—surely the boy lacked the humorous sense.

"Just graduated from the State university?" The traveler meant the University of Missouri.

"From the law school. I was 1900 at college." There was a note of pride, an assurance of maturity in the answer. "I expect to take the Bar examination in the fall."

"Down at—?" The traveler waited for the name of the town.

"No, not at Carthage. I'll have to go up to Jefferson City."

"I knew a man from Carthage once," the traveler led on. Yes, the boy had known him, as a young boy usually knows a mature, far-venturing man of his place. The traveler also knew one of the university officials—did the young man know Wilson? Yes, Wilson had given a course of lectures on the use of books, which he had heard. The traveler remarked that Wilson had been in college with him.

"You were a Harvard man?" The boy was interested. The other said he was a '90-man—very far away that date seemed now, with this young '02 law sitting by.

"Did you know Professor Wendell?" The traveler had been in one of his classes.

"I've been reading his 'Literary History of America,'" went on the young man. "I've finished it all but about seventy-five pages. It's right interesting, but—have you read it?" The traveler had heard most of it in the lecture room.

"Well, then, don't you think he has some queer expressions? He'll often say practically the same thing about two men. He has mannerisms, don't you think?" Taen for half an hour culture was his theme—a crude, undigested weight of facts and theories bearing ponderously upon various discussions—until the traveler asked:

"You'll go into practice as soon as you pass the examination?" Yes, he would go into —'s office as clerk. His prospective employer was a politician, a member of the State Legislature, a man known throughout Missouri for the eloquence of his jury pleas. Yes, the boy had spoken in public. One year he represented his State in the interstate oratorical contest, speaking on the "Loneliness of Genius." No, he had not won. His effort was deemed second best. A Minnesota man won, a big, full-faced young man, who shouted the command "Be patriotic!" to the theatre-full of auditors.

He hoped to be married soon; he had become engaged to her the year before, while he was at home in the long vacation; he had not seen her since Christmas. His pale face lighted up as he spoke of her. She believed in him—was sure that he would become Governor some day. She was not a "society parasite"—she had for two years taught school near Carthage. She would go on teaching until that time. The traveler hoped sincerely that it would not be long.

"Granby—change for Joplin, Carthage, etc." It was the negro brakeman shouting. The young man gathered up his "telescope" suit case, an umbrella, and a hamper, box-like little camera, gave his hand shyly to the traveler, and hoped he might see him again. As the train clicked over the intersecting rails, and the traveler had a last glimpse of the broad-fronted young man, his trousers standing out from his heels in the manner of trousers much bagged at the knee, the older man wished that he might know something more of that Bar examination and—well, of the little school-teacher. The traveler felt

that it was a good thing to have this young man carry his culture down to Missouri's Carthage, where zinc and practical politics are so likely to submerge ideals.

As the traveler came out upon the platform, on an unsteady journey to the smoker, the down draught between the unvestibled cars brought a great cloud of soft-coal smoke and a dash of cinders square into his face. As he grasped half blindly for the handle of the door a good-natured shout followed him into the car. A small man, with bleached mustache and deep wrinkles in the corners of his eyes, commented:

"That's hell, ain't it!" He nodded back toward the rattling brake wheels and the shaking coupling. The traveler led the way to a seat, and made room for the cattleman. As he took the proffered cigar, the how-legged, booted little man turned the back of the seat in front, and hoisted his feet to a comfortable position on the red plush.

"Been up to St. Louis with cattle?" queried the traveler. It was easy to guess that.

## Autumn Rain

WHAT a music in the falling of the steady autumn rain

As it murmurs through the woodland in a monotone refrain!

When it rattle, rattle, rattles

Like a thousand fairy battles

On the yellow autumn carpets to the piping of a Pan,

With a rata-plata, rata-plata, plan plan plan.

WHAT a music in the falling of the steady autumn rain

When it marches o'er the city to a military strain!

How it clamor, clamor, clamors

With a million tiny hammers,

While the spirit of November marches in the plashy van

To the rata-plata, rata-plata, plan plan plan.

WHAT a music in the falling of the steady autumn rain

When it dances on the barn above the bins of yellow grain!

How it jingles o'er the shingles

And its melody commingles

In an anthem of thanksgiving as the weary husbandman

Hears the rata-plata, rata-plata, plan plan plan.

OH, the sleep-compelling music of the falling autumn rain

As it rushes from the roof and splashes on the window pane!

What a sweet and soothing lulling

When the sleepy ear is dulling

And a drowsiness comes stealing from the slumber wings that fan

To the rata-plata, rata-plata, plan plan plan.

LOWELL OTUS REESE.

"Uh-huh; had four loads on the market Monday." He puffed his cigar complacently.

"For a good price, I suppose?" The cowman half turned as he answered:

"Four-twenty; that was good for my stuff."

"What did you have—Texas?"

"No; Louisiana stuff—small but fat. Went ninety."

"Do you think those light steers pay?" The traveler knew something of the business.

"No; I ain't goin' to fool with 'em again. The time's past now when you can afford to put poor cattle on good feed. This is my last bunch of either Louisiana or Texas stuff. I'm goin' in for gradin' up my natives. I want twelve and thirteen hundred pound steers to come off my grass."

"You're in a pasture now?"

"Yes, down in the Creek nation, below Tulsa."

"Good chance for feeding down there this winter—good corn crop, isn't there?"

"Yes, plenty of corn; but there it is again—you got to have good stock to put corn into to make it pay. He sent up a couple of cars"—the cattleman nodded across toward a man looking intently out of the window—"sent 'em up early in the spring, after he'd fed 'em through the

winter, and he only got four-thirty. Too triffin' to fool with, his steers was."

"An' he's done another fool thing now. Had some good stock on grass, but they wasn't fat; he got excited over the big market, and sent up two cars with mine. I beat him half a cent, simply because my little stuff was fat. I reckon he's learnt something, havin' it illustrated so plain, that way."

This was the new cattleman, certainly, clean-shaven, returning from a good market sober and with theories as to grading up his herd. Wire fences and the encroaching farms had changed him. The recklessness was gone, only a scrap of the picturesque profanity remained. But the frank, blue-eyed, open-hearted little man was there, who ended the conversation with a nod and crossed over to talk with his less fortunate, less adaptable neighbor.

Back in the chair car, two seats ahead of the observant traveler, a pair of neatly gloved feminine hands were tugging at a window. The traveler came up to assist in the struggle. Contrary to tradition the sash came up with ridiculous ease. A pair of brown eyes, under a neat brown straw hat, smiled openly at the traveler.

"Thank you," said a quiet voice; "I couldn't seem to do that." There was just a suggestion of the mischievous in the smile that uncovered some even teeth. A fool might have thought she meant to flirt; a cad would have received one of those rebukes that a man does not like to overhear for the pride of his race. The traveler merely remarked:

"Car windows have moods." She removed her bag from the vacant chair beside her. "Thank you," said the traveler, sitting down. He waited for her next remark.

"Do you read much when you are traveling?" She held out a paper-covered book.

"Collected American Humor," read the traveler aloud, then glanced up at the brown eyes twinkling beneath the neat brown straw.

"There's some real funny things in there," the girl went on. The traveler opened at random. "'Wimmen is curious,' says Uncle Jason to me; 'you pluck 'em green, like most men wants to do and they're like green apples—they give you a pain in the —. But you let 'em ripen, and they fall plump into your lap!'"

"A queer notion of women," ventured the traveler.

"Oh, that! I've only read a little of that." She put the book aside impatiently. "There was one piece about camping out I liked. I'm taking the book to show Mr. Ward. You don't know it, but Mr. Ward took some of us over to Grand River to camp out three days—Mrs. Ward, Mrs. Anderson, Mr. and Mrs. Miller, Mr. Walker and I. We had a real jolly time. Mr. Walker was such a hand at telling stories. I was laughing a while ago at something he said about an old newspaper, when we all got wet Friday night. He had an *Afton Herald* that he'd used to stop a hole in the men's tent, and he held it up next morning after the rain, when we were all miserably wet and cross, and he says, 'Read the *Herald* for amusement; there's not a line of dry reading in it.' He's real quick that way."

It came out, in an entirely casual way, that she was in charge of the millinery department of the "Mammoth Store," Mr. Ward's mercantile establishment at Afton, in the Indian Territory, and that she had been to St. Louis in her employer's interests. Mr. Walker was in the dry-goods department. She had known him for two years. She often went to St. Louis alone, but it was tiresome sitting by one's self, reading all the time. She would be glad to get back, for the peaches on Mr. Ward's farm would be ripening now, and some of the men often drove her out in the evening to get a small basketful. Generally, she would admit, it was Mr. Walker who drove her out.

The brakeman called "Afton!" The traveler carried her bag, bundle, and umbrella down to the platform, admiring, and understanding the reason for, the appropriate brown straw hat set comfortably over a mass of rich brown hair. She thanked the traveler, then turned to meet a tall young man in clean shirt-sleeves who came forward to take her bag and bundle. She had a different smile for him. The observant traveler liked the appearance of Mr. Walker. He suddenly felt that reading was, after all, a poor substitute for the human touch.

## Depressed and Nervous from EXCESSIVE SMOKING AND DRINKING.

HORSFORD'S ACID PHOSPHATE, a most valuable remedy for relieving the immediate ill effects of excessive smoking or drinking. It cures the heavy, dull headache, depression and languor, and induces restful sleep.

TELEPHONE Service is the modern genius of the lamp. With a telephone in your house the resources of the whole city are at your elbow. Rates in Manhattan from \$48 a year. N. Y. Telephone Co., 15 Dey 111 W. 38th.

## Feeding to Fit

is the problem with infants. The growing child has ever-changing needs, but a perfect milk can never go amiss. Borden's Eagle Brand Condensed Milk is the acme of substitute feeding. Send 10 cents for "Baby's Diary," 71 Hudson Street, New York.

# The Most Successful Air-ship Ever Built

By Franklin Forbes

IT IS doubtless a fact that a practical air-ship will yet be contrived, but in the meantime inventors and experimenters will have to pay more or less toll with their lives for their daring in invading the fields of the air. The tragical death of the Brazilian aeronaut, Augusto Severo, in Paris, last May, due to the defective construction

tion of his aerial vessel, has been followed recently by a double fatality of like character in the same city. The latest victims were Baron de Bradsky, the Hungarian aeronaut, and his engineer, M. Morin. The two men ascended in a so-called dirigible balloon from the same spot as did Severo, but the contrivance was soon at the mercy of the wind, and finally the wires attaching the car to the great gas bag broke, the car was dashed from a considerable height to the ground, and its occupants were killed.

It was only by a narrow margin that Santos-Dumont himself, in one of his ascensions some time ago, escaped death, his air-ship having dropped upon a building. While disasters such as these will not have a deterrent effect on the ballooning enthusiasts, the latter should be more careful hereafter to at least make their craft structurally strong. One aeronaut, who took to heart the lesson taught by Severo's fate, "looked to his harness" before he started, and was rewarded for his precautions with a notably fortunate trip. This prudent and competent navigator was Stanley Spencer, a young Englishman, the hero of a thousand parachute descents.

Mr. Spencer made a twenty-mile flight over London in an air-ship of his own construction on the 19th of September. Starting from the Crystal Palace, he made for the great dome of St. Paul's, but the fog was so thick over the river that he had to turn westward. He cut circles and "figure eights" along the Thames valley and then struck out for the open country. At dusk, with only enough petroleum left in the fuel tank to last for ten minutes, he alighted quietly, without mishap, in a pasture in Middlesex, and took his machine home on a farmer's cart. Unquestionably it was the most remarkably successful maiden voyage ever made by an air-ship.

Spencer, who has been building balloons all his life, as did his father and his grandfather before him, made free to adopt the striking features of the design of the Santos-Dumont balloons. The Spencer air-ship has the torpedo-shaped bag, the long, frail skeleton, the big double-bladed propeller driven by a petroleum engine. It is not quite as large or powerful as the craft in which the Brazilian won the Deutsch prize, but it is perfect in its way. The inventor gave his attention chiefly to making it a safe craft to navigate. The motor is some twenty feet from the escape valve, and the exhaust tube, which spits fire in flight, is covered with wire gauze, like a miner's safety lamp. An automatic valve opens when the balloon expands beyond the safety point. The propeller is at the bow, giving the balloon the appearance of flying backward. This construction keeps all the driving mechanism within sight of the navigator.

Another ingenious novelty is a "safety belt" extending

around the balloon internally. Should the bag burst, the belt immediately becomes the rim of a great parachute. The aeronaut will build a bigger and more powerful balloon. An interested spectator at the Crystal Palace grounds on the day of the flight was M. Henri Lachand, builder of all the Santos-Dumont air-ships.

## How Animals Fight.

WHILE SOME domestic animals, such as the cat and dog, for example, are fond of engaging in sham battles, apparently for the fun of the thing, as a rule when animals engage in combat they do so with a fixed and deadly purpose. And in these contests, as in others, the battle is not always to the strong. In a European collection a fight took place recently between a polar bear and an Indian sloth bear. The advantage in size and activity was so far on the side of the white bear that the result of the fight was somewhat unexpected. The smaller and awkward sloth bear killed the white bear without difficulty, and suffered very little itself. Among the antelopes there is one species, a sable antelope, which is not only a bold fighter in self-defense, but has devised a system quite as ingenious as those taught in schools-of-arms. It has very long, pointed horns bending backward. If wounded or attacked by dogs, it lies down, thus protecting all the exposed under parts, but abandoning apparently both the power of movement and the advantage of height. But by swinging its neck or tossing its head it can cover its whole body by strokes of its powerful and sharp horns, just as a fencer covers the body with his foil. Mr. J. G. Millais says that it will kill any dog which attacks it in this position,

which it probably also adopts when defending itself against wild enemies.

In the pitched battles which sometimes take place between the great carnivores and the largest and most powerful of the ox tribe the forces of animal courage, desperation, and bodily strength must be exhibited on a scale never elsewhere seen. Such combats do occur, but have seldom been witnessed, and still less frequently described. Two or three lions sometimes combine in such an attack, but from the marks seen on buffalo it is probable that sometimes there is a single combat, for it can hardly be supposed that the buffalo could escape from more than one lion. The number of foot-pounds of energy put into such a struggle must be something extraordinary. The efforts of a lion, which can strike a man's arm from the shoulder and leave it hanging by a strip of skin, or which can carry a cow over a high stockade, endeavoring unsuccessfully, in close grips, to drag down or disable a buffalo bull, must be on a gigantic scale; and the strength which can shake him off, and, as it is believed, occasionally crush the lion afterward, must be even more amazing. A buffalo bull has been credited with engaging three lions in mortal combat, and making a good fight before he was disabled by one of the lions hamstringing him by biting his legs from behind.

## Need Teeth.

SERIOUS FAILURE OF BODY COMES FROM LACK OF A GOOD GRINDING MILL.

"A FEW years ago mother had her teeth all taken out to relieve her suffering, but failed to leave her gums so sensitive that the wearing of false teeth or the proper mastication of food were equally impossible, so that in the spring of 1901 she failed rapidly and body both giving way, and for many weeks I and reason were despaired of."

"At one call of her physician he said she absolutely must take more nourishment, something easily digested, 'try Grape-Nuts.' I immediately obtained a pack, prepared some with good, rich cream, and fed her from a teaspoon. She began to take it regularly and liked it food so well she would ask between times if we had a ready for her. She began to improve at once."

"It is now three months since she began eating food. She has fully recovered her health, looks better and is fleshier and stronger mentally and physically, than for many months previous."

"Grape-Nuts furnished the nourishment for her teeth seemed impossible to get from any other kind of food. Name given by Postum Co., Battle Creek, Mich."

CHARMS OF MUSIC ATTRACT THE WEALTH AND BEAUTY OF THE METROPOLIS

N—NEW YORK'S FASHIONABLE DIVERSION.

ANIMATED SCENE BEFORE THE RISE OF THE CURTAIN.—*Drawn for Leslie's Weekly by Ch. Weber.*

RICHARD HARDING DAVIS,  
Who wrote the success, "Captain  
Macklin."

Davis, as most people know, had the good sense to secure an early and valuable training for himself in that excellent school for authors, as well as journalists, the New York Sun office, where he served for a period as a reporter. Mr. Davis had the good sense also to stop being a reporter at the right time, before he had imbibed too much of that cynicism and disbelief in the reality of human virtue which are apt to incur the soul of the reporter after a few years' experience behind the scenes of a newspaper office. Mr. Harkins tells us that Mr. Davis's first stories were written during his undergraduate days at Lehigh College and appeared in a college paper of which he was editor. The author thought enough of these stories to collect them and have them published in book form at his own expense. Apparently they did not strike the reading public with stunning force and will probably not be heard of again until, perhaps, in the dim and distant future they appear in a posthumous edition, as the early scrapings of great authors have a way of doing after the great ones have gone where they cannot be consulted.

PROPOS OF the observations made by Mr. Howell in his new book, "Literature and Life," on the literary centres of America, it is a fact not to be easily accounted for that there seem to be only three cities in this country wherein a periodical requiring and aiming at a national circulation can be published with any probability of success. The names of these three will at once occur to every one; they are Boston, New York, and Philadelphia. Numerous melancholy instances come to mind of magazines and illustrated weeklies started in Chicago, St. Louis, New Orleans, and other towns, with enough capital, apparently, in the shape of money, brains, and experience to command success, but which have failed after a brief if not wholly inglorious career. It is true that San Francisco has its *Overland Monthly*, which has maintained itself, after a fashion, since Mr. Roman started it in 1868, under the editorial guidance of Bret Harte, but since the days of "The Luck of Roaring Camp" the *Overland* has never cut much of a figure in American periodical literature, whatever its intrinsic merits may have been all these years.

An illustration of the seeming importance of the halting point in the life of a magazine is furnished in the history of *Outing*, which in its initial numbers bore the imprint of a country weekly at Chatham, a village near Albany, N. Y. From here its growing ambitions and increasing thirst for fame and more subscribers urged it into Albany itself, but the old Dutch city of the upper Hudson failed also to furnish a congenial environment from the publisher's point of view, and so after a brief period the magazine moved on and into the classic atmosphere of Boston. Just why it did not stay there we do not know, unless it was because the *Atlantic Monthly* regarded it as a poacher upon its own special and hitherto exclusive preserve and did not treat its little brother kindly. Any way, it was not long before the wanderer from Chatham, like poor "Jo," was on the move again, this time bringing up in New York, where it has lived, flourished, and been happy, we believe, ever since. Whether the locale of a publication house is an all-important element in the success of a periodical which appeals to the whole country for its constituency we do not pretend to say. In theory it ought to make no difference to subscribers or readers whether a magazine bears the imprint of Podunk Corners or hails from Union Square, providing the contents level up to a high literary standard, but somehow it does seem to make a great difference. We note, in this connection, that an excellent and high-class monthly devoted wholly to serious literature has been issued for the past year or two from a Vermont town. We are wondering whether it will prove an exception to what appears to be a rule.

THE RULE of which we have spoken in the foregoing paragraphs, if it is a rule, is not impaired by the fact that a considerable number of publications are issued from small and comparatively unimportant cities in this country which have, collectively, an enormous circulation and a range almost as wide as the republic itself. But these publications, although wholly respectable so far as their moral tone is concerned, are hardly to be classed as literature in the true sense of the term, and their very titles would probably be unfamiliar to the majority of the readers of this paper. A little city up in Maine "mothers" a whole brood of these sheets, and the houses where they are incubated and sent out into the world form the largest and most important industry of the town. The publications emanating from this source are all of the "household journal" type, made up chiefly of continued stories of the melodramatic order, with poems, adventure tales, "advice to girls" and "hints to boys," written for the most part by people as unknown to the

higher world of letters as the papers themselves. As for the readers of these things, they may be found almost wholly among our cousins out on the farms and in other rural and secluded parts; the same class who buy the cheap and lurid catchpenny histories and other books urged upon them by irrepressible and seductive agents and which are never seen or heard of elsewhere. The "household journals" aforesaid appeal to this constituency in the first place because of their astonishing cheapness in price, but still more because of the chronos "thrown in" and the marvelous premiums offered to the getters-up of clubs in the shape of almost everything wanted by the rural population.

IN THE case of Gouverneur Morris, the author of "Aladdin O'Brien" (The Century Company), we have an instance of a kind rarer than it should be, where a young man has not permitted the enervating and seductive influences which often go with high birth, inherited wealth, and aristocratic associations to turn his feet into the paths of selfish ease and idle, aimless living, but has, rather,

GOVERNOUR MORRIS,  
Author of "Aladdin O'Brien."—Cook.

made the most and the best of the advantages of his station to develop his natural gifts and earn the rewards which go with honest, genuine, and real devotion to a literary calling. Although still a young man, Mr. Morris has written two excellent novels, the first being "Tom Beaulieu" and the second this story, just out, of "Aladdin O'Brien," a tale of love and war, and truly a work of genius; a production worthy of the hand of any living master of the art of fiction.

IT IS a genuine relief to turn from the sanguinary tales of war and carnage as well as from the "small beer" chronicles of modern society, which together make up so large a part of the fiction of the day, to such a sweet, happy, and restful picture of life in the good old times as we have in Nancy Huston Banks's "Oldfield" (Macmillan), a story of the Pennyroyal region down in Kentucky. It is true that Kentucky, as a whole, at that very time—the middle of the last century—was living well up to its reputation of being the "dark and bloody ground," but somehow the feudal wars and other events of the fearsome and disquieting kind, which have checkered the history of that commonwealth down to this very day, threw none of their shadows over the Pennyroyal country, where "living was leisurely" and "where the weeks and months and years went by so quietly" that certain gentlewomen who figure in the story "grew old without knowing it." The only truly bellicose and sinister figure who appears upon the scene is the mysterious Alvarado, the Terrible, supposed to be a fugitive Spanish pirate, and he supplies the one tragedy in the tale, where, in a murderous and unreasoning passion, he strikes down the judge on the steps of the Oldfield court-house, while the latter, maddened by the cruel and unjust blow, is impelled on the instant to take vengeance with his own hands, according to the code of the time, but is restrained by his finer sense from the deed, only to die a few hours later in a heroic effort to save an old cripple from the hoofs of a runaway team. Save for this incident, and the events leading up to it, the current of life in Oldfield moves peacefully along, and not even the terrible Alvarado is enough to cause the good people of the town to close their front doors day or night in the summer time—that is, "all except Miss Judy," and she did not do it because she was afraid.

ARTHUR MORRISON,  
Author of "The Hole in the  
Wall."

MR. ARTHUR MORRISON in his new book, "The Hole in the Wall" (McClure, Phillips & Co.), gives us a story of slum life in East London about the middle of the nineteenth century. The hero of the narrative is one Stephen Kemp, a child of less than eight years, who tells part of the history, the rest being related by another observer. This boy is left an orphan in the care of his disreputable grandfather, the keeper of an inn on the river, and the whole of the action is comprised within the few weeks which elapse between the coming of Stephen to the "Hole in the Wall" and the abandonment by the grandfather of his nefarious occupation through affection for his grandchild. The book is by no means what our mothers and aunts would have called a "pretty story." It abounds in crime, in bloodshed, in depravity of almost every description. But it is sincere in its intention, real in its presentment, and it leaves a good, strong-flavored moral impression behind it. A generation ago, in fact, and with different treatment, the tale would conveniently have served as a religious tract. The change is merely in the dress; the tract is there, but its setting has altered, and the moral of the tract is none the less excellently discernible because its garb is worn with a difference. There is real art in the book, and a compelling vigor which carries the reader along whether he will or no.

IT WOULD go without saying among musical people that a story by Gustav Kobbé having to do with the operatic world would have that interest and charm coming from intimate knowledge and long experience, but many who are not specially addicted to opera will find in "Signora" (R. H. Russell) a little tale that will give them an hour of real delight. It is a very deft mingling of fact and fiction. A child, abandoned on the steps of the stage door of an opera house (evidently the Metropolitan Opera House, New York), is taken in by the stage doorkeeper and practically adopted by the entire company. The unusual environments among which the child grows up are so vividly and realistically described by Mr. Kobbé, that while the story was running serially he received many letters asking if he had not been transcribing actual facts instead of writing a piece of fiction. Some of the originals of Mr. Kobbé's characters, such as Madame Calvé, Jean and Edouard de Reszké, may be easily recognized from the story itself, while the reader is aided in the fascinating task of identifying them by many portraits and illustrations. The author knows his scenes and personages so well that he succeeds in giving the reader the fullest sense of illusion.

IN THE story "Avery," by Elizabeth Stuart Phelps, the power of narration, which is one of Mrs. Phelps's rare endowments, is present in full measure. It is the story of man and wife, of a beautiful love, of a passing act of neglect and its tremendous consequences, and of a physician's almost superhuman skill and heroism. All Marshall Avery asked for was another chance. Few men ever suffer so rude an awakening as was his, yet the unexpected outcome of it all is stimulating and satisfying. Mr. Sterner's illustrations are very clever and attractive. This story recently appeared in serial form under the title of "His Wife," and is published by Houghton, Mifflin & Co.

THE MESSRS. APPLETON have secured the American rights to the new novel of Mrs. Craigie (John Oliver Hobbs). The novel will not be published until the coming spring. It is a tale of English country life, and bears the title "The Vineyard."

## Coffee Did It.

PUT A MAN OUT OF THE RACE.

COFFEE serves some people in a most atrocious manner. "I was a veritable coffee fiend, until finally my stomach rebelled at the treatment and failed to work," writes a gentleman from New York.

"I had dyspepsia in its worst form; blind, staggering headaches with vertigo about a half hour after each time I ate, and I finally grew so weak and became so thin that my mother advised me to stop coffee and try Postum Food Coffee.

"I did not like it at first, but after experimenting in making it, mother soon got it just right, and then I liked it better than coffee.

"I soon noticed my biliousness stopped and I lost the trembling effect on my nerves; Postum did not stimulate me but seemed to exhilarate. I gradually regained my wanted good health; my old appetite returned, and to-day I am well—dyspepsia, headache and vertigo all gone, and Postum did it.

"When I began its use, I had been troubled for two years with all kinds of stomach trouble. I became a veritable walking apothecary shop, but I have not taken a dose of medicine since I commenced using Postum." Name given by Postum Co., Battle Creek, Mich.

MILLIONAIRES' IMMENSE SPORTING GROUNDS HORSE SHOW A PURELY SOCIAL FUNCTION—FOOTBALL STRUGGLE ENDED

CAPTAIN KEENAN,  
Of Harvard football team, a  
175-pound athlete.  
Hayden.

A MAMMOTH SPORTING FIELD.—The millionaire promoters of outdoor sport evidently have faith in the stability of horse racing and kindred pastimes, for the preliminary arrangements have been made for laying out the greatest sporting field in this country, if not in the world. Several hundred acres have been purchased by the Belmont-Whitney-Keene syndicate on Hempstead Plains, Long Island, within easy access of New York and Brooklyn. While primarily for horse racing, the new grounds will be used also for automobile racing, trotting, athletics, and football. The ground is practically level and little grading will have to be done. These grounds are "to take the

place of Morris Park, at Westchester, where advancing civilization is slowly encroaching on that handsome track. The new course may not be used for horse racing for four or even six years, but the millionaires do not propose to be caught napping and are simply looking ahead. Great sporting carnivals of various sorts will be promoted, and it is expected that the metropolis will have a field for every branch of sport, which cannot be excelled in the world. It is only a question of time before the tracks at Gravesend, Sheephead Bay, and Brighton Beach will have to go, and our original suggestion that all the racing in the East might ultimately be held on one track may come to pass, after all.

WORK FOR THE L. A. W.—There are those who seem to think that the League of American Wheelmen has done its work and that all the grand old organization has to do from now on is to crumble and fall into nothingness. Such is far from the case, as was emphasized last summer to a small extent and which will become more apparent in another year. The good-road problem is becoming better understood each day. This crusade for better highways is reason enough for the health and prosperity of the L. A. W. The movement is growing, and, with the favor of the wealthy automobilists to help it, the L. A. W. is sure to make more headway in this direction than it has ever been able to make. The league, however, must drop some of its old-fogy ideas, if it expects to regain its old-time prestige and huge membership. Instead of abolishing its State divisions it should encourage the formation of local clubs in every town and hamlet where the bicycle has any following. Then local officials could look out for local needs, and in that way the main body would be benefited largely. The fact that the members are more or less set in their ideas was demonstrated recently in the State election in New York. The independents put a strong ticket in the field, but they were snowed under at a ratio of nearly five to one when the ballots were counted. General Stone's pet hobby, steel tracks, is favored by many, and New York is now giving a practical test to the idea. Paris is to have an international combination automobile, motorcycle, and bicycle show from December 10th to 25th. Our American manufacturers might take a tip from the Frenchmen and arrange for a similar show in this country. The show ought to be held in February or March, when the buying public is thinking about purchasing for the season.

HANDLING A BASEBALL TEAM.—The retirement of Andrew Freedman from professional baseball will, in the opinion of the other club owners and critics, prove to

be a real blessing to the game. No man ever connected with the game realized less about the requirements of the sport. One of the players connected with the New York team last year tells this story, which illustrates possibly why New York has had such a poor-playing team in recent years. "After one game," said he, "Freedman came to the club-house in a towering rage. Motioning to half a dozen of the players to step to one corner of the house, he delivered something like this: 'You boys,' meaning the six, 'are all right—but for the rest of you,' turning to the other players, 'Tehu!' The six players were as much astonished as were the less-favored ones." And yet there were some people who could not understand why the New York team insisted on clinging to tail-end honors so persistently.

HORSE SHOW A SOCIAL FUNCTION.—There was a time when the annual horse show in New York was considered an event of sporting significance, but it is considered so no longer. It is now purely a social reunion of the fashionable folks, and in his speech at the annual horse show luncheon the other day William C. Whitney summed up the situation when he said that on his travels in this country and abroad during the summer and fall he had met many people, and when he asked them when they were going to New York they all said they expected to be there about horse show week. Mr. Whitney at the same time paid a glowing tribute to the horse, but the horse is merely the means of attaining the end—social frivolity and display. There were, of course, in that vast throng in Madison Square Garden during the week many true lovers of the thoroughbred, the cob, the hunter, and the handsome little ponies, but there were more who watched the forms and handsome dresses of the society swells who paraded each afternoon and evening just outside the tan-bark inclosure. And the men, in their long frock coats, immense boutonnieres, and extremely high silk hats in the afternoon, and solemn-looking full-dress suits in the evening, attracted their portion of attention, as well as the richly gowned members of the swell set of the other sex. New York men are the best dressed in the world to-day, and our country cousins observe and take home the needed information to their tailors. To see and be seen—that is the horse show of to-day.

FAT MEN AS SHARPSHOOTERS.—At many of the shooting tournaments this fall in rifle ranges, armories, and the field, it has been remarked that fat men are coming to the front as sharpshooters, and there has been much speculation as to the reason. There is no good reason why the men of superfluous flesh should not excel in this scientific and delightful pastime if they give attention to it. Nervous energy plays little part in marksmanship. To become a sharpshooter one must have a good eye, steady nerve, and be an excellent judge of distance. It has been my experience that fewer fat men wear eye-glasses than do their thin and nervous neighbors. Shooting from prone or reclining positions appeals to the stout shooter, and he consequently does his best work at distances of 500 yards or over. While a man with a shooting eye can handle any sort of a weapon with more or less skill, the sharpshooter with the rifle is seldom expert with the shotgun, and vice versa. It is the nervous and thin man who generally makes the best bag in the field with the shotgun.

THE FOOTBALL STRUGGLE ENDED.—The gridiron heroes have gone back to their respective universities to prepare themselves for the holidays and incidentally give a little more attention to the learned professors. Yale and Princeton and Old Eli and John Harvard, have settled their battles on the field. While the Yale-Harvard game was replete with thrilling incidents and will furnish food for comment for many weeks, those who saw the battle at Princeton and digested it coolly will not lack for timely football talk for many moons. The Tigers fought nobly, but were outplayed. Yale's line this year was a stone wall, and all of the Tigers' strength and tricks

could not penetrate it. De Witt, while the best punter of the year, outkicked his ends at times, and in consequence Princeton made poor work of preventing the Yale sprinters from running the ball back after punts. Bowman, for Yale, did not kick as far, but the Yale men were there when the ball came down, prepared to do their part in stopping a Princeton dash up the field. While Yale played hard against De Witt, there was no attempt made to disable him, which speaks well for the temperament of the Yale players. With De Witt on the side lines, Yale's task would have been comparatively easy and Princeton could not have hoped to score. With the navy-army game at Philadelphia on November 29th ended the liveliest football season in the history of the great college sport. The real admirers of the rough-and-tumble game are thankful that so few serious accidents have happened upon the gridiron this year.

CHASE THE HOME CROOKS.—While the crooks of the running turf have been creating international interest of late, little has been said about the shady men of the turf on this side of the water. While many undesirable rascals have been driven away from the race-tracks in America during the last few months, nothing officially has been said about such moves. Would not a policy of publicity, such as that adopted by the Jockey Clubs of France and England, have brought about better results?

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

M. A. F., LOUISVILLE.—Gold Heels was retired from the turf presumably for stud purposes, but his new owners believe that the winter of the Suburban will train on, and that he will be seen on the track again next season. Advance Guard was the best all-around distance handicap horse of the year.

M. C. T., CHICAGO.—The general belief in New York is that no American League Club will be located in that city. Baseball experts believe that Johnson and his friends are more likely to locate a team in Pittsburgh.

C. A. L., BOSTON.—Such a book as you ask about has been printed, and can be had by addressing J. E. Sullivan, No. 18 Park Place, New York City. There are chapters devoted to exercise for business men.

S. T. H., SAN FRANCISCO.—In a football game, the ball going out of bounds must be put in play where it leaves the chalked inclosure, and not from a point from where it may roll after hitting the ground. G. E. S.

## Breeding Tramps.

THE ENGLISH papers are complaining that the young children of workmen in that country are trained to vagrant and shiftless habits by the practice of their parents taking their families with them on the road when out of a job. The children acquire a taste for nomadic life. From this class of roving children the small army of tramps in England is said to be very largely recruited. Poor workmen who have been obliged to sell their family belongings cannot sell their families too, so are obliged to take them with them on their travels. This is an explanation of the tramp evil which happily does not apply to America. The wandering instinct is doubtless just as strong in the average American as it is in the average Englishman, but here, when a man is struck with a bad case of vagrant fever, he generally quarters his family, if he has one, on his relatives and goes off by himself.

Drives away care, lends buoyancy to the spirits and strength to the body—Abbott's Angostura Bitters.

BARNARD,  
Harvard's right guard, who tips  
the scales at 255 pounds.  
Hayden.

## Jasper's Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, entitling them to the early delivery of the papers, and in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

"THE EASIEST thing a man does is to believe," said my friend Bishop Joyce, the distinguished light of the Methodist Church, in one of his recent eloquent addresses. No stronger proof of this statement can be found anywhere than in Wall Street. The man who preaches the doctrine of unbelief when a bull market is on, and who even ventures to suggest that prices cannot everlastingly go up, is promptly sat down upon or driven out of doors by every promoter and every broker who has stocks to sell and who is perpetually looking for higher prices. But there are brave and independent thinkers on both sides of the ocean, having no axes to grind and no purpose to serve but the common good, who dare occasionally speak the truth.

My readers have had it in this column for many months past, and it is some satisfaction to observe that the financial sheets which, a few months ago, were vigorously denouncing the pessimism of "Jasper" are now admitting that speculation has been going too fast and that unless a halt is speedily called the worst may happen. This is the tone of public sentiment among the best financial exponents of our day. The *London Times* recently declared that "some even of the most devoted believers in the invincibility of the American industrial and commercial genius have begun to feel misgivings, and are admitting the need for liquidation of weak accounts for the rise, while professing satisfaction that the process is going on in order that the market may become more healthy."

The United States has locked up a too great proportion of capital in temporarily unrealizable securities, creating a position in which time alone, accompanied by a further reduction in the market values, can bring about a really healthy state of things. Capital has been absorbed in such large

amounts and in so many enterprises that money is in demand the world over. A sponge will absorb just about so much water, and then, before it will take up any more, some of the water must be squeezed out. The squeezing process is going on in Wall Street, and, though prices have dropped from five to thirty points, the water is by no means out. Those who have borrowed must pay. The banks, it is said, have been discriminating in favor of the great financial interests of New York, and have compelled certain Western speculators to liquidate some of their obligations. But unless money becomes easier, the New Yorkers will have to liquidate too. Then what will become of the gigantic syndicate enterprises still on the stocks, waiting impatiently an opportune moment to be launched?

We have heard so much about "gentlemen's agreements" and the peace of the financial world that it is almost amusing to hear that Eastern financiers have been gunning for the Western exploiters who bought up such railroads as the Rock Island and the Louisville and Nashville, holding the key to important strategic positions, with the purpose of unloading them at a good profit on the public, or on the railroad magnates of the East. The financing of great propositions has so long been regarded as the monopoly of a few New Yorkers that no Western, Southern, or Pacific-coast men, or no Canadians either, need apply. I only allude to this interesting situation because it indicates that there are still contending factions in the railroad, as in the industrial world.

"B." New York: You are right, as our books show, and are on my preferred list for one year.

"W." Wilkes Barre, Penn.: No dealings in it on any of our exchanges. Am unable to get a report.

"W." Cleveland: I would hold my Erie second preferred and Missouri Pacific, if paid for, especially the latter.

"B." Winsted, Conn.: I have so many similar requests that I must decline them all. I can only answer specific inquiries.

"M." Newark, N. J.: (1) Not rated very high. (2) Unless the money market relaxes I do not see any reason for expecting a substantial rise this year. I would get out with as small a loss as possible.

"S. W." New Haven, Conn.: One dollar received. You are on my preferred list for three months. I do not believe the market has reached its lowest level. It may fluctuate, but the water is by no means out of it.

"A. B. C." Evansville, Ind.: (1) Neither of the concerns you mention has any relation to either the regular exchanges or the "curb" on Wall Street. I should regard them as speculative and difficult to get out of in case you wanted your money at any time.

"A. B. C." Honolulu: None of the shares you mention is quoted on the exchanges. All are speculative. The Ohio and California Refining Oil Company has just announced that it has thirty-eight producing oil wells and one gas well, and so far has had the good fortune not to drill a dry hole.

"G." Syracuse, N. Y.: (1) I am told that it is. (2) Erie first preferred is the best of the Erie stocks for investment. (3) As I have pointed out before, the San Antonio and A. P. bonds are guaranteed, principal and interest, by the Southern Pacific, and therefore look cheap. (4) If prosperous conditions continue, Ontario and Western ought to be a purchase for a long pull, if bought on recessions.

"X." Norwich, N. Y.: (1) National Biscuit preferred, Diamond Match preferred, and American Chic preferred, while not gilt-edged investments, are, like Leather preferred, regarded favorably for present investment. I do not see any reason why an investor should also want the speculative common shares. (2) The coal situation has not clarified sufficiently to advise. (3) Baltimore and Ohio and Norfolk and Western preferred have merit.

## STOCKS IN REAL ESTATE COMPANIES.

The opportunities for profit in the Real Estate Market were never better. This is fully and practically illustrated by the recent \$500,000,000 realty combination and by the great fortunes being made.

If you had bought stock in one of the companies forming a part of this new combination your investment would have paid you to-day about \$5 for every \$4 invested, and in still another you could now get in return over \$65 for every \$4 invested, and have good security. This first combination of Realty Companies is only the beginning of what you will see in the next two years or more. The general public is only just beginning to realize the value of realty stocks as a means of investment. The time to buy is at the beginning. Great things are in store for those who buy now! There is no safer purchase than New York City Real Estate—it can be seen and the exact value easily found out.

My option to buy some stock at a special price in a New York Realty Company operating successfully and paying dividends at rate of 8 per cent. runs out December 30, and I will sell SOME of the shares at a discount from the company's price to investors. It will be money for you if you write to me.

THE HOME LIFE BUILDING,  
256-257 BROADWAY, NEW YORK.

Our offices occupy sixteen rooms on the fifth and sixth floors, overlooking City Hall Park, the Post-office, and Brooklyn Bridge—35 minutes from our properties.

a young man or a young woman will, in our opinion, pay them five times better than any life insurance they can possibly take out, and this \$500 can be invested at six dollars a month.

Now, won't you sit down and give us the chance of telling you our story? It won't take long, it will be interesting; we will send you some astonishing facts about New York and its marvelous growth that will interest you. You don't object to getting this, do you? All right, sit down, right now, not to-morrow—"to-morrow" ruined Napoleon—to-day, now, this minute. A penful of ink, a postal card, a minute's time, may bring you a fortune. Isn't it worth the while?

Remember, our offer also carries a free deed in case of death, a non-forfeiture agreement, a guaranteed increase of 25 per cent. within one year from Nov. 1, 1902, a free round trip to New York (east of Chicago, or like distance), the highest class of park-like improvements free, your money back with 6 per cent. interest if not found as represented. What more can we do? Send us your name to-day for full particulars.

**WOOD, HARMON & CO., Dept. AJ3, 257 Broadway, New York.**

"There is no doubt the property offered by Wood, Harmon & Co. in the 20th and 31st Wards represents one of the best investments a man of limited income can possibly make within the corporate limits of Greater New York. It can be said without hesitancy that Wood, Harmon & Co. are perfectly reliable, and are worthy of the fullest confidence of the investor, whether he resides in Greater New York or any other section of the United States. THE NASSAU NATIONAL BANK OF BROOKLYN."

An unusual opportunity for a limited number of energetic men of unquestioned reputation to act as our permanent representatives in their own communities. Write us for particulars, addressing

**"AGENCY DEPARTMENT, AJ3," as above**

### Jasper's Hints to Money-makers.

Continued from preceding page.

"X. Y. Z." Thomaston, N. Y.: Not at present.

"S." Brooklyn: I would have nothing to do with it.

"X." Worcester, Mass.: I do not advise their purchase at present.

"W." Brooklyn, N. Y.: Keep out of the market for the present.

"Suburbanite," New York: Anonymous communications not answered.

"F." Rockaway, N. J.: Two dollars received. You are on my preferred list for six months.

"E." Xenia, O.: Men of good business standing are connected with the Para Rubber Company.

"B." Duluth, Minn.: It is not dealt in on any of the exchanges, but I will endeavor to make inquiries.

"Flo." Utah: Two dollars received. You are on my preferred list for six months. A personal answer.

"T." Besaufort, N. C.: One dollar received. You are on my preferred list for three months. I would not purchase any of the shares you mention. They are dangerously speculative.

"A." Allentown City: I do not advise the purchase of the shares of the Princeton Copper Mining and Smelting Company. Inquiries at their New York office were made, but the parties could not be found.

"K." Baltimore: (1) Until the money market improves, the bears will have the better of it. (2) Leather common has been very sluggish. Quick turns are made in more active shares. There has been more speculative talk of Rubber Goods common of late. (3) Nothing worth reporting.

"H." Indianapolis: You are a club subscriber at reduced rates, not a regular subscriber at the home office at full rates, and are not, therefore, entitled to place on my preferred list. (1) Spencer Trask & Co., bankers, 27 Pine Street, New York, will send you a booklet showing dividends paid in all leading stocks, if you will inclose a two-cent stamp and mention *Leslie's Weekly*.

"N." Trenton, N. J.: Impossible to fix fair prices until doubts regarding the financial situation have cleared. All the stocks you mention would have been regarded as great bargains, at the prices given, a short time ago, but until the clouds that hang over the market are dissipated I would keep away from it.

"Spec. Toronto:" If you want to speculate in New York real estate it will pay you to look over the latest plan of that very successful firm, Wood, Harmon & Co., 257 Broadway, N. Y. If you will call or write to them mentioning *Leslie's Weekly*, you will receive without charge the full details of their very interesting propositions.

"L." Louisville, Ky.: (1) The suit against the directors of the American Malt Company, brought in behalf of the stockholders, to compel the refund of over \$2,000,000, alleged to have been improperly paid in dividends or wasted, has finally been dismissed. (2) The net income of the Baltimore and Ohio last year showed an increase of about \$1,800,000 over the preceding year.

"G." Altoona, Penn.: Foreign shipping combination, like that of the United States Shipbuilding concern, may find the financing of the scheme extremely difficult. It is only one of several other flotations which Morgan has in contemplation and which the tight money market is holding up.

"R." Chicago: (1) I doubt if American grain will be in such great demand abroad this year as

it has been in the past. The latest reports show that Europe's grain crop is above the average and Russia has its largest cereal crop on record. (2) The increase of the dividend on Norfolk and Western, placing it on a 3 per cent. basis, probably accounts for the steady rise in the shares. I would take my profit if I had one.

"Investor," Kansas City: Money is tight because we have had too much speculation in every part of the country. Perhaps the simplest explanation of the situation is told in the weekly market letter of Humphries Miller, of Pittsburgh, describing the situation in that city, which I consider to be one of the wealthiest, most prosperous and enterprising of the United States. He says that at Pittsburgh investors had been carrying enormous lines of Eastern stocks and were determined to hold them. When the decline came they sent large sums of money to Wall Street to protect their accounts. When this money was checked out of Pittsburgh, some one had to be called by the banks, and nearly every active broker had to pay off some demand loans. The only thing to do was to liquidate. This forced liquidation has been going on all over the country and many believe that it has hardly begun.

### Life-Insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *Leslie's Weekly*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *Leslie's Weekly*, 110 Fifth Avenue, New York.]

HOW MANY realize how difficult it is to lay by one or two thousand dollars for future emergencies and yet how easily it can be done by a little systematic saving. A small life-insurance policy will guarantee the accumulation of such an amount, within a certain period of years, say ten, fifteen, or twenty, and at the same time guarantee the full amount to one's wife or family, in case of his death. The beneficence of life insurance is its most impressive feature. It is easy to say that a man might set aside from year to year the cost of a small policy and keep the constant accumulations himself instead of paying the money to an insurance company, but the trouble is that most men find it difficult to save unless they are obliged to. It is so much easier to spend one's income for the necessities and the little luxuries of life than to save any part, that most persons spend all they make. If it is necessary, however, to meet stipulated payments for a life-insurance policy, this payment is reckoned as a necessity and is provided for accordingly. Every year the additional payment gives additional value to the policy, and in the course of time its owner discovers that he has a tangible asset of considerable value. If he takes an endowment policy for twenty years, say for \$1,000, he has the satisfaction and gratification of having that amount of money handed over to him in a lump sum at the conclusion of the period, which may be at a time when he needs it most. Meanwhile, in case of his death, he has left a substantial little sum for the benefit of his family. This phase of life insurance is attracting wide attention and, as a result, a larger number of small policies is now being taken out than was ever taken before.

"X." Wis.: I do not regard it as a good investment.

"B." Denver: I think well of the Provident Life and Trust Company's proposition, and prefer it to the others you mention.

"D." Elwyn, Penn.: A ten-payment, thirty-year endowment, would seem to suit your case exactly. The Prudential of Newark, N. J., will probably meet your requirements in the other matter to which you refer.

"F. B." New York: (1) It is a good form of policy to take. (2) Companies have different names for their policies, but any of the large ones, I think, will give you what you need, and all are safe. (3) I understand not.

"C." Flatbush: The payment of \$35,000 in cash to the Equitable Life would buy an annuity for a person at the age of fifty-one of \$2,316 a year. For \$40,000 he would receive an annual payment of \$2,647.30 during the remainder of his life. The money paid in, of course, would be retained by the company from which the annuity was purchased.

"H." Salt Lake City: One dollar received. You are on my preferred list for three months. Your letter should have been addressed to "Hermit," as it refers to an insurance matter, which is not in "Jasper's" department. The company mentioned has a good record, but made some profitable investments in Western lands a few years ago. My own preference would be for one of the great New York companies.

"Marietta," O.: While the company you mention has made better returns than some other the past, because of heavier interest rates on Western mortgages which it has enjoyed, it is not doing as well at present. It would be well for you to obtain the propositions of the four or five leading companies, all of them much larger than the one mentioned, before accepting the proposition of latter. You can then decide for yourself.

## SCIENTIFIC AMERICAN FOR 1903

Established 1845. AN ILLUSTRATED SCIENTIFIC WEEKLY

**FOR NEARLY  
SIXTY YEARS**

The SCIENTIFIC AMERICAN has presented to its readers in popular form the progress of science, invention and industry. No periodical contains so vast a fund of trustworthy information on timely topics of the day. Each issue is profusely illustrated. It contains articles on the subjects of special interest, on the latest discoveries in the Scientific World, on the development in Electricity, Engineering, Machinery, Automobiles, Natural History, Marine Architecture in all its branches, Yachting, etc. Furthermore, each number contains a special column of brief notes on Science, Engineering, Automobiles, etc. A Special Department on Patents is published every second or third number. This contains descriptions and illustrations of interesting and novel inventions, Personal Notes about Inventors, and Legal Decisions in Patent, Trade-mark and Copyright cases, etc., digested in a popular and readable style. Inquiries in regard to physics, hydraulics, electricity, etc., are answered free of charge in our "Notes and Queries Department." We have special correspondents in various parts of the country, also in London and Paris, who contribute to our columns weekly.

Subscription, \$3 a year; \$1.50 for six months.

**MUNN & CO., Publishers, 361 Broadway, New York**

SCIENTIFIC AMERICAN SUPPLEMENT, . . . . . \$5.00 a year.

SCIENTIFIC AMERICAN and SUPPLEMENT to one address, . . . . . 7.00

SCIENTIFIC AMERICAN BUILDING MONTHLY, . . . . . 2.50

Those subscribing now for 1903 will receive the SCIENTIFIC AMERICAN for the balance of this year without extra charge.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"Ottawa," Answer by wire.  
 "K." Baltimore: Personal answer.  
 "G." Highland, N. Y.: Better wait.  
 "F." Milford, Mass.: I would not touch it.  
 "C." Terre Haute, Ind.: Thank you for the information.  
 "D." Canajoharie: I would write directly to the bank. There is no outside market.  
 "A. B." Fulton, N. Y.: I am unable to secure quotations on it and doubt if it has value.  
 "A. J. H." New York: I would get out of my Steel common at the first favorable opportunity.  
 "Reader," New York: I would not be in a hurry to purchase, unless you are eager to speculate.  
 "H." Rochester, N. Y.: Similar suggestions have been made before. I have not the necessary room.  
 "R." Ansonia: One dollar received. You are on my preferred list for three months. W. M. Townsend & Bro.  
 "F." Brooklyn: Real estate mortgages are taxable. Hence the preference of investors for non-taxable stocks and bonds.  
 "R." Brooklyn, N. Y.: It is impossible to tell. Everything depends upon the insiders, who decline to disclose their purpose.  
 "S." Stoughton, Mass.: I do not believe in the cooperative enterprise of E. J. Arnold & Co., of St. Louis, as an investment.

"Mother, where are the little red spots you had on your face?"  
 "Gone, my darling. Sulphume and Sulphume Soap have taken them all away."

## THE REASON WHY!

## SULPHUME

is a chemical solution of Pure Sulphur, and when taken internally and applied as a lotion will cure dandruff or any skin disease; it is also a great hair invigorator. Price \$1.

## SULPHUME SOAP

stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed Soap, 25c a cake; Unperfumed, 15c a cake. Will mail trial cake upon receipt of price.

## SULPHUME SHAVING SOAP

is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

## SULPHUME LITTLE LIVER PILLS

act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

## SULPHUME BOOK

on care of the skin free.

*M.A. Day* Be sure this signature is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

## SULPHUME CHEMICAL CO.,

Suite 153, 337 Broadway, New York  
 Lyman Sons & Co., Montreal,  
 Canadian Agents.

"M." Brattleboro, Vt.: (1) I would wait a little longer, but not too long. (2) Think better of Missouri, Kansas and Texas.  
 "S." Mapleville, R. I.: (1) It would be advisable to wait until financial conditions are more settled. (2) I have heard nothing further.  
 "H." Brooklyn: C. H. Freshman & Co., bankers and brokers, 74 Broadway, New York, make a specialty of curb stocks. You can reach them by telephone.  
 "G." Camden, N. J.: I would not get into the market until the financial clouds clear a little more. Unless you are trading on the spot you are liable to be caught on either side.  
 "S." Newark, N. J.: (1) Even confidential men in such corporations are not always good advisers. Sometimes, however, they have valuable information. (2) Not rated.  
 "Doc." Detroit: Trinity and Adventure Copper shares have been manipulated by pretty shrewd gamblers. After such a decline it might be better to even up and run your chances.  
 "T." Cornwall-on-the-Hudson: The management includes men who stand well in business circles. The stock is not listed and is not dealt in on the exchange or the "curb." I am therefore not very familiar with it.  
 "D." Oshkosh: I have never advised the purchase of Republic Steel common, for it represents water, pure and simple, and with the warfare the United States Steel Corporation is waging against the independent concerns, I think still less of it.  
 "H." Toledo: I have no doubt that the Toledo, St. Louis and Western will ultimately be taken over at a good price by some of the strong railroad companies. While the earnings show little or nothing for the stock, the road has great possibilities.

"G. I. T." Philadelphia: One dollar received. You are on my preferred list for three months. Ontario and Western sold last year as high as 40 and as low as 24. You seem to be pretty well protected and I would not sacrifice it.  
 "Carolina": Four dollars received. You are on my preferred list for one year. (1) I would not sacrifice at present. If you can keep your margin up you should eventually come out all right. (2) Not at present. (3) Financially they stand well, but their advice is not always the best.

"A." Plattsburg, N. Y.: One dollar received. You are on my preferred list for three months. Baltimore and Ohio common sold last year from 82 to 115, and Canadian Pacific from 87 to 117. Both look high at present. I should think the chances are pretty nearly even at this writing.

"Jay Ed." Brooklyn: You are loaded up with highly speculative shares, excepting the Union Pacific convertibles. If you cannot maintain your margin it would be well to make the least possible sacrifice on the first sale, of any of the shares, and use the proceeds to strengthen the margins on the remainder.

"B." Cleveland: The reorganization of the American Bicycle Company will no doubt involve a decided reduction in the capital stock and an assessment on the common. It is said that the combination will increase the price of bicycles and will be in the hands of men who will conduct it on business principles.

"Cecil." Baltimore: The most conservative financiers are advising extreme caution, in the fear that money market conditions may finally culminate in a sort of panic drop all along the line. If this occurs Kansas City Southern preferred ought to be a purchase. (2) Wisconsin Central has elements of strength if prosperous conditions continue. I would not sacrifice it.

"Lady." Lexington, Ky.: The difficulty with building association stocks lies in the fact that everything depends upon the honesty of their management. The recent wrecking of the Millville, N. J., Stockbuilding Association, by the sudden disclosure that the book-keeper and secretary was a defaulter to the extent of \$105,000, shows the dangerous character of many such institutions.

Augusta, Ga.: One dollar received. You are on my preferred list for three months. (1) You cannot be too cautious in such a market. (2) American Sugar shares are dangerous to deal in. No stock is more closely manipulated by a selfish clique. It is absolutely impossible to get reliable information concerning its business. It makes no reports and does not take its stockholders into its confidence. (2) I cannot advise regarding the grain markets.

"C." Warren, Miss.: Two dollars received. You are on my preferred list for six months. I would not sacrifice my Ontario and Western if I could hold it until the anthracite situation was more clearly developed. I am told that the terrific losses of the anthracite coal roads by the strike are expected to be made up by the higher prices now being paid for coal. If they are not, the coal shares may be raised. If they have a substantial drop, you might even up on a lower plane.

 DIGESTION

At first-class Wine Merchants, Grocers, Hotels, Cafes,  
 Bijou & Co., 45 Broadway, New York, N. Y.  
 Sole Agents for United States.

"Anxious." Memphis, Tenn.: The failure of the Central National Bank, of Boston, disclosed that the doubtful paper it held aggregated nearly \$100,000 in excess of its total capital stock and surplus. I have no doubt that many other financial institutions in our great cities are cumbered with more doubtful paper than they wish they had. There is an indefinable fear pervading financial circles that this condition of affairs may lead to serious results before the liquidation is completed.

"Steel." Watertown, N. Y.: (1) Knowing that United States Steel simply represents water in the capitalization, I have never favored its purchase. It is the belief that an effort will be made to advance the Steel shares to enable insiders to unload. There is reason to believe that some have already unloaded. You must consider these facts and decide for yourself. United States Leather preferred, Child preferred, National Biscuit preferred, are regarded as among the best of the industrials at present.

"A." Newark, N. J.: (1) The house has no rating. (2) Post & Flag are rated well. (3) I have never believed in United States Steel common, but its friends still insist that it will be able to pay dividends for a year or two to come. If that is so, it will probably be advanced at some favorable opportunity, and then you can slide out. If you are paying 84 per cent. interest it would be better to pay for your stock and have it put in your name, if you can borrow the money more cheaply from friends.

"W. S." Newark, N. J.: The American Light and Traction Company was organized in New Jersey in 1901, to operate gas, electric light, and street railways. There is \$15,000,000 common and \$25,000,000 preferred stock authorized, but not all issued. The earnings last year were about twice the amount of the dividends on the preferred. Strong men are connected with the corporation and appear to believe in its future. It is operating plants in Milwaukee, St. Paul, Grand Rapids, St. Joe, Madison, Wis., Binghamton, N. Y., and San Antonio, Tex.

"Cowboy." Montana: (1) Agencies only report what the concern claims for itself, and make no comment and give no rating. The firm is not a member of the New York Stock Exchange. (2) I can obtain no reliable information. (3) The shipbuilding industry in this country is not as prosperous nor as profitable as it was. (4) Never heard of it before. (5) No; too far away. (6) Ditto. (7) I agree with you, but there is a difference even between speculating and gambling. Men speculate on what they have reason to believe may happen. Men gamble on "any old thing."

"Banker." Louisville: (1) I have no doubt that the railroads, having advanced the wages of their employees, will seek justification for an advance in freight rates, with an expectation that the working masses will stand by them in case of a granger uprising against the railroads. In my judgment the railroads are counting on false hopes. (2) I have pointed out long ago that the public would not be inclined either to purchase or hold high-priced stocks when they found that they were netting less than the ordinary rate of interest paid by a savings-bank. They are much less inclined to hold when in the open market money commands over 6 per cent.

"B." Grand Rapids, Mich.: One dollar received. You are on my preferred list for three months. (1) I anticipate a lower level, unless the money market relaxes before New Year's Day. (2) Not until the liquidation has been more complete. There must be a new low level before there is much of a general rise. (3) The Commercial and Financial Chronicle of New York. (4) A little booklet showing stock fluctuations, and dividends, published by Spencer Trask & Co., 27 Pine Street, New York, will be sent you without charge, on receipt of a two-cent stamp, if you will mention LESLIE'S WEEKLY. It is reliable. (5) I can only answer specific inquiries.

"Montana": There is a deal of difference between unloading Amalgamated at 120 and at less than half that figure. Usually, at the lower price, the process is reversed and insiders take back their shares and prepare for an advance. Furthermore, it is more difficult to depress a stock after the price has been cut in two, because holders at the lower range are usually both determined and able to maintain their holdings. I have no doubt that if the Amalgamated crowd thought they could drive Heinze to the wall by marking the stock down, they would do so. But if they did, Heinze and his friends might step in and take away control from the Standard Oil people. This is one of the reasons why the price will probably not be allowed to go too far down.

"B." St. Paul: (1) Ontario and Western around 29 would be regarded as a fair speculation for a long pull if we could only measure how much of a loss the anthracite coal strike has caused and the possibilities of the failure of the arbitration plan and the resumption of the strike. (2) Chicago and Alton is heavily capitalized, and though it is claimed that over 3 per cent. is being earned on the common, no one believes it is on a dividend-paying basis. (3) I think better of low-priced railroad shares than of Steel common for a long pull. You should be a regular subscriber at the home office, to be entitled to a place on my preferred list. You can send the paper to any address you please, your own or a friend's. The information is certainly worth what it will cost you.

## CHRISTMAS DIAMONDS On Credit

The \$5 or \$10 which you would pay for a cheap and trashy gift for the loved one a Christmas, would make the first payment on, and secure the immediate delivery of a beautiful Diamond ring, brooch, brooch, earrings, stud, scarf pin, cuff buttons, watch or other article selected from our million dollar stock. A Diamond is a gift that will last forever and every day has a well-spring of delight to the wearer, and a perpetual reminder of the giver and his generosity.

**HOW TO DO IT:** Send for our latest issue, new illustrated Catalogue which shows thousands of beautiful things for Christmas—all goods being reproduced by photographs—select what you like and we will send it to your home, place of business or Express office, where you may examine it critically. If you like it and want to keep it, pay one-fifth of the price and send us the balance in eight equal monthly payments.

**REMEMBER:** We pay all Express charges, give a written guarantee with every Diamond; make liberal exchanges, allowing the full price paid in exchange for other goods of larger Diamond, or cheerfully refund all that you have paid, if the goods are not entirely satisfactory.

**IT IS SAFE** to send us money with order, but you need not pay a penny until you get the goods if you prefer not to do so. We are the largest house in the world in our line of business and one of the oldest—Established in 1858. Our references are any bank in America. For instance: Ask your local bank how we are rated in Dun's Real Estate & Finance Directory. You will find we are rated as the top in credit, promptness and responsibility.

All you need to do is to make a selection, and enjoy all the advantages of our Liberal Credit System. There is nothing disagreeable to be disappointed, no publicity, delay, anxiety, interest, or to fact anything that you need not experience in shopping at your home store. Our catalogue explains every feature of our system, terms, goods and prices; is a work of art and worth its weight in gold to all our Christmas purchasers. A postal card today will fetch it.

**TO CASH BUYERS:** If you want to buy a Diamond for cash, we will allow you a discount of eight per cent. Wear it one year or less, then if you wish, bring it back and get your cash for all you paid—less ten per cent. the reasonable cost of doing business. For instance: Suppose you buy a fifty dollar Diamond and wear it one year, you could then send or bring it back and get \$45 in cash. It will then cost you but \$5 to wear a splendid Diamond a whole year, or less than ten cents per week. This is only one of the many unique and liberal innovations originated by us in selling diamonds to distant customers. We make every transaction kindest, satisfactory and absolutely safe, for we will cheerfully refund any money sent, if goods are not exactly what you desire.

Write today for our catalogue, or tell us what you wish. We like to have you send for your examination. There is no time to lose, for very soon we will be overwhelmed with rush Christmas orders from every corner of the country. Do not wait until the rush begins.

## LOFTIS BROS. &amp; CO.,

Diamond Importers and Manufacturing Jewelers.  
 Dept. 5-A 93, 94, 96 and 98 State Street,  
 Chicago, Ill., U. S. A.  
 Opposite Marshall Field & Co.

"T." San Francisco: Four dollars received. You are on my preferred list for one year. (1) My letter is sent on the date indicated at the bottom of it. (2) It looks as if Mexican Central had had all the rise it is entitled to at present. (3) It depends upon whether the pool in Southern Pacific has liquidated or not. As the Standard interest was acquired at something below 50, many believe that that is the bottom price. (4) The pool are for the most part badly crippled, some of them worse than the public has been allowed to know. (5) You can judge for yourself. They are in the market to make money. (6) They usually favor interests with which they are identified. (7) Yes, if you can deal with reliable parties. (8) Yes, at such times especially. If you leave your shares in a broker's name he sometimes makes a profit by loaning them.

# I Will Cure You of Rheumatism

Else No Money Is Wanted.

After 2,000 experiments, I have learned how to cure Rheumatism. Not to turn bony joints into flesh again: that is impossible. But I can cure the disease always, at any stage, and forever.

I ask for no money. Simply write me a postal and I will send you an order on your nearest druggist for six bottles Dr. Shoop's Rheumatic Cure, for every druggist keeps it. Use it for a month and, if it succeeds, the cost is only \$5.50. If it fails, I will pay your druggist myself.

I have no samples, because any medicine that can affect Rheumatism quickly must be drugged to the verge of danger. I use no such drugs, and it is folly to take them. You must get the disease out of the blood.

My remedy does that, even in the most difficult, obstinate cases. No matter how impossible this seems to you, I know it and I take the risk. I have cured tens of thousands of cases in this way, and my records show that 30 out of 40 who get those six bottles pay gladly. I have learned that people in general are honest with a physician who cures them. That is all I ask. If I fail I don't expect a penny from you.

Simply write me a postal card or letter. I will send you my book about Rheumatism, and an order for the medicine. Take it for a month, as it won't harm you anyway. If it fails, it is free, and I leave the decision with you. Address Dr. Shoop, Box 943, Racine, Wis. Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

## Business in South Africa.

THE Bureau of Foreign Commerce has received a letter from C. W. Hewitt, of Ladysmith, Natal, South Africa, saying that he is contemplating the establishment of a business in general groceries, men's outfitting, books, stationery, etc., and wishes his name brought to the United States exporters of these lines.

## OFFICIAL LEGAL NOTICES.

# DEWAR'S SCOTCH WHISKY

For ye Holiday Cupboard

### Yielded to Temptation.

"Sometimes," reflected the Reverend E. Z. Streeter, looking over his small but fashionable congregation. "I doubt whether I ever had a genuine call to preach. I am afraid it was only a temptation."

### The Supper Did Him Good.

"I am sorry, doctor, you were not able to attend the church supper last night; it would have done you good to be there." "It has already done me good, madam; I have just prescribed for three of the participants."

THANKSGIVING IN ENGLAND FOR SOVEREIGN'S RECOVERY  
King Edward, lately critically ill, and his Queen attend solemn service at St. Paul's Cathedral, London.

## Australia's New Railroad.

CONSUL-GENERAL J. P. Bray writes from Melbourne, Australia, that he has received a letter from Mr. J. J. Rendel, secretary of the North Australian League, Melbourne, relative to a proposed transcontinental railway from Adelaide, South Australia, to Port Darwin, North Australia, and expressing the wish that the matter be brought to the attention of capitalists and railroad plant builders in the United States. The South Australian government, Mr. Rendel says, will introduce a measure in Parliament offering capitalists facilities to build this line.

## Golden Gate Tours

UNDER THE PERSONALLY-CONDUCTED SYSTEM OF THE PENNSYLVANIA RAILROAD.

CALIFORNIA and the Pacific Coast resorts have become so popular in recent years with the better class of winter rest and pleasure seekers that the Pennsylvania Railroad Company has decided to run two Golden Gate tours this winter, one to include the famous Mardi Gras spectacle at New Orleans. On the going trip both tours will travel by the Golden Gate Special, one of the finest trains that crosses the continent. One tour will return by this train, while passengers by the other and later tour will use regular trains returning. In California, passengers will be entirely at their own pleasure in the matter of itinerary. Should a sufficiently large number of passengers desire to join in taking an itinerary suggested by the Pennsylvania Railroad Company, the services of a Tourist Agent and Chaparron will be at their disposal.

The first tour will leave New York, Philadelphia, Baltimore, Washington, and other points on Thursday, January 29, and will travel via Chicago, Kansas City and El Paso to Los Angeles and San Diego, arriving at the latter point February 24. An entire month may be devoted to visiting California resorts, the Golden Gate Special leaving San Francisco on the return trip Tuesday, March 24, and returning via Salt Lake City, Glenwood Springs, Colorado Springs, and Denver. The rate for this tour will be \$300, covering all expenses of railroad transportation, including side trips in California, as well as berth and meals on the Golden Gate Special going and returning. No hotel expenses in California are included. Tickets are good for return trip for nine months, excepting that passengers who do not return on the Special must provide their own Pullman accommodations and meals eastbound.

Tour No. 2 will leave Thursday, February 19th, by the Golden Gate Special, Cincinnati, Montgomery, and Mobile will be visited en route to New Orleans, where the party will stay during the Mardi Gras festivities. The train will be side-tracked for occupancy during the three days spent in New Orleans. Stops will also be made at Beaumont, Texas, Houston, Texas, San Antonio, and El Paso. The train will arrive at San Diego, February 28th. So far as special train arrangements are concerned, this tour will be completed at San Diego. Passengers may dispose of their time in California as they see fit. Should a sufficient number desire to take a suggested trip through California, the services of a Tourist Agent and Chaparron will be placed at their disposal.

The rate for this tour will be \$275, covering all railroad transportation for the entire trip, including side trips in California, seat at the Mardi Gras Festival, and Pullman berth and all meals on the Golden Gate special from New York until arrival at San Diego.

Private compartments, i. e., drawing-rooms or state rooms, may be obtained by the payment of additional charges on both tours. A detailed itinerary is in course of preparation, giving all information concerning these tours. Application should be made to George W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia, Penn.

## Special Prizes for Amateur Photographers.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not. N. B.—Communications should be specifically addressed to "Leslie's Weekly," 110 Fifth Avenue, New York. When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

For coughs and colds, the best remedy is Pisco's Cure for Consumption.

## Where Mental Science Failed.

"Do you think this train will get through on time?" asked the nervous passenger.

"I'm trying to think it," answered the conductor. "I've been trying to think it ever since I went to work. But mental science doesn't seem to do much good on this road."

If you are going hunting, you should provide yourself with **Cook's Imperial Extra Dry Champagne.**

**Advice to Mothers:** Mrs. Wagoner's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhoea.

This new Solmer Piano Factory occupies eight large lots, situated a short distance from the old Street ferry at Long Island City. In building the factory the firm has spared no expense, and can safely claim to possess the most perfect piano-forte house in the United States.

Use **BROWN'S Camphorated Saponaceous DENTIFRICE** for the TEETH. 25 cents a jar.

## Best for medicinal uses

Your physician will tell you that you should always have some good whiskey in the house. For accidents, fainting spells, exhaustion, and other emergency cases, it relieves and revives. But you must have good whiskey, pure whiskey, for poor whiskey, adulterated whiskey, may do decided harm. **HAYNER WHISKEY** is just what you need for it goes direct from our own distillery to you, with all its original strength, richness and flavor, carrying a **UNITED STATES REGISTERED DISTILLER'S GUARANTEE OF PURITY AND AGE** and saving the dealers' enormous profits. We have over a quarter of a million satisfied customers, exclusively family trade, who know it is best for medicinal purposes and prefer it for other uses. That's why YOU should try it. Your money back if you are not satisfied.

**Direct from our distillery to YOU**  
Saves Dealers' Profits! Prevents Adulteration!

## Mayor Low's Difficult Task.

THE CITIZENS' UNION of New York has performed a valuable and timely service for the cause of good municipal government by giving to the public a brief summary, based on its own investigations, of what has actually been accomplished in the several departments of the present municipal administration since Mr. Low became mayor ten months ago. The showing is timely because there has been of late a growing disposition even among many persons entirely sympathetic and friendly toward the Low administration to question whether as much progress had been made in remedying the old abuses fastened upon the city by its former Tammany rulers as might reasonably have been expected. The array of facts and figures submitted by the Citizens' Union answers this question in a very satisfactory way. The proof thus furnished ought to be convincing on the main point, as to the general excellence of Mayor Low's conduct of affairs, to all who are open to conviction on that subject.

We do not deny that Mayor Low has made mistakes and committed, perhaps, serious blunders. Being human himself and having to work through human instrumentalities, many not of his own choosing, that also was to be expected. But we do affirm that, considering the conditions prevailing when he entered office as mayor of the greater New York, the tremendous difficulties involved in readjusting and reorganizing the administrative machinery of a city of nearly four million people, the hindrances and embarrassments, some inevitable and some unexpected, thrown in his way by existing laws and ordinances, and by the action of both his open enemies and his alleged friends, and more than all, the comparatively brief time he has had to work out his plans and purposes—in view of all these circumstances and conditions, we doubt if any living man placed in a similar position and with similar limitations upon him could have done better than Mayor Low has done; could have been able at this date to give a better account of his stewardship than Mayor Low is able to give at the end of ten months of his administration.

Nothing is easier than fault-finding with public servants; nothing easier than sweeping charges and wholesale accusations such as are now being made against the Low government, to the effect that corruption in the police department is as prevalent as it was in Tammany days; that vice and crime are even greater in volume and more obtrusive; that wastefulness and extravagance are marking the course of the administration to an extent hitherto unknown. Specific evidence is adduced by the Citizens' Union to show that one and all of these charges and accusations are either gross exaggerations or absolutely untrue. The police department, which comes in for the most severe criticism, is still far from what it should be and undoubtedly from what it would be if Mayor Low had been allowed a free hand in its reorganization, and not been tied up by certain laws from ridding the department of evils and abuses fastened on it by long years of Tammany domination. Even with these handicaps upon him, Mayor Low has made much real and substantial progress in police reform and is slowly, but none the less surely, bringing about a state of affairs here that will fulfill every just and reasonable expectation. If all is not accomplished in the betterment of police conditions by the close of his term that was hoped for at the utmost, the fault will be chiefly with the absurd and vicious law limiting the term of the mayor of New York to two years. This same foolish charter provision must be held responsible for the incomplete and disappointing condition in which other reforms will doubtless be found at the end of Mayor Low's term. No man not endowed with miraculous powers can do in two years what in all reason and common sense he should be given not less than six years to perform, and we are glad to observe that in his very timely and suggestive remarks at the recent Republican Club dinner, Governor Odell earnestly commended the course of Mayor Low.

It is now predicted that Tammany will swing back into power again at the end of Mayor Low's term. This is the boast of his enemies and the lugubrious prophecy of the croakers and malcontents among his former supporters. The enormous vote for Coler in greater New York is said to point unmistakably to the recrudescence of Tammany. Perhaps it does. But if New York returns to the mire of Tammany government again in 1903 it will not be the fault of Mayor Low and his associates in the present administration. They have done, and are

doing, all that it is possible to do, humanly speaking, to carry out the platform on which they were elected. They are giving the city honest government; they are spending the people's money for the people's benefit and not for the benefit of their own pockets; they are administering every department of the government in a spirit and manner worthy of an enlightened and civilized people.

If the metropolis is turned back from this path of promise and progression, and plunged again into the old wallow of ignorance, incompetence, filth, and brutality of Tammany domination, it will be chiefly the fault of that body of citizens who, while they helped to elect Mayor Low, are doing all in their power to obstruct his work and defeat his purposes by their petulant fault-finding, their uncharitable, unjust, and needless criticism, and their absurd and unreasonable demands.

## A Treat for Leslie's Readers.

THE Christmas number of *LESLIE'S WEEKLY*, which will appear on December 18th, will have unusually attractive features. The cover, in beautiful colors, presents a picture of Santa Claus at the telephone. A large picture puzzle, for the solution of which \$100 in prizes is offered, will prove of the utmost interest to every reader. A unique feature will be an entire page of handsomely illustrated Christmas postal cards, and which can be utilized as holiday remembrances and sent by mail to friends at home or abroad. Additional special features will include the last story, "A Gold Mine in Africa," written by George Alfred Henty, the world's best writer of tales of adventure for boys, whose untimely death at Weymouth, England, occurred recently, and "My First Offense," a delightful sketch by Joaquin Miller. The illustrations will comprise a brilliant cover, designed by Milton Bancroft; "Raptures of Christmas Morning in the Nursery," by Miss Maria Kirk, a skillful picture of child life; "Stealing a Glimpse of the Christmas-tree," a spirited drawing by Gordon H. Grant; "A Wireless Christmas Greeting in Mid-Ocean," an ingenious effort by Eliot Kean; "A Reminiscence of the Campaign in China," by Sydney Adamson, who has traveled much; a page of animal pictures, by Frank Verbeck, of "bear"-drawing fame; and also drawings of much merit by Hy. Mayer, William Clarke, Miss F. L. Boughton, W. H. Hyatt, and others. Experts with the camera, among them being L. L. Roush, Underwood & Underwood, Sarony, Luckey, and Dunn, will contribute pleasing photographs. Besides the letterpress already mentioned there will be a Western story of intense interest, "The Madam of Cattleland," by the rising novelist, Gertrude Potter Daniels; an entertaining tale, "The Response of the Oracle," by Roselle Mercier Montgomery; a touching story of childhood in the slums, "Esther's Strange Christmas," by John Mathews; and stories and articles of holiday interest, by Harry Beardsley, L. A. Maynard, Oliver Stodd, Rodney Blake and others, with delightful poems by Minna Irving and Edward W. Barnard. A number so replete with good things must commend itself to every household.

## A Wonderful Congressional Canvass.

NOT IN two-thirds of a century, except in 1866, did the dominant party of the nation make as good an exhibit in a congressional canvass, as compared with the congressional election of the presidential year immediately preceding, as the Republicans did in 1902. The Republican majority in the House of Representatives chosen with McKinley and Roosevelt in 1900 was forty-one. It will be thirty in the House which was elected in 1902, the Republican vote in that body being 208 and the Democratic vote 178.

The party that holds the presidency invariably loses some votes in the House of Representatives chosen two years after the presidential canvass, as compared with the House that enters into power with the President. Often the loss is so great in the mid-presidential year congressional elections as to turn the House against the President during the second half of his term. This was the case in 1874 with Grant, in 1882 with Arthur, in 1890 with Harrison, and in 1894 with Cleveland, to go no further back than a quarter of a century. Even in the middle of the Civil War, when a person in the Northern States had to be either a Republican or a war Democrat on the one hand or a Southern sympathizer on the other, the Republican majority in the House of Representatives was cut down so much in the election of 1862, in the middle of Lincoln's first term, that for a day or two after the election there was a fear that it had been swept away altogether.

Every President, since parties took their modern shape back in Jackson's days, had the House of Representatives with him when he entered power, except Taylor in 1849 and Hayes in 1877, the Whig in the first case and the Republican in the second being confronted with a Democratic Congress when he began his term, and the Democrats made a large gain in the second election of the term in each case. In the congressional election of 1866, when the Republican majority of ninety-nine in the House, elected in 1864 with Lincoln and Johnson, was cut down only to ninety-three, the Republicans were aided by the wild assaults made upon them by Johnson in the feud between Congress and the President which started in the latter part of 1865, a few months after Lincoln's death sent Johnson to the presidency.

But the election of 1902 was immeasurably more remarkable in this respect than was that of the off year of 1866. Apparently the Republicans made no especial effort to roll up a large vote. There was a complaint, in fact,

about apathy in the canvass, and apathy, when it comes, invariably hits the party in power. Yet the Republican vote in the House of Representatives, as compared with that in the House elected two years earlier, at the beginning of the presidential term, was cut only one-fourth, or from a majority of forty-one in the Congress of 1901-03 to a majority of thirty in that of 1903-05. Such an exhibition of party virility and potency has never before been seen in a mid-presidential term congressional canvass since the triumphant Democracy in 1834, in the middle of Jackson's second term, under the inspiration of Jackson's leadership, overwhelmed the elements which were beginning to shape as the Whig party.

The congressional election of 1902 was a magnificent tribute to the strength of President Roosevelt with the masses of the American people, for the victory was a Roosevelt victory, as the defeat, if there had been any, would have been called a Roosevelt defeat.

But the Democratic party, in the opinion of its ablest leaders, is better off without a majority in either house of Congress just now. The responsibility of the government is left entirely to the Republican party, and it will be held solely responsible for all mistakes and shortcomings. It is unnecessary to add that failure to meet this responsibility may endanger Republican success in 1904.

## The Plain Truth.

IT WAS a good idea of Governor Odell to appoint a commission to inquire into the delays and expenses in the administration of justice in the counties of New York and Kings in the First and Second Judicial Districts and also suggest legislation thereon; and the personnel of the commission appointed leaves nothing to be desired. But it is to be hoped that such remedies as the commission may suggest or recommend for abuses of court procedure in the districts named will be applicable to the same abuses as they exist elsewhere. Cases of Jarndyce and Jarndyce are by no means limited to the courts of England nor to those of New York and Brooklyn. It was only the other day that the judge of one of the higher courts in a neighboring State remarked in our hearing that, given a case where wealth commanded a powerful array of able lawyers on one side and a poor man stood alone on the other, the chances were that the latter would be wearied out or compelled to yield by the burden of expense made necessary to maintain his contest to the end. He saw no remedy for such abuses, but if none exists one ought to be called into existence.

IT IS ONLY a little "straw," perhaps, and yet, such as it is, well worthy the careful attention of all who would mark the way the political winds are blowing, that the Socialist vote in Massachusetts at the recent election showed a gain of more than 200 per cent. over the same vote in 1901, while the gains of the same party in several other States were also great. In New York the vote was nearly doubled. In Pennsylvania the Socialist vote last year was 4,000; this year it was 20,000. In Ohio it has grown from 4,800 to 15,000. In Montana the vote last year was 500; this year it was 5,000. The estimated Socialist party vote throughout the entire country is 250,000. This does not mean that all the principles and policies espoused by the Socialists are right, nor that there is any probability, immediate or remote, that Socialism will ever become a dominating power in national politics. We do not believe anything of the kind. This remarkable increase of Socialist votes may mean, however, that there are some elements of truth and righteousness in the Socialist platform, that some of the demands there made are just and worthy of serious thought and attention. It is reasonable to assume that a cause which has made such rapid progress in a single year and was able to command the votes of 250,000 American citizens is not altogether vicious and reprehensible.

WE HAVE not been able to share the indignation, although we do not question the sincerity and disinterestedness, of the delegation of New York hotel and business men who waited on Mayor Low the other day with a petition in behalf of Fire Chief Croker's retention, and were refused an audience. Aside from the lack of discretion and good taste displayed in presenting a petition bearing upon a case under process of adjudication before an official appointed by the mayor and subject to his orders, we may well question whether any public official is called upon to attach much weight to petitions, especially such as are worked up in the hasty, inconsiderate, wholesale fashion so common nowadays. Human nature seems to be weak on its signature side, and petitions a mile or less in length can be gotten up by almost any one for almost any object, providing enough "nerve" and persistence are put into the business. It is to be remembered that a subscription paper for a monument to Tweed received the signatures of many excellent people, even after that person's iniquity had been exposed and made known to all the world; and the guilty city chamberlain of the Tweed regime found certain highly honorable citizens—to their subsequent shame and confusion—ready to vouch for his accounts. In fact, public petitions have come to be regarded by many people as they do patent, medicine testimonials to which Kings, Queens, and doctors of divinity so freely give their names and often their photographs, and one carries about as much weight as the other. It is most amusing to observe that some of the politicians who have been denouncing Mayor Low for not turning out Tammany's office-holders have been abusing him for having permitted the charges against Tammany's chief of the fire department to be brought to a hearing. From the talk of some of his defenders one would imagine that Fire Chief Croker was the only man capable of filling the place. Nonsense!

## PEOPLE TALKED ABOUT

THAT FLAME of murderous hate for all "infidel dogs" which ever burns like hidden lava underneath the

MR. D. J. COOPER,  
The missionary recently murdered  
in Morocco.

surface of orthodox Mohammedanism found an outlet, as it often does, in a deed of blood a few weeks ago in the streets of Fez, the ancient capital of Morocco. The act was committed by a fanatical *shereef* who had vowed that he would kill the first Christian who should pass him. This happened to be Mr. D. J. Cooper, a missionary at Fez. Mr. Cooper, with two companions, was standing in the marketplace of Fez buying some matting, when suddenly and without the slightest provocation the *shereef* in question ran out to the door of the Karnein mosque and shot Mr. Cooper with a pistol, inflicting a wound that proved fatal. The news that a Christian had been murdered quickly reached the ears of the Sultan of Morocco, and orders were at once given that the murderer should be brought before his Majesty personally. Meanwhile the assassin had fled to the Mulai Edrees, a saint's tomb, just outside the city walls, the holiest place in Morocco, and the sanctuary from which murderers defy justice. He was, however, dragged forth by the Sultan's direct orders and taken to the palace. He made no secret of what he had done, but declared that he would kill all the Christians. The Sultan gave orders that the murderer should be placed on a mule and driven through the streets as an object of public execration. He was then publicly executed. Gratifying as was the prompt action of the Sultan to the Europeans, it has caused immense feeling among the Moors. Such a thing as any one being dragged out from Mulai Edrees to be executed has never been known in Morocco, and in such a community to punish a Moor for so pious an act as killing a Christian is in itself enough to rouse public indignation, more especially as the murderer was a "holy" man. It is feared, therefore, that the act may start a wave of fanatical and murderous passion which will imperil the lives of many other Christians in that country.

IT IS A well-known fact that Tennyson had a special dislike for interviewers, and during the later years of his life was moved to adopt extraordinary measures to protect himself from the gaze of lion-hunters and other curious people. It is not altogether pleasant to be told by a writer in *Temple Bar* that American visitors were the most persistent invaders of the privacy of the poet in his Isle of Wight home. Being acquainted with the poet's habits of quietude and privacy, and the unlikelihood of catching sight of him by fair means, they threw courtesy to the winds and climbed wall and hedge. A pretty little summer-house in an outlying part of the grounds was gradually torn to bits and carried away in souvenir fragments. There was, however, a trap for the unwary in the person of an old man, a taxidermist of Freshwater, who increased his singular personal resemblance to Tennyson by adopting the same garb. This consisted of a huge soft felt hat, whose brim approximated to the proportions of a small umbrella, and a voluminous cloak, which marked genius in every fold. Thus equipped, the "double" was accorded the eager recognition of strangers, and enjoyed a vast deal of that homage so distasteful to its authentic recipient. It is not stated that the "double" ever essayed to write poetry.

FOR MUCH of the light which in recent years has been shed upon the civilization of ancient Babylon, that most wonderful city of the olden time, the world is largely indebted to the labors of Professor Herman V. Hilprecht, of the University of Pennsylvania, who has recently returned to this country after an absence of a year and a half spent in study and research among the ruins at Nippur and other parts of Babylonia.

PROF. HERMAN V. HILPRECHT,  
Famous American Assyriologist just  
back from an exploring tour.

Professor Hilprecht was a member of the first archaeological expedition into Babylonia undertaken twelve years ago and led by Dr. Peters. On that occasion he was successful in unearthing and recovering over 2,300 precious tablets and cylinders in the ruins of the Temple of Bel, the inscriptions on these revealing the life of the Assyrian people as far back as 4000 B. C. The ruins at Nippur cover about two hundred acres and offer, perhaps, the richest field

now known for Biblical archaeology. Evidences of the Jewish captivity have been found here by Professor Hilprecht in the shape of bowls containing figures of demons alleged to have been sent to torment the Jews, and every inscription on these relics bears the words, "In the name of Jehovah, Amen." On the occasion of his recent and latest visit in the East, Professor Hilprecht employed himself in examining and deciphering tablets secured from the ruins of Nippur. Many of these antiquities were stored in the Imperial Ottoman Museum at Constantinople, and Dr. Hilprecht spent some time organizing a Semitic section by request of the Sultan. A magnificent collection of tablets and other valuable relics has been presented by the explorer to the University of Pennsylvania, under whose auspices the later expeditions have gone out, and he is now giving a series of lectures before the university on the results of his work. Professor Hilprecht is known and honored throughout the learned world for his remarkable achievements in archaeology and has received numerous distinctions from European rulers and scientific societies. He is a native of Germany, where he was born in 1859, and received his education at the universities of Leipzig and Erlangen. He was called to the chair of Assyriology in the University of Pennsylvania in 1886. Professor Hilprecht is the author and editor of numerous volumes on cuneiform inscriptions and allied subjects and is regarded as the founder of Babylonian palaeontology and the foremost authority on all questions concerning the earliest civilization and history of the Euphrates valley.

ALTHOUGH THERE are many instances on record of persons who attained the altitude of giants, contemporary cases have always been sufficiently rare to excite interest and wonder. The latest name entered on the list of men of excessive stature is that of Edward Beaupre, of Willow Branch, Northwest Territory, said to be the tallest human being now alive. Beaupre is

EDWARD BEAUPRE,  
Of Willow Branch, N. W. T., the tallest man in the world.—Wright.

eight feet three inches in height and weighs three hundred and seventy pounds. He wears a number ten hat, a twenty-one-inch collar, and a number twenty-two shoe. His hand is eleven inches long and his chest measurement is fifty-six inches. Although he is already pretty large, yet, as he is only twenty-one years old, the chances are that he will add several inches to his present height before he stops growing. The young man's abnormal size was not inherited from his parents, for his father is only five feet eight inches tall and his mother but five feet four inches. He is of French descent and finds it difficult to express himself in English. Until two years ago his occupation was that of a cowboy, but he had to abandon that line of work on account of his increasing tallness. It seems probable that like others of his class Beaupre will yet drift to the circus or the museum as the means of earning a livelihood.

THE NOTION that Lord Kitchener, of Khartoum, and also of Pretoria, is a woman-hater has been pretty well disposed of by the doings of the hero himself since he returned from South Africa, but there can be no doubt of his opinion of the "womanish" man. On his return from Egypt a young social top asked the general for his autograph, which he intended to have worked in silk on a flimsy lace handkerchief he took out of his pocket. Kitchener took up the scented handkerchief, with the remark: "Your sister's, I presume?" "No, sir; my own. A very pretty pattern, isn't it?" replied the young lord. "Very," answered Kitchener; "what is your taste in hairpins?"

COLONEL M'INNES, inspector-general of the police force of the colony of British Guiana, has a strong penchant for the "garb of old Gaul." The kilt had not been seen in the city of Georgetown within living memory, and when he made his appearance on the street a few hours after his arrival recently, attired in the airy cos-

tume of the Highlands, his appearance gave rise to much excitement among the old negroes selling fruit and cake in the market square. "My gracious!" ejaculated one of them, "see the noble cunnel, as how he traps no corn in 'teamboat with him, an' he have to wear dem petti coat, fo' true."

THE WISE observation of the spelling-books to the effect that times change and men change with them

finds an apt illustration in the fact that whereas only sixty years ago laws were existent in England which prevented a Jew from holding any public office, civil, military, or corporate, this year of 1902 sees a Jew holding the high and honorable office of Lord Mayor of London, the chief city of Christendom and the world. And this official, whose name is Sir Marcus Samuel, is not only a Jew in name but one in fact, an earnest and devoted adherent of his faith. He has come to his present dignity not, of course, by reason of his religious affiliations, but because of his special fitness for the post, gained by extended business knowledge and by long experience in public life and a wide and intimate acquaintance with municipal affairs. Sir Marcus has traveled widely in the far East and Japan and it was during his wanderings there that he established the great trading firm of which he is the head, and which now has in its business a fleet of thirty-eight steamers. He first introduced the transport of petroleum in the bulk through the Suez Canal. He is a deputy-lieutenant of London, was sheriff in 1894 and 1895, and has been Alderman since 1891. He was knighted in 1898 by Queen Victoria for valuable public service. As Lord Mayor of London he will hold office for one year with a salary of \$50,000.

SIR MARCUS SAMUEL,  
The Jew who is the honored Lord  
Mayor of London.

THE MANY friends of Professor George F. Jewett whose work in connection with Lassell Seminary at Auburndale, Mass., has won the highest praise will be glad to hear that he has established the Mt Ida School for Girls at Newton, Mass., occupying two large sunny buildings in that garden city of New England only seven miles from Boston. We know of no more pleasant home for the development of mind and body or for the training of girls in mental, physical, and moral culture than that which Professor and Mrs. Jewett have established in one of the most healthful locations in a New England. The certificate of their college preparatory course will admit students to college without further examination. The general course of the new institution will provide special work, such as the parents of the pupils may particularly desire, and no examinations for entrance are required.

OF MR. JOSEPH CHAMBERLAIN, the British Colonial Secretary, who is now visiting South Africa with his wife, the English papers are telling some good stories which, perhaps, they would not feel at liberty to tell were that doughty official nearer home. One of these relates to a gathering which Chamberlain attended once while a guest at the British legation in Washington, where an American girl said of him: "He is nice enough, but he doesn't know how to dance. He takes such a short step that you think he must have practiced on a postage stamp." It was during this visit at Washington the Chamberlain met Miss Endicott, who afterward became his wife. "I was fortunate enough to make two treaties said Mr. Chamberlain to his Birmingham friends on his return. "I had my secret document, with which you are all familiar, and I am glad to say that even the august Senate of the United States had nothing to say to its private negotiations."

PEOPLE IN Troy, N. Y., think they have the handsomest lassie in all the Salvation Army. Miss Bertha Conklin, a native of Troy, has been a soldier in the Salvation Army in that city for three years.

Her flaxen hair and clear blue eyes, in the setting of the dark colors of the Salvation Army uniform, give her even more charm and piquancy than are revealed in the portrait presented herewith. The Salvation Army in Troy occupies an imposing and commodious structure of brick, given through the generosity of the late William H. Rowe, a wealthy knit-goods manufacturer. In the work of the organization the pretty Salvation Army lassie does her full share, and her bright and attractive face causes many to turn and look at her the second time as she goes about the city on the errands of loving duty to which this strenuous army of the Lord is dedicated.

MISS BERTHA CONKLIN,  
A Salvation Army beauty in the city  
of Troy, N. Y.

# Review of the Eastern College Football Season

Charles Edward Patterson

SOME FOOTBALL teams are born great, some achieve greatness, and some—but that's another story. The Yale football team of 1902 was born great—there can be no doubt of that. No team in the history of football has started with such material and so great an opportunity. Plenty of heavy, active, mature, experienced forwards, and, to fill the vacancies, a group of freshmen who were virtually veterans. In physical strength Captain Chadwick's team was quite equal to Gordon Brown's, and in versatility of attack, to say nothing of its kicking game, was distinctly more formidable. It must be written high on the tablets of Yale's football fame. The weight of the rush line was admirably distributed from end to end, whereas, at both Princeton and Harvard, the balance was not so good. The team was formidable all through the season, except on November 1st, when, tired out from five weeks of hard driving, it was tied by West Point's sprightly eleven. Two weeks of comparatively easy practice, however, brought the team up to the mark, and it defeated Princeton, 12-5, in a fierce game, and Harvard, 23-0, in a driving contest a week later.

The highly spectacular Yale-Princeton game showed far better football on both sides than the 1901 game produced. Yale gained 321 yards by rushing (scrimmages only), including Chadwick's two long runs for touchdowns; and Princeton, usually kicking on the first down, gained but 59. In the second half, Princeton, to quote a Yale authority, "played harder and better than in the first half, although with little hope of winning the game, and by magnificent defense compelled Yale fully to earn every yard gained." The kicking game on both sides was a treat. De Witt, who, for distance and direction, has had no superior in the history of the game, punted 16 times for 770 yards in the clear, an average of 48 yards; and Bowman punted 12 times for 520 yards in the clear, an average of 43 yards. Added to this was De Witt's beautiful field goal from the 48-yard line. In the Yale-Harvard game the Yale attack was no fiercer than against Princeton, but it worked smoother, for the Harvard forwards were somewhat slower in charging, and the Harvard second line of defense was unexpectedly weak. Hence, Yale gained 382 yards by rushing, while Harvard gained 74 yards. The kicking in the Yale-Harvard game was rather below that in the Yale-Princeton game, neither side quite averaging 40 yards. Harvard's attack proved superior to that of Princeton at one period, but her defense was never so fierce nor so determined; and Princeton improved under fire in the second half, whereas Harvard went to pieces. The Yale and Harvard lines were about equal in weight, but Princeton's averaged nine pounds lighter.

Both the Princeton and Harvard elevens were practically made over this year. Princeton's team was the best—win or lose—which has represented her in five years, although beaten in its crucial game. Its goal line was never crossed, except on Chadwick's two long runs, and in its kicking department it was stronger than in many years. Its weak point was in its attack, much of the strength of which was permanently lost when Burke and Kafer went out with broken collar-bones. Harvard put in five new line men this year; but although heavy, they lacked the skill and determined spirit of the 1901 line. The promising Harvard back field has been rather handicapped by the line, and had it not been for the individual brilliancy of Graydon, the attack would have been much less efficient. A team is no stronger than its rush line! Backs of average calibre may be developed sufficiently to win if you have a strong, sandy line of forwards; but the most brilliant backs will profit you nothing if your line yields.

Each season West Point climbs a notch higher. This conclusion is not based on scores nor on star players, but upon the evidences of more general knowledge of two things: rock-bottom principles and the latest evolutions in offensive play. She easily secures fourth place.

Cornell has made an excellent showing except during one slump in October, when, with a team of substitutes and cripples, the Carlisle Indians beat her 10-6, and again in her final game. There are splendid players on Cornell's team, and the system of attack is very powerful. Like most of the others, they rely on close formation plays, running the guards, however, instead of the tackles. The Princeton game was lost by 0-10, De Witt kicking two field goals; but aside from that, Princeton rushed the ball 196 yards to 84 and outpunted Cornell by nearly 15 yards in the average. Against Pennsylvania, she started fiercely, running up eleven points in the first half; but through sheer lack of condition she could not hold her advantage and was beaten 11-12, after a splendid fight by both teams. If ever a team was the victim of an unwise schedule it is Cornell. After she has fallen down a few more times on Thanksgiving Day she will learn that a team reaches top form but once.

Amherst never before saw such a season. For two years past the defense has been fairly good, and this year Mr. Gould has taught them an aggressive, well-constructed offensive game, far more scientific than anything ever used before at Amherst. By defeating Columbia, and also Dartmouth, Amherst makes her place secure. Dartmouth, big and strong, has been admirably handled by Mr. McCormack, and her offense has been exceedingly strong. It rushed the ball 225 yards against Harvard one week before the latter played Yale; it beat Williams and Wesleyan decisively, and finished by winning a desperate battle from the powerful Brown team by 12-6.

Brown's fine eleven was built upon lines new to Providence, the system being one evolved by Mr. Gunnison.

He employed to good advantage the modern close formation plays with either tackle back, and also worked up a strong line that could block hard enough to let loose his lightning half-back, Barry, for long runs in almost every game. With this happy variation of close and open plays, Brown held Yale down to 0-10 when the latter was slow; beat Pennsylvania by 15-6; held Harvard to one touchdown; made Columbia look like disconsolate foundlings, and nearly broke even with Dartmouth after a schedule which any of the big teams would have refused to play.

This year the plucky navy boys have been sacrificed on the altar of the god of hard-luck, ill-fortune having pursued them remorselessly ever since the season opened. After innumerable accidents of ordinary character, one of her best line men came down recently with typhoid, and another was nearly killed by an unlucky blow on the head. With a light team, so constantly shifted as almost to preclude anything like teaching concerted action, the academy had to face the greatest team West Point ever turned out and was beaten 8-22 after a gallant struggle.

Pennsylvania has returned to foundation-laying this fall, and Dr. Williams and his assistants have done well, considering the unusual paucity of real 'varsity material. The team was light and of uncertain temperament. Only three games were creditable, viz.: against Columbia, 17-0, and Harvard, 0-11, and Cornell, 12-11. In these were fire and dash, but in most of the other contests the spirit and quality were poor.

The disastrous season of Columbia is by no means a fair test of graduate coaching, nor yet a reflection on Mr. Morley. What, then, has been the trouble? For one thing, a chapter of accidents only surpassed by the navy team's record.

There is, however, another and more serious trouble. The Sanforian method of using the entire United States as a base of supply may have worked for a day, but has hardly furnished an enduring foundation. In every one of Columbia's four squads since 1899, the majority of men have hailed from other colleges. Perhaps that was necessary as a starter, but the responsibility for furnishing the backbone of every eleven should be placed upon the undergraduate students in arts and sciences.

Stick to the undergraduate departments; the graduate or transferred athlete is, all too often, a thorn in the flesh! He furnishes the background for more questions of eligibility, engenders more ill-feeling, and, with rare exceptions, imbibes less of the spirit of the second college for which he plays than all the undergraduates on the team taken together. Under Dr. Newton's tutelage, Lehigh has beaten its ancient rival, Lafayette, an accomplishment which alone makes her season a success. The team has used a modern attack for the first time in a number of years; several new foundations built on the guards-back principle have been well employed. Lafayette's season has been erratic. Only two men, Trout and Brown, have really been first-class, and had it not been for good coaching by Mr. Fultz, the results would have been even worse. It played about even with Brown, winning 6-5; lost an even game to Annapolis, 11-12, and was slaughtered by Cornell, 28-0, in a game in which many Lafayette substitutes took part.

Wesleyan and Williams were below the average this year. The former was almost entirely new and very light, averaging 158 pounds. Considering that eight men had never played football before coming to Wesleyan, the showing was good. Wesleyan held Brown to 0-5 in the early season, Dartmouth, 5-12, scored on Harvard, but lost to Williams, 5-28. Williams had much better possibilities, but was a keen disappointment until the last two weeks of the season, when the eleven began to show some signs of life. The line was only fair, the men were badly trained, and the team, as a whole, rarely got together. The ranking of the leading Eastern college football elevens for 1902 is, in the writer's judgment:

- |               |                  |
|---------------|------------------|
| 1—Yale,       | 7—Dartmouth,     |
| 2—Princeton,  | 8—Brown,         |
| 3—Harvard,    | 9—Annapolis,     |
| 4—West Point, | 10—Pennsylvania, |
| 5—Cornell,    | 11—Columbia,     |
| 6—Amherst,    | 12—Lehigh.       |

## THE ALL-EASTERN COLLEGE ELEVEN OF 1902.

FIRST ELEVEN.—Ends, Davis, Princeton, and Bowditch, Harvard. Tackles, Hogan, Yale, and Kinney, Yale. Guards, Glass, Yale, and De Witt, Princeton. Centre, Holt, Yale. Quarter-back, Brewster, Cornell. Half-backs, Chadwick, Yale, and Bunker, West Point. Full-back, Graydon, Harvard.

SECOND ELEVEN.—Ends, Shevlin, Yale, and Russ, Brown. Tackles, Sheehan, Brown, and Place, Dartmouth. Guards, Goss, Yale, and Warner, Cornell. Centre, Boyers, West Point. Quarter-back, Rockwell, Yale. Half-backs, Foulke, Princeton, and Barry, Brown. Full-back, Torrey, West Point.

Here we have a magnificent team with all the elements of a champion. Well-balanced weight, great strength without sacrifice of agility; the very men who were Yale's chief agencies in carrying out her newest tackle-back plays; the phenomenal kicking abilities of De Witt supplemented by Brewster; the irresistible line-plunging of Graydon and Bunker, the former one of the best blockers since Kelly; and the indomitable leadership of Chadwick, who is good for any kind of work a half-back should do.

ENDS.—Last year Davis was in a class by himself; this year every opposing team has adopted special means to neutralize his play, but he is still in the front rank—this time with Bowditch, of Harvard, fully his equal. They are fast, elusive, strong, determined, sure. It must be admitted, however, that their advantage over Shevlin, of Yale, Russ, of Brown, Bullock and Farmer,

of Dartmouth, and Rafferty, of Yale, is chiefly in the important item of experience. This gives them first honors. Shevlin and Russ are both 180-pounders and the best freshman ends seen in years. Mills, of Harvard, is also one of the new heavy-weight ends who are entitled to high rank. Henry, of Princeton, did good work until injured during the latter part of the year. Other excellent ends were McAndrew and Farnsworth, West Point; Whiting and Soule, Annapolis; Brown, Lafayette; Metzger, Pennsylvania; Voss, Williams; and Priddy, Amherst.

TACKLES.—Hogan is probably the leading tackle of the year, an earnest, indefatigable, powerful man, built down to the ground, a 200-pounder; and his freshman running mate, Kinney, is nearly as good, running very low and hard for so tall a man. Place, of Dartmouth, is the best defensive tackle in the East and would have made any team in the country, and so, with the exception of Yale, might Sheehan, of Brown; while Lueder, of Cornell, is one of the hardest propositions to face on any team. The men named, with Webb, of Brown; Knowlton, of Harvard; Short, of Princeton; Pierce, of Amherst; Torrey, of Pennsylvania, all played the new style of tackle with ability, Webb and Pierce being second only to the Yale pair in carrying the ball. Dee, of West Point, was a very superior tackle until he broke his wrist. Forbes, of Wesleyan, is another promising new tackle.

GUARDS.—Glass is something unique in his specialty. Only three or four such have been seen in football. Mature, heavy, agile, heady, he is the worst proposition in the field to handle. De Witt and Goss come next, and, of course, no one with the versatility of De Witt can be left off the team. Any good guard who can also send high spins seventy yards, can kick drops or place-goals from mid-field, who is a ball for strength and can sprint and dodge like a half-back, can certainly read his title clear for this eleven. Goss, like De Witt, has found his true sphere at guard and is one of the best. Warner, of Cornell, is at his best when running with the ball, and this year has done a little better than his partner, Hunt, who, however, is a man of greater possibilities. Harvard's pair, Barnard and A. Marshall, were a disappointment in the Yale game. They did not hold out well toward the end of the game, although men of strength and ability. Perhaps Palmer and Varnum, the Amherst pair, were the best in New England, outside of Yale. Other men who have shown strength as guards are Trout, of Lafayette, Bradley, of Princeton, despite a very bad knee, Riley, West Point, Belknap, the navy captain, and, toward the last, Mitchell, of Pennsylvania.

CENTRE.—We have no phenomenal centres this year, but Holt is a mighty good one. He is steady as a cathedral, blocks long and hard, passes evenly, and clearly earns his place. Boyers, of the army, is an easy second, being more aggressive than Holt, quick to break through, and a clean passer. Colter, of Brown, and Smith, of Dartmouth, are men of more than average ability, and McCabe, of Pennsylvania, Howard, of Amherst, and Barney, of Princeton, earned praise for steady, sandy work. Suggden, too, of Harvard, called upon unexpectedly, did some creditable playing in both big games.

QUARTER-BACKS.—There were several of marked ability, not including Daly, who has maintained his previous high record. But, in justice to other players, he ought not to be placed on the All-Eastern team any longer. Brewster, of Cornell, stocky, very strong, quick, a good handler, a clever general, driving his team well, and an excellent punter, has had three years' varsity experience and is well qualified for first place. Rockwell is a very close second though, having made great strides this year. Another brilliant quarter, not much, if any, behind the others, is Witham, the Dartmouth crack. He has played there three years, weighs 168 pounds, is a fine general, long punter, and deadly on handling kicks. Carl Marshall, of Harvard, is a good man in all departments. His work, up to the Yale game, was gilt-edged, although in that supreme contest he did not always come up to expectations. Burke, of Princeton, was one of the best of the new men until injuries forced him off; and Shannon, of West Point, Smith, of the navy, and Lewis, of Amherst, were all reliable, heady men. Dale, of Pennsylvania, was brilliant at times, but often disappointing, while Calder, of Wesleyan, handled the ball well, and was a good runner.

HALF-BACKS.—Captain Chadwick stands first. He was sure-footed, not to be denied his distance, a fine interferer, and an inspiring leader. Bunker, of West Point, is much better than last year. He is fast, heavy, hits the line hard, keeps his feet well, and helps his mates powerfully. Barry, of Brown, is a real sprinter, a McClung-like dodger, picks his openings finely, and backs up the line well. He is really entitled to the place, because of what he has accomplished against other teams. He is a player rather like Weeks, of Columbia, but worth more to his team because of his better interference. Foulke, of Princeton, is one of the best backs; his work will stand the closest analysis, always in the play doing his full share, sure, fast, and hard to stop. This may also be said in the main of Biran, of Amherst, Mears, of Williams—a terrific line-breaker—Dillon and Vaughn, of Dartmouth, Metcalf, of Yale, Hart and S. McCave, of Princeton, Gardiner, of Pennsylvania, and Hurley, of Harvard. Kernan by no means equaled his last year's record. He fumbled badly at times, and was very weak on the defense in the Yale game. Cornell had very good

DUELL (COLUMBIA) ABOUT TO KICK BALL ON COLUMBIA'S THIRD DOWN IN COLUMBIA-SYRACUSE TIE GAME.—Earle.

TWO IMPORTANT CLOSING EVENTS OF THE FOOTBALL SEASON.

## Birth of a Curious and Successful Money-making Idea

By George Helmer

IDEAS ARE always a bit above par in the market, because of their deplorable scarcity. They are indigenous to no particular soil, but spring up in most unexpected places. They have somewhat the same characteristics as the mushroom; unless they are plucked at once they are liable to wither on the stalk. Toadstools are sometimes mistaken for mushrooms by the injudicious, but toadstools don't find a very ready market. Some people have but one idea, and that is that they are full of all sorts of ideas. Ideas are like hives. When a man has one, it breaks out somewhere and itches, and unless his hands are tied he scratches. I've had hives myself. Ideas cannot be compared to babies, because some of them are born with whiskers and their eye-teeth cut—ideas, I mean. Then again some of them peep into the world mere infants, and grow and grow until they are bigger than their papa; then they get adopted by a syndicate. Sometimes, too, they are such attractive babies that they get stolen before papa gets their birth certificate signed, and then he can never identify his own.

Once upon a time there was a New York man with an idea. It was an idea which looked philanthropic, but was purely selfish. This idea is not the first thing in the world which has looked philanthropic and been purely selfish—but no matter! Its legitimacy has never been disputed and it is the sole property of Mr. C. O. Burns, of No. 13-21 Park Row, New York City. The beginning of this idea was the thought in the mind of Mr. Burns that there are lots of people who would save money if they just had a little incentive, and, knowing human nature well, he knew there is no greater incentive than pride in a little "nest egg."

You know when you make a nest, you must put in a "nest egg" or Mrs. Hen will lay no others, and that is why the nucleus of a bank account is called a "nest egg." When it is once deposited, it is an irresistible attraction, and its owner will strive to the utmost to add to it; and the bigger it gets the more fascinating it becomes, until one day Mr. Depositor knows the glory of crowing exultantly over a full nest. Now Mr. Burns knew all this, and out of this knowledge grew his idea.

This idea took the form of an ingenious little savings bank. Now you smile and think of the little red church with the steeple, which papa gave you on your sixth birthday, with a quarter in it which you straightway proceeded to shake out and spend; but this is a dignified invention, if you please, this C. O. Burns Auxiliary

Savings Bank, which has made for itself an almost unbelievable record. It is a peculiar little machine. You can put money into it, but you cannot get it out, for inside the slot, where the money goes, are two rows of teeth, little iron teeth that swing on hinges and shut down tight over the slot when the bank is turned upside down.

Now I'll tell you, you can't own one of these little banks at all. You may possess one and call it yours, but it really belongs to your big savings bank, national bank or trust company, and is a bank within a bank, so to speak, or a "chip off the old bank," maybe. If you have an idea you want to save money, you should pluck that idea right away, for of all mushroomy ideas it is the most mushroomy. Get after it on the instant. If you haven't a hundred dollars with which to start an account in the old way, go to a bank—there should be one in your town that carries these little banks—and ask for one, a C. O. Burns Auxiliary Savings Bank. You get one already locked and the bank keeps the key; then you take it home and begin to put your money in it. As soon as it is full, you take it back to the bank to be opened. The money is counted and you wonder as much as anybody how much there is, and I venture that five minutes of uncertainty and satisfaction is worth all the little sacrifices you made to save the fifty, seventy-five, or one hundred dollars that rolls around the counter in dimes, quarters, half-dollars and dollars with a fascinating, exultant jingle. Then the bank deposits the amount to your credit and

it begins at once to draw interest. The second time it is much easier to fill the little bank, because then you are adding to a "nest egg."

Individuals alone are not benefited by this little scheme. Everything is a "wheel within a wheel" more or less, and the big bank gets as much benefit proportionately as the small depositor who begins in this way to hoard small moneys. Just to cite one instance out of hundreds, the United States Safe Deposit and Savings Bank of New Orleans has more than doubled its deposits in the course of eleven months through the introduction of these little auxiliary savings banks. This bank was organized nine years ago on a small capital, and in September, 1901, its deposits had grown up to \$352,003.13. The following October they put in these little savings banks and by December 31st their deposits had grown from \$352,003.13 to \$425,022.03, and every bit of the increase was due to these little money boxes. By March 31st, 1902, the deposits had grown to \$586,870.42, and the following November they footed up to \$743,899.60. Think of that! And all in the space of eleven months.

Mr. Augustin B. Wheeler, the president of the United States Safe Deposit and Savings Bank, is most enthusiastic in recommending these little banks to any bank wishing to increase its deposits. He says that out of 7,943 depositors in his bank, 7,100 have come through the C. O. Burns Auxiliary Savings Bank. A most important item in all this is the fact that the bank adopting this little system takes upon itself no responsibility and assumes no part of the risk. The C. O. Burns Co. will send into your town a corps of men to secure your depositors for you, and all that is required of you is the exercise of a co-operative spirit, while payment for the banks is not required until the depositor has been secured by the C. O. Burns Co. and accepted by the bank.

Mr. C. O. Burns's clever idea has grown to such gigantic size already that it looks much as if he would have to adopt the syndicate method of caring for it. I had a most interesting talk with Mr. Burns in his office, No. 13-21 Park Row, the other morning, and he modestly disclaimed any intention of doing a missionary work and declared that like the rest of us he is after that glittering thing which stands for success and would spare no efforts to attain it. Now I like perfect candor like that. We would all be philanthropic if we needed not the money.

# Strolling about the Quaint Old City of New Orleans

By Eleanor Franklin

NEW ORLEANS, Nov. 23d, 1902.

**C**OME, GENTLE reader, just take me by the hand and go with me around this bend in the street here, and I'll show you the birthplace of an era. An era, the greatest that has ever written itself across time's register. The era that has made the history of the United States the greatest history ever written. You don't know your New Orleans? No? But you know your history. You know just one hundred years will have rolled off the calendar on the 20th of December, 1903, since his Excellency Monsieur Laussat, French Governor of Louisiana, drew his troops up in line on the Place d'Armes and with much ceremony and discharge of artillery delivered the keys of New Orleans to Messrs. Claiborne and Wilkinson, commissioners of the United States government. Some foreign wit, writing his impressions of a six weeks' tour of America for the delectation of other wits of his class, has called us a "bargain-counter people." Perhaps we are, but if we are, the Louisiana purchase is the greatest bargain we have ever made.

It must have been right here on the Place d'Armes that Jean Baptiste Lemoyne de Bienville stopped first on his march westward in search of a site for the capital of Louisiana. That was in 1718, nearly two hundred years ago, and eighty-five years before the Louisiana territory, which reaches from the palm-lined banks of the Gulf of Mexico to the snow-capped peaks of the majestic Cascades and Sierra Nevadas, became a part of the United States. Two hundred years! Ah, the life histories that seem to breathe themselves through this soft air. The sighs and cries, the laughter and music, the boom of cannon and the measured tramp of armies! L'Aiglon standing on the battle-field of Wagram could not have seen more glorious visions than pass before our mind's eye as we stand here and contemplate the sweep of history across this great territory of the Mississippi valley.

"My country 'tis of thee  
Sweet land of liberty  
Of thee I sing"

must be a sentiment almost lost upon the man who has never crossed this great "father of waters" and looked westward toward the sunset, where "my country" loses itself first among the clouds and then in the blue-green depths of that great ocean whose name means Peace.

Over across the square there—it is Jackson Square, now, this time-honored Place d'Armes, with an heroic statue of Andrew Jackson, that glorious old hero of the battle of New Orleans, resting on ground that generations of heroes trod before he was born—over across the square there, to the right of St. Louis Cathedral, is the Cabildo where the Louisiana transfer was made, in the room on the second floor to the left. The Cabildo was built by the Spanish in 1788 for a court, and has never been used for any other purpose. It smells for all the world like a great musty tome of ancient blue law, and looks like the severe big wig of some austere over-dignified magistrate. One might imagine scenes from the Inquisition being enacted in its dark old cells, but we are not imagining now. The history of New Orleans is sombre enough in reality—as sombre as the cypress swamps in their draperies of gray moss that surround her on every side like weeping, mourning sentinels.

But turn away from this Place d'Armes with its thousand spooks and spirits, and look toward the river yonder. Do you remember Mark Twain on the Mississippi? I

JACKSON SQUARE, BIRTHPLACE OF NEW ORLEANS AND SCENE OF LOUISIANA'S TRANSFER.—Trenison.

believe there is his very old steamboat that he thought was so grand with her twin smoke-stacks all decorated at the tops and her little pilot-house with the fluting around the eaves. And mayn't that be the infallible Bixby himself lounging down toward the wharf there, "wearing a toothpick," with his trousers in his top-boots and his slouch-hat thrown back at a rakish angle? Of a surety there are the same houses on the river front. There can be no doubt of that, since they have been there, many of them, for more than a century. There's the old French Market, for instance. Why, that was there before steamboats were invented, was it not? The queer seraggily, noisy, conglomerate place was old to the grand-mammies of the picturesque negro aunties in their bright bandana kerchiefs, who sit around in odd places with their praline-candy baskets, looking for all the world as if they had been placed there by some fanciful decorator, just to "dress the scene." This "praline candy" is to New Orleans what the "bum-bum" candy is in the streets of Cairo, and is a feature not to be overlooked by the visitor to this quaint old city. The old negro mammies who sell it make it also, and it is enough to make one's sweet tooth ache to see Aunt Sukey in her big white apron, with her inky wool tied up in a peaky-looking red kerchief, standing over a rickety old stove, stirring the sugar taffy with a big wooden spoon, which she holds aloft occasionally for the purpose of testing the condition of the boiling, bubbling, chattering syrup which seems to be trying to climb by itself over the sides of the big brass kettle.

"Heah! you'se 'lasses yit," says Aunt Sukey. "Yo' needn't be sputterin' to git outen dat kittle. I'se goin' make sugah candy outen yo'. Now heah, honey, yo' all stir dis slow like dat, while I gits de outs. Watch out, chile! Not so fas'! Fus' t'ing yo' all knows, yo'll have sugah what'll crumble all up fo' yo' can 'git yo' fingers on it." And Aunt Sukey waddles off to get the big pecan kernels with which to sprinkle the patty cakes of thick syrup, which she pours out on a cooling board and places under a mosquito netting out in the shade of the big oak tree that hangs down over the corner of her rickety little cabin.

Aunt Sukey and her basket of praline candy are only an ornamental feature of the French Market. This gigantic old curiosity shop is a place where one may study the world, for here are congregated the most picturesque types of French, Spanish, Italian, Mexican, and Creole vendors, each in his particular booth, presenting his wares in his own individual manner and language.

But we were over on the levee yonder. I suppose it was Aunt Sukey's bright *figon* which attracted us to the market-place with its blue-black mud and million odors. As for odors the levee also has a splendid collection peculiarly its own. What with those ten thousand barrels of sugar and syrup rolling together in their own sticky slush, and the lugger landing not a stone's throw away covered with a thick bed of old oyster-shells which evidently affords a change of diet to a swarm of drowsing insects that we might think would be irresistibly attracted to the cloying molasses farther up the levee.

How many steamboats do you suppose it will take to carry all those bales of cotton up to St. Louis? It is marvelous how much cotton can be loaded into the hold of a Mississippi River steamboat, and yet the acres of bales which line the levee seem never to diminish in number. To describe the scene presented by a crowd of magnificent black men, each built on the lines of an Ajax, loading great bales of cotton into the dark hold of a steamboat and keeping time to their rhythmic movements with a weird swinging melody that might have come down through generations from an ancient tribe in the heart of Africa, is a task for a master pen and may only be glanced at here. The subject of the growth of Louisiana's output of cotton during the last century is an attractive one in itself and tempts one to plunge into statements and statistics which sound exaggerated enough to be intensely interesting, but there is an organization of men in New Orleans called the Progressive Union which will deliver upon request any possible kind of information to anybody interested in New Orleans and her undoubted great future. This is a remarkable body of men, the Progressive Union of New Orleans, and it was a splendid

idea which caused them to unite their efforts in this organization to forward the interests of their attractive and rapidly developing city.

The Progressive Union of New Orleans was organized by Mr. Andrew R. Blakely, the proprietor of the new St. Charles Hotel, for the sole purpose of placing before the world in the right way the attractions and business conditions of this city of the Gulf with its countless possibilities for future greatness. It is a unique organization and is accomplishing wonders for New Orleans and its vicinity. It is composed of 1,500 of the principal business men of the city, who can derive no possible direct and immediate personal benefit from their loyal support of the Union. Their watchword seems to be "What benefits New Orleans will benefit

me," and they work willingly and unselfishly to that end. But this is an unintentional digression from our subject.

Do you know there is a bar sinister across the shields of most of the first families of New Orleans? We should go back across Jackson Square and look at the residence of his grace Archbishop Chapelle and talk it over. It is the oldest house in New Orleans, this musty old pile standing in afternoon shadow of St. Louis Cathedral, which stands upon the site of the first church in the city. This house was built in 1726 by Bienville to shelter a company of Ursuline nuns, who came over from France to found a school for girls and to minister to the sick and the orphaned. But first comes the story of the bar sinister. When New Orleans was founded, only men were brave enough to work their way through the endless desert wilderness, peopled with hostile savages, that stretched away to the north and eastward. They were brave fellows indeed, these pioneers, and came for the most part from Canada and the north country, lured southward by the tales of wealth and plenty which seem always to find their way from unexplored regions into civilization. And so the fearless fellows came from all directions and enlisted under the banner of Bienville at New Orleans, but they brought no women with them, and New Orleans, instead of a young town, was only a soldiers' camp.

Finally, tiring of this homelessness, they sent a request to Louis XV. of France for a shipload of women settlers; and Louis, by way of experiment, complied with this request by sending over a large party of women from the prisons and houses of correction of Paris, and these women, welcomed with open arms by the lonely settlers, made the beginning of domestic life in New Orleans. But this state of society did not satisfy the priests and righteous men of the colony; and a few years later, after the Ursuline nuns had added the sweet influence of their sanctified lives to the community, Louis was prevailed upon to try a different kind of experiment, and this time he sent over a shipload of women of spotless character, selected with a view to their ability to meet bravely the hardships of life in a new country. Louis supplied each with a small dowry and trousseau, which she brought over in a trunk or casket, and from this these girls got the name "*filles a la cassette*" and were called that always, in contradistinction to the "correction girls" who preceded them. These "casket girls" found shelter in this very same house, standing here yet, now the residence of his grace Archbishop Chapelle and were wooed and won by the manly young pioneers, while under the protection of the Ursuline nuns. It is a proud family,

indeed, that can trace its origin in this country back to the beautiful "filles à la cassette."

MAMMY LOW REMINISCING ON THE DAYS "BEFO' DE WAR."

And now I want to go around the corner there, and lose myself in the labyrinth of narrow streets and queer little flag-paved alleys of the French quarter. But I don't care to go alone, and to lead one blind into corners and curious places, and furnish eyes for seeing; I want to shrug my shoulders as one of my little Creole friends would do, and express in the same eloquent pantomime my utter inability to do this, but being a Yankee I must be point blank, and say impossible! When two meet who have traveled in the same foreign land, how quickly there springs up between them an interest and understanding into which no uninitiated one can enter. We were going down into the old French quarter, where the quaint old Creole houses stand, as they stood a hundred years ago, their iron-railed balconies stretching out across the narrow streets as if they were peering with impertinent curiosity into the second-story

window over the way, to see what their neighbors were about. Queer, wrinkled musty old houses they are with high arched stone doorways, opening into stone-paved court-yards, where one is liable to see drowsing in a hammock, swung from a vine-covered wall, a dusky Creole maiden just blossoming into wonderful womanhood, crooning a melody that, though it may be modern, coming from her full red lips breathes a subtle charm. An old negro may sing "Way down upon the Suwanee River" sitting out in the moonlight on an

old steamboat floating down the Mississippi, and it is a more beautiful song than "Suwanee River" crooned from the perfect throat of some nightingale in a brilliantly lighted opera house. It is all a matter of "atmosphere" I suppose, but when Creole Sue herself sings "Creole Sue" one listens differently somehow.

There is no other place in America like the French quarter in New Orleans, just as there is no other place in America like Chinatown in 'Frisco. It is too intricate and extensive and its points of interest

*Photographed for Leslie's Weekly by John N. Trunkner, on the opening night of the season.*

too numerous to write about in one little story. There's the ancient Absinthe house with its thousand romances; there is Madame Delphine's and Père Antoine's corner, the old St. Louis cemetery with its romantic names on time-stained tombs; and then there is just the town itself, the queer, scraggly, unkempt ancient town in the heart of a modern American city. But there is one thing in the French quarter which we must not pass unmentioned, and that is French cookery. There are a number of French cooks down there in Cres-

cent Town, who have attained international reputation. What traveler has not breakfasted at Begue's, down by the French market, and written sonnets to Madame Begue's delicious broiled liver. I myself had the novel pleasure of breakfasting the other day with Monsieur Jules Alcistoire, the cook of cooks, to whom cookery is an art, an art to be loved, to be studied, practiced, and improved.

Monsieur Alcistoire is "Antoine." Everybody knows "Antoine's." The original Antoine was Jules's father, who came to this

country fifty years ago and opened the little café right where it is to-day. A history of New Orleans could hardly be written without mentioning Antoine's, since it was the theatre of many an interesting event during the stormy times in the early sixties, and is especially marked in late history as having been honored by President McKinley in his last memorable trip across the continent. Just a stone's throw from Antoine's, down on the next corner, stands the old St. Louis Hotel, whose history would make a book of stirring interest, but it is an eloquent fact that the natives of New Orleans, and of that vicinity especially, seem to have forgotten that the musty old pile, shut up tight and crumbling to its fall, has a history old as the city itself, and only remember that our dear dead President once stood on an upper balcony and spoke brave words to a multitude in the narrow street below. "That is the old St. Louis Hotel," he will say; "President McKinley made a speech from the corner of the second balcony there when he was in New

Orleans," and they don't seem to care to say more, nor does one care to hear anything else just then.

But about the breakfast with Monsieur Alcintore. His aged mother, a beautiful old lady, who talks with pardonable pride about her eighteen children, was also his guest this morning. And what a breakfast it was! Monsieur Jules prepared it himself, which is enough to say of it, and talked all the while in his fascinating imperfect English about his Paris and the wide world as he knows it, and particularly about an interesting time when he cooked for his Highness, "his very High Highness," said Monsieur Jules with a laugh, Prince Bismarck.

"Monsieur doesn't have to cook," his dear old mother will hasten to explain. "He has money—plenty—and a charming family." But then he loves to make those wonderful dishes, and he has so many friends who love his beautiful breakfasts. "And then a man must work," says he. Monsieur Jules Alcintore has much to answer for. He is responsible for the hypercritical taste of most of the epicures in New Orleans—and in respect of epicures New Orleans is the Paris of the Western Hemisphere. He stands in his quaint old iron balcony, regretfully stroking his small goatee, as we take our departure, and we cast a regretful look backward as we wander on into the corners of this old town looking for interesting individuals and strange romance-haunted houses.

It is an endless journey of exhaustless interest if we keep going around and around, but straight out before us there is Canal Street, that broad modern thoroughfare with its ten thousand street-cars and rows of pretty stores, and a little beyond is the great new St. Charles Hotel with all its twentieth-century comforts and "modern inconveniences." Is it possible it is within five blocks of that little France where we ate the wonderful omelette soufflée with Monsieur Jules?

### The Famous French Opera in New Orleans.

NEW ORLEANS as an American city is unique in a great many ways, but no feature of life in the quaint, fascinating, cosmopolitan town so distinctly illustrates this fact as does the French opera. There is only one other place in America where one may hear opera as opera should be rendered, and that is in the Metropolitan Opera House in New York City, but in this magnificent temple of music one misses that subtle atmosphere, that unnamable charm, which tradition has thrown about the French Opera House in New Orleans, and one misses also the evidence of that intimate social intercourse which seems possible only in the smaller cities, where families grow up together through generations.

The first night of the opera season is the opening of the social season in New Orleans, and the opera itself is the most important feature of New Orleans social life. For nearly a century it has held the undisputed first place in the hearts of the people of the delightful old French-American city, and it grows each year in popularity and in pride of place. It must be understood, however, that New Orleans loves her French opera not because of the social side of the operatic season, but because she has been taught for generations to love it for the music and for art's sake. The dominating influence of society, as exemplified by box-owners in the Metropolitan Opera House, who have at different times created much excitement and antagonism in the parquet by talking through the performance, would never be tolerated in New Orleans. The music and musicians are the first consideration in this splendid old house; consequently New Orleans knows her great composers, her Mozart, Meyerbeer, Rossini, Verdi, in detail, and knowing them so is able to listen to and enjoy them understandingly. Another thing which adds to New Orleans's enjoyment of French opera, and has doubtless had much to do with the great popularity of the institution, is the fact that one-fourth of the population of the city speaks French in ordinary daily intercourse, while another two-fourths is able to understand the language perfectly.

Now one might write volumes on the French opera in New Orleans and not exhaust a fascinating subject. One might tell how it began in 1813 and follow its history through triumph and vicissitude up to the present day, where we find it holding a glorious place, all its own, in the American world of art. One might write life histories which have been made in and about the old institution, life histories whose final chapters might be laid under the ancient dueling oaks in City Park, not so very far away; for it is said more cards have been exchanged and more

"affairs of honor" arranged in the foyer of the French Opera House in New Orleans than in any other one place in the world, and it has not been such a long time since the glint of pistols in the moonlight was the only thing which served to satisfy the "honor" of your warm-hearted Creole gentleman. One might write the story of triumphant débuts made in the old opera house that would grace the musical record of any capital of Europe. One might tell of quaint laws and customs which have kept this old opera house in the heart of the French quarter, down among the cafés, curio shops, and queer little Creole houses in the narrow streets, the most exclusively fashionable as well as the most generally well-beloved institution in the venerable aristocratic town, but all that would be too long for this little sketch, which is merely designed to record the opening of the season of 1902-3 on Tuesday night, the nineteenth of November, at which time the wonderful photographs published in this issue were taken.

The French opera has been existent in New Orleans for nearly a century, and this is the first time in its history that a photographer has been permitted to turn his camera upon the assemblage, which does not merely represent but which is the highest society of New Orleans. The photographs were taken for *LESLIE'S WEEKLY* through the courtesy of the French Opera House Company, which is composed of a number of New Orleans's most prominent business men, and Monsieur Charley, the manager of the opera company. Monsieur Charley had some difficulty in getting the consent of the singers themselves to having the photographs taken, since it necessitated their singing the big fourth act of "Les Huguenots" in the smoke which is an unavoidable result of a big flash-light, but the perfect good humor which prevailed both behind and before the curtain made it possible for Mr. Tennison, our photographer, to attain the unusual success which his photographs disclose.

It will be noticed that there is a great scarcity of women in the parquet. In fact, it looks much like a sea of upturned shirt-fronts. This is due to the fact that the parquet was originally and for years reserved exclusively for men, while the women occupying the boxes in their brilliant and beautiful evening toilettes won for that part of the house the name "corteille," or "flower-basket." The parquet is no longer reserved for men, however, it having been found necessary to throw it open to the traveling public, which is no small part of New Orleans's population during the winter months.

Nor is full dress any longer demanded for this part of the house, since travelers who wish to attend the opera are often entirely unprepared for a social function. Taken all in all, the French opera in New Orleans, on the opening night or on any particular occasion, presents as brilliant a spectacle of its kind as could be seen at any time in any city in America, and as an old institution it is something of which the people of New Orleans are justly proud.

### Two Remarkable Photographs.

THE ATTENTION of our readers is invited to two notable triumphs of photography presented in this issue. One of these comprises two views of the interior of the famous French Grand Opera House at New Orleans, secured by special permission by John N. Tennison, the well-known expert artist of the Crescent City. The pictures were taken from the stage with two cameras, 18x22 and 8x10, and a flash-light was used. They vividly represent the fine old auditorium crowded with a fashionable assemblage, and they are all the more interesting from the fact that they are the first photographs ever made of this historic building.

The second example of the photographer's skill is the wonderful panoramic picture by Falk of the recent great football game between the Yale and Harvard teams at New Haven. This photograph, which is far beyond the scope of the ordinary camera, was taken with a specially arranged panoramic camera invented by Charles Mills. It should greatly interest every lover of football contests.

Photography has done and is still doing very much for illustrated journalism, and the latter has reciprocated by generously fostering photography. The photograph is every day becoming more and more essential to the illustrated publication. Fine photographs eclipse the most careful drawings in accuracy and vividness, and even in beauty. Photography is progressive, improved methods and apparatus for its purposes being devised every year. It is destined to attain to a greater degree of perfection and usefulness, and, while it will never supplant the individual artist, it will occupy a larger place in illustrative art.

### Young Men and Railroad Service.

RECENT STATISTICS showing the enormous expansion of railroad business in this country during the past few years may also serve to call attention to the fact that no modern industry offers finer or more promising opportunities for capable, energetic, and ambitious young men than railroading. Railroad managers are insisting, too, more and more upon good character, sobriety, frugality, and honorableness of life among their employés, requirements that work a double benefit by raising the morale of the entire body of railroad men and also by adding to the security and confidence of the traveling public.

In a recent communication on this subject in the *Chicago Tribune* Mr. J. H. Barrett, general superintendent of the Chicago and Alton Railroad, makes the important point that after a young man enters the railway service there is no position, no matter how high, which he cannot hope to attain. The spirit pervading railroad circles is a purely democratic one; the principle that one man is as good as another rules here, perhaps, more widely than in any other business. Character, integrity, and proved merit are the only pass-words needed to enter all branches of the service, from the lowest to the highest. Nearly all the prominent railroad presidents of the day have worked up to their present positions from the humblest posts. The spirit of comradeship and mutual helpfulness among railroad men of all grades is very strong, and nowhere is real merit more quickly recognized and conspicuously rewarded.

In the article referred to Mr. Barrett also points out that the general rates of pay received in the railway service are such as to attract young men of ability and insure them fair and just and increasingly large returns for their work. To come to details on this point, it is said that if a young man desires to become a train-man he is required to serve an apprenticeship of short duration. Within a month he becomes a brakeman on a freight train (\$50 to \$75 a month); in about two years he will be a freight conductor (\$90 to \$100 per month); in about six years, according to conditions, a passenger conductor (\$90 to \$120 per month); all promotions, in matter of frequency, depending almost entirely upon individual merit and seniority.

### Special Prizes for Amateur Photographers.

*LESLIE'S WEEKLY* was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyright photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when better postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unsuitable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of *LESLIE'S WEEKLY*, whether subscribers or not. N. B.—Communications should be specifically addressed to "*Leslie's Weekly*, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "*Leslie's Magazine*," or other publications having no connection with *LESLIE'S WEEKLY*.

# All on Account of a Chrysanthemum

By Ruby Douglas

"HE LOVES me; he loves me not. He—"

"Don't, Blanche; don't destroy the flower. I'll tell you." George Hadwick covered the fluffy yellow chrysanthemum with his hand and looked into Blanche Ashbaugh's eyes. "May I?" he asked.

"How can you tell?" she smiled saucily at him. "Have you counted these petals?" Her face was dangerously close to his.

"No, but—"

"Then," she interrupted, "you know nothing about it." Blanche continued her counting. "He loves me; he loves me not."

The young man looked at her in silence for a moment. Again this elusive piece of girlhood had invited the very words he would say to her to his lips, and again she had cut them off as they were formed for utterance. Then she had lowered those long black curtains of her eyes to let him meditate on his narrow escape. Perhaps, too, she knew what a pretty contrast those same black curtains were to the pure pink and white of her skin.

"Blanche."

"Don't, George, when I'm counting. He loves me; he loves me not. He—why, George Hadwick, how dare you! I'll never speak to you again. Give me that flower this minute." A pretty crimson suffused her cheeks as she stood angrily before him. "You've torn it to pieces."

George looked at the crumpled flower in his hand. "You provoked me to do it, Blanche. I'm sorry, but—"

"You're not! You needn't be. You're the most ungentlemanly person I ever knew and I will not go to your old football game with you to-morrow. I won't go! So now!" She threw herself into a chair on the opposite side of the room.

Every attempt at reconciliation was in vain and George Hadwick left her unrelenting, unforgiving.

"Perhaps," he thought as he walked toward his rooms, "the Fates might have brought it my way, but I could not stand the suspense. And she persisted in pulling the entire flower to pieces and not listening nor talking to me. Yes, I was justified in taking it from her." With this self-administered consolation he entered the Kappa Sigma house.

But the next morning, Thanksgiving Day, he somehow felt less pleased with himself and could think of nothing whatever for which to be thankful.

Even the confidence he had felt previously in the victorious result for his team in the big football game of the afternoon seemed to have vanished. What did he care who won if a certain smiling face with long black curtains

over the eyes was not in the grand-stand to see the victory? His college spirit, too, had disappeared—he seemed to have been playing for a little girl—not for a college.

The gridiron was firm and a chilly November wind made the day ideal for the Thanksgiving battle for the pigskin. Both teams were as fit as twenty-two men can well be with the thought that they had necessarily eaten sparingly of a most inviting Thanksgiving dinner.

An enthusiastic gallery followed the pigskin up and down the gridiron, first to one end, then to the other. Neither side had scored and the first half was almost over. College yells, cheering and waving made the grand-stand shake when the visiting team put the ball over their goal just as time was called.

"What's the matter with Hadwick? He fumbled twice!" Tom Higgs asked the question of the little girl by his side. "He usually sees that Harvard scores before the second half. Must be sick."

"Perhaps he is," answered Blanche Ashbaugh, but she had not the courage of her convictions. Her usual enthusiasm in a football game had left her and she sat in the grand-stand pulling the petals one by one from a chrysanthemum.

"If he spoils plays that way in the second I won't give much for our chances," persisted Tom Higgs. He did not observe the manner in which the eyes under those lashes looked at him. Perhaps it was just as well.

"I'm tired sitting still," said Blanche when she had pulled all but one petal from the once pretty blossom. "And it's cold; let's walk about until the game begins again."

Unconsciously—well, perhaps unconsciously—Blanche led the way to the farther end of the grand-stand, the end under which she had seen the players disappear for their few minutes' rest.

They leaned over the railing. "There are the players. Look!" said Blanche, bending over and looking at the men.

"Yes, and there's Hadwick right under us, lying there as if he had pawned his last suit of clothes. He'd better wake up or he'll be the captain of a defeated team." Blanche gave the man at her side another glance which was anything but one of acquiescence.

"I'll drop this on his face. Shall I?" asked Blanche, holding up the stem with one lonely yellow petal.

"It may wake him up," ventured Tom. He did not see the eager expression on the face at his side. How much depended on George Hadwick's reading the message of the last petal aright!

The big football player opened his eyes as if from a dream. He looked at the petal. Yes; he must be still dreaming. A dazed expression came over his face, and he looked up to see in reality a smile which he had just seen fade in his dream.

The Harvard line-up for the second half was heavier by one petal of a chrysanthemum than it had been in the first.

And the player whose weight was increased, if ever so slightly, surprised his opponents by his clever work. They had sized him up as in bad form. How could they see that little yellow bit of flower tucked under the dirty football suit?

"Hadwick isn't so sleepy, after all," said Tom, when he had exhausted his lung power cheering for Harvard's second touchdown.

"No?" said Blanche absently. She was too happy to listen to the mere platitudes of the man by her side. She could only read the messages conveyed from the gridiron in the glances of two big brown eyes.

All the way home Blanche talked listlessly with Tom Higgs. She was wondering if George would come that night or if he would wait until to-morrow. She felt confident he would come.

"You played excellently in the second half, George," said Blanche, giving her hand to a big football player that evening.

"Yes?" he asked, looking earnestly into her eyes.

"Yes," she replied, demurely looking down at her hand in his. Nothing seemed to come to her lips. She could not speak with her usual flow of language.

With his disengaged hand the young man was fumbling in his pocket. Bringing out a withered yellow petal he looked at it.

"It was this," he said, holding it up.

Blanche's color deepened. "May I tell you now what message it contains, Blanche? May I tell you what it is?"

"Isn't it a petal?" asked Blanche, smiling into his eyes, her old coquetry returning. She tried to regain possession of her hand.

"And it means?" he asked.

She did not reply.

"It means 'I love you, dear,' doesn't it?"

Perhaps it did. At least the petal was held in a close embrace between two hands while two young people said numerous things about themselves.

And now a yellow chrysanthemum petal lies buried between the leaves of a book and is only allowed to see daylight on Thanksgiving Day.

## The Turkey or the Gridiron

By E. L. Sabin

"PAPA, WHAT did they do Thanksgivings before they had football?"

Behold that which is likely to be a favorite query of the juvenile of twenty-five years from now!

Already how, in the minds of two hundred thousand and more persons, is Thanksgiving spelled? F-o-o-t-b-a-l-l! To football both church and table play second fiddle. Football is that circumscribes the sermon and abridges the dessert.

Crowds along the Atlantic coast, crowds upon the Pacific coast, crowds in the middle West, and why collected? To "give thanks"? No; not unless their eleven wins. To dine at a happy family board? No; not unless they can conveniently do so between yells.

They have gathered for "the game."

What of this "game," for which, through ten weeks, some thirty young men have been battered and bullied, curbed and curried, restricted to lean beef, exercise and hopes; to see which, men who know not even the name of one of the combatants will journey from Honolulu to Harvard, from the Yukon to Yale; which will warrant a staid banker in throwing aloft his silk hat, and his clerk in smashing it; which will make man and woman, high and low, forego the most ordinary conventionalities of society, not to mention the historic day, and become lunatics?

To witness what other spectacle lasting an hour and a half will rich and poor pay from two to fifty dollars, and sit upon hard planks, amid snow, rain, and wind—and miss dinner to do it?

Where is the glamour? Baseball is showy, cricket is classic, golf is picturesque, tennis is dashing, ping-pong is artistic, but football—football is force. Art and skill assuredly are there, but the dominant element is force.

"Blood-lust" is the definition offered by a noted psychologist for the microbe of football fever; blood-lust, a legacy from those times when our ancestors indulged in man-hunts among the primeval forests and fens; a legacy handed down through the gladiatorial ring and the knightly tourney to us of the side-lines.

The dog whirled around, before settling himself, as did his progenitors of the jungle; the infant turns in his soles as do the apes; we adult humans attend football games in lieu of man-hunts.

Once, Thanksgiving was, as its name implies, a day of thanks, signalized by praises to the God of Plenty. Now, forsooth, 'tis the God of Battles whom we laud.

Later, Thanksgiving grew to be termed popularly turkey-day. Now, the title is becoming a misnomer. Willingly we abandon the turkey to the bed-ridden and the disgruntled cook, and with colors fluttering lie us away

to the field. By luck and good management it may be "the turkey and the gridiron"; but should it be "the turkey or the gridiron"—then on with the pigskin and off with the fowl!

As a rule, man is more solicitous about his stomach than his soul. Had enough is it for him to be lured from

### A Sigh for Mother's Pie.

YOU may talk about your mushroom sauce, your truffled grouse and squab,  
You may think there's nothing sweeter than the corn right off the cob,  
But keep your boasted dishes, your stew, your oyster fry,  
And let me have just one more piece of mother's apple pie.

I KNOW pie's not in favor, nor is it now the style  
With those we call the bluebloods and those who've just "struck it,"  
I know they keep it off the bills, but what's the reason why?  
Is anything they cook as good as mother's pumpkin pie?

I'VE put up at the swell hotels; I've tried the dining cars,  
And found they'd give me anything from shaves to whiskey bars,  
But I can make-off myself, I have no taste for rye,  
Why can't they think of me just once, and give me mother's pie?

I'VE asked the question "time-again" of cooks and land-lords, too,  
The lunch-man and the man who makes the savory "ragout";  
But they have lost the knack, I'm sure, or really they would try  
To please the public's taste and mine with mother's hot mince pie.

I KNOW that I shall never seek a place of honor high,  
Nor do I ever think of wealth as coming by and by;  
But there's a hope I wish fulfilled before I am to die,  
And 'tis to have another chance to eat my mother's pie.

JASPER.

church; but when he is lured from his dinner, the case is exposed in all its seriousness.

Will football continue in the ascendancy? Indications point that way. The game is no longer confined to the colleges. Athletic clubs, large and small, city wide or neighborhood narrow, have taken it up. High school and grammar school boast their teams. Urchins in mother-made suits throng parks and streets.

However, let us hope not. We may not refill the churches—we of this restless, high irreverent, open-air

age; but at least let us go back to the sacred home-gathering, to the turkey of our fathers, which speaks, not of conquest, but of bounty and leisurely cheer.

The Grand Army of the Republic, and its kindred associations, have fought valiantly to confine Memorial Day to its original high aim; will there be necessary some Order of the Pilgrims, to do the same for Thanksgiving Day?

### Great Financial Success of the Jews.

MR. ZANGWILL'S bold answer to the question, "Why do Jews succeed? They don't"—is not substantiated by statistics. The Jews in this country are about one-eighth of the population, yet they claim one hundred and fifteen out of the four thousand millionaires of the United States, about two and a half times as many as they are entitled to. Even leaving out the backwoods, and confining the inquiry to the town population, it is found that the number of Jew millionaires is still disproportionately large.

### A Soldier's Foe.

KNOCKED DOWN BY UNSUSPECTED ENEMY.

COFFEE so affects the brain and nerves that proper nutrition is interfered with and the final ending is frequently nervous prostration.

"During the Spanish-American war, I went with my troops to Chickamauga," says Lieutenant J. G. Talbott, Springfield, Ill. "If there is any one place on earth where one drinks more coffee than another it is in the army. It is a soldier's 'back bone,' and I can assure you that I drank my share. After several months of hard drilling my health gave out, the chief cause being coffee, bad food, over-exertion and heat."

"On the advice of the surgeon, I tendered my resignation, and with my heart full of regret and my nervous system shattered, I returned home. Almost the first thing the doctor whom I consulted advised me was to quit coffee. That was the first intimation I had that coffee had anything to do with my condition. The next thing was 'What shall I drink?'"

"My wife's mother used your Postum Food Coffee and knew how to make it right, so I tried it and grew very fond of it. My nervous trouble soon left; my old-time health came back, and that fall I gained so in flesh that the boys on returning after 'muster out' hardly knew me. Quitting coffee and using Postum did wonders for me."

THE YALE-HARVARD FOOTBALL GAME—PRINCETON'S MARVELOUS ATHLETE.  
A POOL-ROOM TRICK

ECHOES OF A FAMOUS GRIDIRON BATTLE.—One thing proved by the Yale-Harvard game is that there must be a stricter and more rigid ruling about alleged coaching, under the guise of first aid to the injured, from the side lines. At every intermission of ten seconds of that memorable game "Mike" Murphy, the Yale trainer, ran out with a bucket, a sponge, and a word of advice, and was able to resuscitate at least three of his players before called down by Dashiell, the umpire; and this did not stop until Dashiell had had a little conference with "Mike." Murphy not only helped the injured players with the water-soaked sponge, but he flicked the cold water into the faces of other players near at hand, which did much to refresh them in that terrible battle of brain and muscle. It would seem also to be proved by the game that one man back, at say the 40-yard line, at defensive work does not begin to be sufficient when the team's opponents are aggressive line-buckers. C. Marshall is conceded to be an effective and sure low tackler, but when he was the only person between his line and the Harvard goal he lamentably failed. This point has been demonstrated this season, but it has not as yet apparently appealed to the coaches. We look for an innovation next year in the shape of putting back at least two men from fifteen to thirty yards behind the defensive rush line. When two teams are evenly matched this plan will not be necessary, but it would seem to prove that an almost errorless tackler can at least half the time be dodged by an expert back with a good head start. But, whereas Harvard was apparently afraid of taking a chance of weakening her team by putting more than one man back of the line, she did materially weaken it by attempting to box each Yale end with two men, when it was Yale's ball to kick and it was essential that the Yale ends get down the field to tackle the man who was to catch the ball. It was plain that by this device she took four men from her defensive line, and the point was that these four men were unable in any single case to box these two Yale ends. It is poor football judgment to think that two men forbidden the use of their hands can prevent an end from dodging them and getting down the field. And meanwhile the would-be interference is useless in that particular play for any other purpose. This play left the Harvard centre numerically one-half as strong as the Yale advancing rush line, so that if the Yale ends had failed to break through, their interference there would still be a cavalcade plowing through the Harvard centre and bearing down on the man catching the ball. The Harvard delegation gave its team a splendid twenty-minute reception of cheering at the end of the game. It was a fine instance of Harvard spirit, but it was almost the only cheering of the game, for old-time alumni must face the fact that singing has displaced cheering. Cheering was never at any time exactly a pleasant feature to the visitors, but the majority of them enjoyed the music rather more than the playing. That this change is radical and permanent is proved by the fact that each university now invariably has a band. The results of the season show the cold, calculating system prevalent at Yale, for the players were at their very best when the final and most important game of the season arrived. West Point, Bucknell, and Princeton all scored against the champions earlier in the season; none of them would have been able to cross the

goal line at New Haven on November 22d. During the season Yale scored 286 points to 22 for her opponents; Harvard made 185 to 46 for the opposing eleven, and Princeton scored 164 points to 17 by her rivals. Most of the other college teams fell below expectations, with the exception of West Point, which turned out the best team the soldiers ever placed on the field. The Yale team this year was about the strongest New Haven ever saw.

PASSING OF THE KNICKERBOCKERS.—The passing of the Knickerbocker Athletic Club of New York will be regretted by many people. The history of the organization which brought out so many famous athletes is interesting. Always a rival of the New York Athletic Club, it tried unsuccessfully to compete in accommodations with its wealthier rival. Organized originally as the Manhattan

the world in turning out great all-around athletes, but in De Witt, Princeton has developed a man who has accomplished things no other athlete has ever done. Many colleges have turned out men who were almost equally good in football and baseball. Others have shown men who were good baseball or football players and fine sprinters, notably Weeks, of Columbia. King, of Princeton, was a good all-around man, and so was Sheldon, of Yale. De Witt is as clever with his feet as he is with his arms; a peculiar combination. The Princeton giant is looked upon as the logical champion weight-thrower with a little more experience. He hurls the weights with practically no loss of force. He is admitted by the football experts to be the best punter and drop-kicker of the year, if not in the history of modern college football. His friends have mentioned him as half of the Princeton football team, and he certainly was a goodly half of the Tigers' track and field team last summer. If he could skate, what a great hockey player he would make for the Princeton team!

## BETTER BICYCLES AT A HIGHER PRICE.

—This has been the best year for the bicycle industry in England since 1897. The industry was in better shape in this country this year than last, and indications point to a further increase in the sale of wheels next season. With the reorganization of the bicycle trust and the turning over of the affairs of the big company to Colonel Albert A. Pope will come a general hustling in the trade. The old war between the trust and the independent makers is virtually a thing of the past. Practically all the old stock has been disposed of, which will mean a clean new model for 1903. There will be a slight increase in the price of bicycles, but the advance will not be enough to frighten the man or woman who prefers to pay a fair price for a first-class article.

GEORGE E. STACKHOUSE.

## Can Write Them.

CALKINS, THE STORY TELLER.

MR. FRANKLIN W. CALKINS, of Wyoming, Wis., who writes many interesting stories for the *Youth's Companion*, says:

"Food can make or unmake a writer. For a number of years, living the sedentary life of the writer and student, I suffered all the ills of nervous dyspepsia. I could eat nothing in the morning save a dry crust of toasted bread and a cup of weak coffee. For my dinner at six o'clock, I had been in the habit of eating rare beefsteak, the only food from which I seemed to get proper nourishment, but no meal was taken without the after pangs of indigestion; I was beginning to get disgusted with life.

"About a year ago a friend suggested Grape-Nuts, telling me of the benefit he had received from the food, and I began with it as directed; I found immediate relief from my indigestion and in a short time my dyspepsia left

me entirely. I have now used Grape-Nuts for a year and have had no trouble with my stomach, having eaten many enjoyable dinners.

"I find, in fact, that all you say for Grape-Nuts is true, and it is certainly the food for brain workers, and the truth of your claims is proved in my own cure. I have no appetite for meats."

SPIRITED GAME BETWEEN COLUMBIA'S SOPHOMORE AND FRESHMAN FOOTBALL TEAMS. LAMONT (SOPHOMORE) GOING AROUND THE END.—Earle.

Athletic Club, it failed, Andy Freedman, later of baseball conspicuousness, being the receiver. But a new club arose out of the ashes and took possession of the splendid quarters in Madison Avenue, under the name of the Knickerbocker Athletic Club. But the Knickerbocker was merely a proprietary club, and the members themselves had practically nothing to say about its management. So when the principal stockholder of the club failed re-

COLUMBIA'S VARSITY FOOTBALL SQUAD, AN AGGREGATION OF FINE YOUNG ATHLETES.—Earle.

cently the organization went to pieces. Now the Greater New York Athletic Club will try in a purely athletic way to rival the winged foot organization. It can never hope to cope with it in a social way. James E. Sullivan, of the Amateur Athletic Union, has joined forces with the Greater New York Club, and this means that the club will take an active part in track and field athletics.

## Books for Christmas Gifts

By La Salle A. Maynard

J. M. BARRIE,  
Who wrote "The  
White Bird."

MARY E. WILKINS,  
"The Wind in the  
Reeds."

WILLIAM F. GORDON,  
"Three Black Diamond  
Men."

KATE DOUGLAS WIGGIN,  
"Penelope's Irish Ex-  
periences."

JACOB A. RIIS,  
"The Battle with the  
Slums."

HARRIETTE COX HUTTON,  
"Our Lady of the  
Reveries."

IF IT were lawful to speak of anything suggestive of gloom in connection with the joyous days of Christmas-tide, we might say that no coming event of that happy season casts a longer shadow "before" than the preparation and announcement of books "suitable for holiday gifts." It is well that this should be so, especially at this time, for with all the long and bewildering *men* of rich, toothsome, and delectable things offered for the Christmas

just this year by the publishers, one needs plenty of space for deliberation and careful choice. For gift-books, like slippers, smoking jackets, ribbons and rings, need to have the element of fitness in them to carry real and unadulterated joy to the bosoms of their recipients. Unhappy consequences might ensue, for example, if the mistake were made, wittingly or unwittingly, of dropping Mr. Douglass Zabriskie Doty's chronicle of adventures in Noah's Ark or Amos R. Wells's book of rollicking rhymes into the Christmas stocking of the meditative theological student and aspirant for pulpit honors, or if Professor George A. Coker's "Religion of a Mature Mind" were deposited in the hose of the five-year-old candidate for kindergarten glory, whereas if the gifts were reversed both might be made happy forever and a day. Grown-up persons and well-mannered young people manage, of course, to put on an outward semblance of joy and becoming gratitude, no matter what they receive, it never being good form at Christmas or any other time to look gift horses "in the mouth," but when a young football enthusiast has Professor Moulton's new book on Shakespeare's Moral System handed down to him from the Christmas-tree, and grandmother is endowed on the same occasion with Guy Carrol's latest version of Grimm's Fairy Tales, the effort to appear jubilant over these unmerited favors from loving friends is likely to cost the recipients a degree of pain from which they ought to be spared on such an occasion.

IT IS with a humble desire to assist our readers in avoiding such trying experiences as these in choosing Christmas books that we have compiled the list given on this page. Of course the list does not include a hundredth part of the new books issued during the past few months, for the season has been a remarkably prolific one, nor does it contain by any means the titles of all the desirable books; but an honest endeavor has been made here to give a choice selection of the latest and best books under the several heads indicated, and we are confident that our readers will hardly go amiss if they trust to our judgment in this particular.

WE HAVE given fiction by far the larger space, not only because such books are more numerous than any other class, but because they seem to be more in keeping with the light and joyous spirit of Christmas-tide and therefore more appropriate as gifts. A story of the type of "Oliver Horn," or "The Blue Flower," or "Aladdin O'Brien," or "A Sea Turn," or "Oldfield," or "Tangled Up in Beulah Land," or "The Sheep-

Stealers," would not be out of place in any Christmas stocking, and even grandmother and the doctor of divinity would be made truly happy to receive one of these. Few people pretend not to read novels nowadays, and the few who do thus hold aloof might be induced to enter into these joys if they received one of these books in the mellow Christmas days. We know a man who seldom indulges in fiction, but who makes a point of re-reading Dickens's Christmas stories in the late December days every year, because they help to work up his feelings to a proper pitch for the enjoyment of the season and thus prevent him from being haunted, like Old Scrooge, with the ghosts of Christmases past. Some of the books in our list, like Harte's "Condensed Novels," Jerome's "Paul Kelyer," Jacobs's "The Lady of the Barge," and the collection of Frank Stockton's stories, are well calculated to drive away the blues, lay ghosts, and otherwise prepare the mind for the proper contemplation of roast turkey and plum pudding, and other dainties.

IT WILL be observed that the books selected are for the most part by old and already well-known authors. It would be a great mistake, however, to confine a choice to these, for among the few new or less-known authors mentioned are a number of books of exceeding interest and value. Such are "The Sheep-Stealers," by Violet Jacobs, a new English author, a novel founded on the anti-tollgate riots of South Wales early in the last century—a work that recalls the best methods of Thomas Hardy; the "Aladdin O'Brien" of Gouverneur Morris; "The Last Word," by Alice MacGowan; "The Wooing of Judith," by Sarah Beaumont Kennedy, and "Out of Gloucester," a most charming collection of seafaring stories by James H. Connolly.

TAKE it all in all, we know of no publishing season for many years that has offered so many books of real interest and permanent value as the present one, and those in almost every department of literature. In fiction the showing is specially strong and brilliant, and the person who cannot find many books to his taste in the list which we submit must have a taste that needs looking after.

## A Great Insurance Company.

The Liverpool and London and Globe Insurance Company, one of the largest insurance institutions in the world, just fifty years ago, realizing the importance of New Orleans as the commercial metropolis of the South, and with the view to better promote its growing interests in the South, established in New Orleans a department for the conduct of its affairs, creating, at the same time, a local board of directors composed of prominent citizens of New Orleans. Its foresight in this move can best be proven by the enormous strides it has made in the South, and especially in Louisiana and States immediately tributary thereto. To further express its confidence in the city, it has recently invested nearly \$500,000 in a modern fire-proof office building, and subsequently acquired three adjoining properties, and which latter can be accepted as an evidence of the satisfaction of its initial investment. By a remarkable coincidence, the first days of the company's existence in New Orleans were spent on the identical spot of its present abode, when its quarters consisted of a small one-story structure, with not over three employees, while its present home represents one of the most beautiful buildings in the South, seven stories of strictly modern construction, and with a force of nearly thirty employees. Verily, the Liverpool and London and Globe Insurance Company is looked upon as one of the institutions of the Creole City.

# Jasper's Hints to Money-makers

NOTICE.—This department is intended for the information of the regular readers of *Leslie's Weekly*. No charge is made for answering questions. All communications should always include a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *Leslie's Weekly* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, entitling them to the early delivery of the papers, and in emergencies, to answers by mail or telegraph. Address "Jasper," *Leslie's Weekly*, 110 Fifth Avenue, New York.

THE terrific efforts made in certain quarters to prevent a collapse have caused a sudden and sharp decline in prices. It was the fashion, during the boom period, for the bulls to take up a group of stocks and manipulate them for an advance, and then to sell at the high prices and take up another group and repeat the operation. Lately the bears have turned the tables and have been following a similar plan by attacking Standard Oil, the Morgan, or the Gates stocks, and in every instance the victory has been on the bear side. That the market has not touched its lowest plane is evidenced by the fact that in making the transfers of large blocks of Chicago and Northwestern shares and of Southern Pacific shares, the great operators, who were compelled to let go at a sacrifice, sold at considerably lower than the market rates. In other words, they had to open up a bargain-counter in order to effect a sale.

Of course there are artificial factors in the decline as there were in the advance of the market. I have no doubt that some old established interests have resented the intrusion of Western men and methods on Wall Street, and have sought to punish the Western contingent for their audacity in obtaining possession of such railroads as the Louisville and Nashville and the Rock Island, and entering a field which had heretofore been almost entirely monopolized by Morgan & Co. and allied interests. The greatest danger to the market is in the possible collapse of some overloaded operator or syndicate, which might carry down with it many weaker concerns, create alarm, and culminate in panic. The report that over half a billion of the industrial corporation underwritings of the last three years is still open is significant. Must there be other syndicates organized to relieve underwriting syndicates that are on the ragged edge? And who will relieve the relievers, if the stress of bad weather in Wall Street continues? Where shall the life-saving station be found? If reports are true even Mr. Morgan found it easier to offer bonds than cash to the English owners of the White Star Line, which is to be

a part of his International Mercantile Marine Co. I fear that the public will not be very eager to subscribe to this latest Morgan enterprise. The pitcher that goes to the well too often is sure to be broken.

It is evident that shrewd bull operators have been selling out their stocks at every chance and that some of the most daring are ranging themselves on the bear side. The boldest optimists predict that our general prosperity will continue for a year longer; but suppose this prediction fails and the growing signs of a halt in the high tide of prosperity continue to increase. Suppose that the antagonism between labor and capital should be strengthened; that the coal-strike plan of arbitration should fail and the strike be renewed; that the railroads, with declining trade, begin to cut rates. What would be the outcome? It can be nothing else but what it has been in the past, an era of railroad and industrial bankruptcy and reorganization. It all depends upon how strained the situation may become, and very much depends, in this connection, on the reasonableness with which labor and capital will deal with each other. The presidential election, a time of general business unrest, is rapidly approaching, and the pendulum continues to swing away from the satisfactory poise of McKinley prosperity.

"D." Newcom, N. J.: Four dollars received. You are on my preferred list for one year.

"H." Portsmouth, O.: The proposition is purely speculative. I do not advise the purchase.

"B." Manchester, N. H.: Am making inquiries regarding the Ubeo Plantation Company, of Boston.

"D." Detroit, Mich.: Nothing is known of the propositions on Wall Street. What little I hear is not favorable.

"G." Harrisburg: One dollar received. You are on my preferred list for three months. I do not advise the purchase of the shares of the Doremus Automatic Vending Company.

"A. R." Dayton: One dollar received. You are on my preferred list for three months. I would not sacrifice at present, but would sell at the first favorable opportunity.

"W." Lansdowne, Penn.: I do not believe in the scheme of the Lincoln Financial Bureau, or in any other bureau, syndicate, combinations, or advisory agencies of that character.

"B." Toronto: You must be a subscriber to *Leslie's Weekly* at regular rates, at the home office, to be entitled to a place on my preferred list. Keep out of the market at present.

"K." Youngstown, O.: (1) A speculative proposition, of course. (2) Yes, the Hidden Fortune adjoins the Homestead. (3) The address of the Oro Grande Packer Mining Company is Standard Oil Building, 26 Broadway, New York.

"F. X. H." New York: Two dollars received. You are on my preferred list for six months. The position of the Denver and Rio Grande is excellent and the preferred is regarded with favor by many. I would not buy at present.

"A." Colorado: I regard the proposition of G. A. Aufrecht & Co. as about as cheeky a thing as I have seen. They offer to take your money and speculate with it for one-tenth of the profits, you to stand all the losses. Enough said.

"X." California: (1) I agree with you regarding the American Finance and Mortgage Company. (2) The Hidden Fortune is well located in the midst of a valuable territory. (3) Reliable brokers do not care to take small amounts for investment. It will be necessary for you to select your own stock and give an order for it.

"Curious." Chicago: It is impossible to figure on the probable price of copper, experts tell me, unless one can appreciate what the probable demand for the metal will be, and that depends upon the condition of business generally. At present, the supply of the metal appears to be increasing.

## Winter Golf under Palm Trees.

THE PENINSULA which the United States dips into the tropics furnishes interesting conditions. While rain, snow, sleet, and bitter cold prevail over the great broad zone of the country, down at the southeast corner of it, on the little nose of Florida, are palm trees, balmy breezes, and the warmth of bright sunshine. This situation has led to the extensive development of the only tropical State of the Union. And people fleeing before the Northern winter blasts like migratory birds, have carried into the region of palm trees their customs and amusements. So in the tropical land the Northern folks have laid out golf links where, in mid-winter, they can stroll under the palms as they play. A notable exodus of pleasure and health seekers has started toward this part of the South. They are attracted by the exciting tarpon fishing, and by the sailing and boating to be enjoyed; by the drives to be taken over the picturesque oyster-shell roads; by the opportunity of shooting various game, from deer to quail; by the sweet Southern air; and by strange relics and odd phases of life to be found. Gorgeous hotels are ready for the winter visitors.

Cuba is only ninety miles away, and many have planned little excursions to that island. The Seaboard Air Line Railroad is responsible for a large part of the great winter movement to Florida. It reaches all parts of the State and has most thoughtfully introduced limited trains and every possible convenience for those who desire to journey to the South.

without a proportionate increase in demand, and many, therefore, predict lower prices next year.

"P." Rochester: While I hesitate to advise the sale of United States Steel preferred at a sacrifice, I do not think it is a cheap and safe proposition, even at the present lower level. Many believe that the bonded indebtedness of three hundred odd millions of this great trust represents the intrinsic value of the property. I am told that the cost of the new Lackawanna Steel and Iron Works at Buffalo, when the ratio of its output is considered, is only on the basis of the bonded indebtedness of the United States Steel Trust.

"S." Santa Fe, N. M.: (1) There is no greater assurance of the regularity of crops in Mexico than in any other part of the country. The same visitations of Providence that cause distress in agricultural regions elsewhere occur in Mexico. (2) I advised the purchase of Manhattan long ago. That was the time to have gotten in. (3) I would not sacrifice my Lehigh Valley. Its earnings per mile are nearly as large as those of Erie, while its expenditures for maintenance of way are twice as large as those of the latter. The income of the Lehigh Valley has been largely diverted to its improvement and eventually this will tell in the price of the stock.

"A." Springfield, Mo.: (1) The Mullins suit against the Boston and Montana is for a three-quarters interest in the Comanche claim, one of the best possessions of the Amalgamated Copper Company, some estimating its value as high as \$25,000,000. (2) The new Rock Island bonds are really a second mortgage on the road. Behind them stands only the stock of the old Rock Island Company. Hence their apparently low price. (3) The heavy decline in silver is said to be the reason of the weakness of American Smelting and Refining shares. (4) The resumption of the coal strike early in the new year would be a damaging factor on Wall Street.

"C." Richmond, Va.: (1) It is claimed that Norfolk and Western will earn 8 per cent. on the common this year. (2) The earnings of Baltimore and Ohio last year, it is said, were equal to over 8 per cent. on the common. The condition of this property has been greatly improved. I would not sacrifice my stock. (3) The open break between the large interests represented by Gould and Harriman shows that there is not such harmony among our financial leaders as many have proclaimed. The fight between the Gould and Pennsylvania interests, the Gates-Belmont feud, and the struggle between the Moore and Vanderbilt interests over the control of the Northwest, all indicate that conditions are far from peaceful in the circles of high finance.

"M." St. Paul: If you have read this column regularly, you will have observed that almost every week I have answered questions similar to yours regarding United States Steel common. Whether it will ever sell at 42 again or not depends, first, upon market conditions, which embrace also the condition of the money market; and, secondly, on the disposition and power of the promoters of the steel trust to advance the shares. If they have sold most of their holdings they will not have the disposition to protect the stock. If business conditions do not continue as prosperous as they have been, they will not have the power. It is an axiom on Wall Street that when any stock yields two or three times the normal rate of interest something is wrong with it.

"Bear." Fargo: (1) The outlook for cheaper money this year is not good. It is significant that

Berlin dispatches report that increasing American demands for German money are expected toward the close of the year. (2) One of the evidences of declining prosperity is found in the tremendous shrinkage in the copper stocks, owing to the fall in the price of that metal. This shrinkage approximates \$275,000,000, which means enormous losses to the holders. (3) Vermilye & Co., who are endeavoring to find a market for the new Rock Island securities, would naturally say the best they could of them. (4) The vast combination of Austrians and Hungarians iron and steel industries recently negotiated means still closer competition with our own steel trust, at home as well as abroad.

"G. R. T." Elizabeth: (1) Usually, it is wise not to sacrifice a stock after its price has been cut in two, as that of Amalgamated Copper has. While I have very little confidence in the property, considering the condition of the copper market, I hesitate to advise the sacrifice of your copper shares at present. A speculative whirl might give you a better chance to get out. (2) I regard the Adams Express Company bonds as an excellent investment. (3) Investment bonds are not liable to decline very much unless such a financial crisis occurs as will compel their owners to sacrifice them to protect their speculative holdings. I have from time to time pointed out a number of bonds that yield over 4 per cent. and have merit, including the Kansas City Southern 3s, the San Antonio and Aransas Pass first 4s, the Toledo, St. Louis and Western prior lien 3½s, and other bonds of that character.

"J." Jamestown, N. Y.: The scheme to which you refer is a contemptible trick of some famous Wall Street men. They have been sending out circulars offering mining, oil, and industrial shares for sale at a nominal price and following it with another circular, purporting to come from a different firm, offering to loan money on these shares at a high valuation. When the purchasers of the shares try to negotiate a loan from the second firm the latter replies that it has loaned all its funds and cannot accommodate new customers. Then comes a third circular to the hounded investor, purporting to be from a collection agency, offering to collect the claims of the investor in the bogus companies for a small fee. This agency gets all the papers and other legal evidence from the customer and sometimes makes it almost impossible for the swindled ones to follow up the swindlers in the courts. I wish my readers would bear in mind that Wall Street is a dangerous place for a stranger, unless he has his bearings and knows his business.

"X. Y." Groton, N. Y.: Two dollars received. You are on my preferred list for six months. (1) The American Can Company made a very unsatisfactory showing in its last annual report. It showed about 4 per cent. earned on the preferred. There is \$41,000,000 preferred and the same amount of common stock, and very little other indebtedness. The plant, real estate, patents, etc., constitute the chief assets, aggregating \$75,000,000 out of a total of \$85,000,000 reported. It is said that on a recent decline the shares were picked up by insiders and there has been talk of absorption by the United States Steel Corporation, but that has probably all it can take care of. (2) If I could have 4 per cent. from a savings bank I would keep my money there for the present. Something is liable to drop at any time in Wall Street after such a rise, and the man with ready money can go in and buy dividend-payers and make a profit. (3) As between Atchafalca preferred and the Union Pacific convertible 4s, for speculation and investment, I would rather have the latter. (4) Impossible to fix minimum price of anything in this market.

Continued on following page.

## Spendthrifts

### To INVESTORS. To SAVERS.

What can you get so quick and sure as New York City building lots in the line of growth? Lots from \$500 to \$1,500 each. Last year's prices, \$150 to \$400 each. Lots 20 x 100 and 37½ x 100 feet, \$10 down each, and \$5, \$8 and \$10 monthly. Two hundred millions is being spent to improve transit facilities and beautify Greater New York. Do you want to reap the benefit of others' efforts? All we ask you to do is to investigate. If we do not satisfy you that you can make 100% in three years, do not invest. We allow your fares to and from New York to inspect the property. All representations guaranteed. **Borough Park Co., P. O. Box 255, Madison Square, N. Y. City.**

City of New York, November 20, 1902.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD of November 22 to December 6, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named avenue and street, in the BOROUGH OF MANHATTAN—12TH WARD, SECTION 7, CLAREMONT AVENUE AND ONE HUNDRED AND SIXTY-THIRD STREET OPENING, WIDENING AND EXTENDING, at their north-westerly intersection, and the WIDENING OF ONE HUNDRED AND SIXTY-THIRD STREET AND RIVERSIDE DRIVE, at their south-easterly intersection. Confirmed November 13, 1902; entered November 21, 1902.  
EDWARD M. GROUT, Comptroller.  
City of New York, November 21, 1902.

## Jasper's Hints to Money-makers.

Continued from preceding page.

"Subscriber," Exbridge: No.  
"H." Boston: Not for investment.  
"J." New York: Preference given.  
"F. J." Herl, N. Y.: I do not believe in the proposition. No entry.

"H." New Orleans: Four dollars received. You are on my preferred list for one year.  
"A. D. G." Cleveland: The shares are not dealt in on Wall Street and I am unable to obtain the information you seek.

"Vermont": So far as I am able to ascertain I am not favorably impressed by the plan of the Globe Security Company.

"W." Westminster: One dollar received. You are on my preferred list for three months. J. L. McLean & Co. do a very large business.

"C." Syracuse: I would not sacrifice my Ontario and Western at present. You should be a subscriber at the home office to be entitled to a place on my preferred list.

"P. W." Bridgeport: Thanks for your compliment. I agree with you regarding the Erie River Company's action. The stockholders should organize in their own defense.

"Hal." Pittsburgh: None of the propositions could be classed as investments, and in these troublesome times it would be wise to put your money in nothing else but investment properties.

"D." Annapolis: The Palisades Park Company has a property with less probabilities of an advance than real estate more centrally located. You should be a subscriber at the home office to be entitled to a place on my preferred list.

"C." Des Moines, O.: The scheme may work for a little while, but it is like all the other get-rich-quick concerns and will end in failure. Your friends had better pull out while they have a profit. If they stay in they will surely have a loss.

"C." Troy: The manner in which Metropolitan Traction has been manipulated by insiders, who wanted to insure its control without owning a majority of the shares, has made many doubtful of its investment value. At present I think better of Missouri Pacific.

"L." Allentown: I thank you for your revelations regarding New York L. Development Company. Anyone who purchases real estate ought first to advise himself regarding its location and surroundings. It is unfortunate that you did not do this in the case to which you refer.

"S." Salem, O.: (1) Of course all the propositions to which you refer are speculative and you could not market your holdings in an emergency, on any of the stock exchanges. If you like to deal with propositions of that character the ones you speak of are probably as good as most of those offered to the public.

"M." Philadelphia: (1) I do not advise the purchase of Reading or any other speculative shares at present. (2) While I do not believe in Steel preferred as a permanent investment, I would not sacrifice the shares at this time. An effort to advance them will no doubt be made when money market conditions improve.

"D." Jacksonville: The Mobile and Ohio Montgomery Division First 3s, Evansville and Terre Haute First Cons. 4s, Western Union Refunding and Real Estate 4s, Georgia Central 3s, and Chicago Western Indiana general 5s, I think, are the best bonds on your list, and all are safe, though not yielding a very large rate of interest.

"V." Pittsburgh: (1) I would not sell or buy stocks on a 5 per cent. margin at this critical time. (2) If I owned such stocks as United States Steel, Tennessee Coal and Iron, Canadian Pacific, Union Pacific, and Illinois Central, bought at high prices, I would dispose of them whenever I could do so without loss and wait for the lower level that I confidently expect within a year.

"Montana": No operators on Wall Street conduct their plans of campaign with greater secrecy than those who are, in the public mind at least, associated with Standard Oil interests. The theory that these interests have been picking up Amalgamated Copper on the recent recession is based not upon revelations made from headquarters, but solely on circumstantial evidence, which, of course, is not infallible.

"W." Chicago: The manner in which the new Rock Island issues have been manipulated has made conservative investors exceedingly wary, and yet the tip has been very quietly circulated that all the Rock Island issues are to be advanced. I have no doubt that if the strong influences behind them are able to put them up they will do so, for the purpose of selling out.

"H." Elmore, N. Y.: (1) A number of Reading electric concerns in Germany have combined to meet American competition and oppose the inroads especially of the Westinghouse Company. (2) The passing of the December dividend by the Camp Shipbuilding Company indicates that the shipbuilding industry in the United States is not in the best condition. It will not facilitate the sale of the new Morgan shipbuilding combine's securities.

"W." Brooklyn: (1) Diligent efforts are being made to float the new 4 per cent. Rock Island bonds. They are reasonably safe, but by no means gilded. (2) All such propositions are so highly speculative and controlled by so few people that I hesitate to advise. I prefer to give you an opinion of securities dealt in on the exchanges and regarding which official reports are at least occasionally made.

"E." Creston: Two dollars received. You are on my preferred list for six months. (1) Not dealt in on Wall Street. (2) I would not buy United States Steel common at present figures. (3) The possibilities of Great Western, in view of the important strategic position it holds, give speculative value to its junior issues. Rumors are constantly heard that it is to be absorbed by some of its larger rivals, on a basis favorable to the stockholders.

"J." Austin, Tex.: (1) The merger of the International and National Mexican railroads has been reported. As they are owned by the same interests, such a merger might be beneficial from the standpoint of retrenchment. (2) The decline in silver affects the Mexican railways because, while they must pay the interest on their obligations in gold, they receive payment for their freight and passengers in depreciated silver. The decline in silver is therefore equivalent to a cut in freight and passenger rates.

"Wyndham": (1) The readiness with which a stock can be manipulated for a rise, even in an unfavorable market, by the promulgation of some deal or combination has recently been shown by the sudden advance in Manhattan, while all the rest of the market was dragging. The fact that such combinations are always possible makes one wary of advancing short sales, though I think the entire market is still on too high a level. (2) Everything depends on existing conditions in Wall Street and in the financial world.

"S." Vancouver: (1) But for the vicissitudes of local legislation People's Gas would sell much higher. Around gas it seems to be in constant demand. (2) The phenomenal earnings of Union Pacific are said to justify the high price of the common, but any one can see that there is to be much greater competition in our transcontinental traffic within a few years, and for that reason I regard Union Pacific common as high enough. (3) Glad you profited by my advice regarding Manhattan. I see no reason to buy it now.

"E." Exeter, N. Y.: (1) I do not believe it safe to buy in the present market, excepting for quick turns. (2) Bay State Gas is purely speculative, with possibilities growing out of the proposed gas combination in Boston. United States Steel common represents nothing but water. Southern Pacific has merit, but is in the control of a speculative and gambling clique. You should be

a subscriber at the home office to be on my preferred list.

"A." Dubuque: (1) St. Paul preferred, Chicago and Northwestern, Lake Shore, Pullman, and Delaware and Lackawanna are safe investment shares. I would not advise the purchase of anything until the market is more settled. (2) Erie common is decidedly speculative. It sold last year as low as 25 and as high as 45. Chesapeake and Ohio sold as low as 29 and as high as 51. Both have had a pretty big jump.

"F." Worcester, Mass.: You are not on my preferred list. (1) American Locomotive common has little prospects of a dividend. I think, at the same price, for speculation, I would rather buy Corn Products common or Greene Copper. A cheap, low-priced industrial is Leather common. (2) Unless the demand for copper increases or a combination of copper interests is made, I see no reason for an advance in Amalgamated.

"Ink." Fairhaven, Mass.: (1) Pennsylvania, Union Pacific, and Southern Pacific are all in strong hands, but must suffer with the rest of the market if the liquidation continues, as it probably will. (2) Not at present. (3) If Amalgamated interests should ever succeed in their purpose to control the copper output the stock could be put higher than ever before. (4) Atchafon preferred has merit as an investment, below par, but I am not advising the purchase of any shares at present.

"L." New York: Missouri, Kansas and Texas common sold last year as low as 15 and as high as 35. The road is being constantly improved and the Rockefeller interests in the property are said to be large. I would not sacrifice my holdings at present. Colorado and Southern 4s are a fairly good bond and sell at nearly all they are worth, as the market goes. I would rather have the Canada Southern seconds, or the Union Pacific convertibles. Am not advising purchases now.

"J. R. C." Ottawa: (1) I believe Kansas City Southern, on recessions, is a purchase, but the price must depend on market conditions. Approximating 50, it seems to be picked up by insiders. (2) I look for further liquidation, unless the money stringency is relieved. (3) The safer speculation at such a time is in dividend-paying stocks, in which the liquidation is sometimes compulsory, by reason of the large speculative holdings of those who are compelled to sacrifice them. Careful observation of the market, from day to day, will be your best guidance.

"W." Reading, Penn.: (1) Erie second preferred sold last year as low as 40, Missouri, Kansas and Texas preferred 37, Southern Pacific 30, and Texas Pacific at 24. The prices you give are much higher. Many believe that liquidation must drive stocks to a much lower level. I hardly anticipate that the level for Southern Pacific and Texas Pacific will be as low as that I have quoted. (2) Norfolk and Western sold at 42 last year and St. Louis and San Francisco second preferred at 54. Both have had reason for a rise and on recessions offer speculative opportunities.

"E. D. B." San Francisco: Until the liquidation is more extensive and complete you may expect lower prices. There may be feverish spasms of activity, but the tendency must be downward. It is impossible to state at what figures certain stocks should be bought; everything depends upon how far the liquidation will go. St. Louis Southwestern preferred sold last year as low as 42 and as high as 71. Chicago and Great Western B between 41 and 56, and St. Louis and San Francisco second preferred from 54 to 77. The last-mentioned looks the safest.

"H." Bridgeport, Conn.: (1) At this writing the details of the new International Silver amalgamation have not been disclosed. (2) A very interesting article on the suppression of the bucket shops recently appeared in Money, a paper published in Pittsburgh. I agree with you that they deserve the attention of the New York Stock Exchange and of the legitimate houses and members of all exchanges in good standing. It seems to me that the interest charges to which you refer are very unfair and give the bucket-shop operator a decidedly undue advantage. You should read the article in Money, which covers the matter, very carefully.

"F." Coronado, Cal.: One dollar received. You are on my preferred list for three months. (1) Answered by telegram. (2) You should get your money's worth. (3) Circular not inclosed. (4) This is not a good market to speculate in when you are at such a distance from it. (5) American Sugar is a gambler's stock and I do not advise trading in it, unless you are one of the insiders. Brooklyn Rapid Transit is making a better showing, mainly because it is issuing its large issue of bonds for the payment of extraordinary expenses and improvements, instead of paying for these out of its earnings. The latter apparently are improving for this reason, and on this improvement an effort to advance the stock will be made. Rock Island common, it is said, may be able to earn 3 per cent., but I doubt it. It is highly speculative. (6) In case of a panic all stocks will decline, but the dividend-paying investment securities will decline the least. (7) So does everybody. (8) I only answer specific inquiries as they reach me. Don't expect too much for eight bits. (9) Ditto.

backs, Purcell and Coffin, but none of them were dependable for a whole game, because of injuries.

FULLBACKS.—Graydon recalls Kelly's method of hitting the line more than any man who has played since 1897. He runs low, and swiftly, and with pile-driving force, and is easily the best of the year. Nope of the others approach him, but Torney, of West Point, Shepard, of Cornell, Bennett, of Pennsylvania, were good, and in Kafer, Princeton had a very strong man until he was hurt. Bowman, of Yale, was the best of the freshmen fullbacks, and Coote, the Wesleyan freshman, has the making of a marvelous panther. Quill, of Amherst, was a fierce line-plunger and good kicker; and Foster, of Dartmouth, very valuable, both as a runner and as an interferer.

## OFFICIAL LEGAL NOTICES.

ATTENTION IS CALLED TO THE ADVERTISEMENT IN THE CITY RECORD of November 28 to December 11, 1902, of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears, of assessment for OPENING AND ACQUIRING TITLE to the following named avenue in the BOROUGH OF THE BRONX—24TH WARD, SECTION 11, ANDREWS AVENUE OPENING, from East 180th Street to the south line of the New York University property. Confirmed November 18, 1902; entered November 20, 1902.

EDWARD M. GROUT, Comptroller,  
City of New York, November 20, 1902.

## TO INVESTORS.

MONEY invested in Sheep and Cattle in Montana is safe and pays 30 per cent. A small investment now grows into a large duck in few years. Over 300 men, women and children now have cattle and sheep on our ranches. Write for a small report, a most interesting document. MONTANA CO-OPERATIVE RANCH CO., Great Falls, Montana.

## "This Beats New Jersey"

CHARTERS PROCURED under South Dakota laws for a few dollars. Write for corporation laws, blanks, by-laws, and forms to PHILIP LAWRENCE, late Asst-Secretary of State, Huron, South Dakota, or 220 B'way, 20th Fl., New York.

## American Wagons in Demand.

ACCORDING to the most trustworthy reports there is an excellent opening at Harput, Turkey, and the region round about for standard American vehicles such as carts and traps, buckboards, farm carts and wagons, and also for a limited number of landaus and phaetons. The opening for light, strong carts, such as are largely supplied to the South African market, is specially good, as also for farm carts and wagons or at least for the wheels and axles. There is a pressing need for better vehicles than the crude ox carts and buffalo carts now exclusively used by the farmers of the Harput country.

NOTICE TO TAXPAYERS.  
DEPARTMENT OF FINANCE.  
BUREAU FOR THE COLLECTION OF TAXES  
NO. 57 CHAMBERS STREET  
STEWART BUILDING  
NEW YORK, DECEMBER 1, 1902.

NOTICE IS HEREBY GIVEN to all persons who have omitted to pay their taxes for the year 1902, to pay the same to the Receiver of Taxes at his office in the Borough in which the property is located, as follows:

BOROUGH OF MANHATTAN, No. 57 Chambers Street, Manhattan, N. Y.  
BOROUGH OF THE BRONX, corner Third and Tremont Avenues, The Bronx, N. Y.  
BOROUGH OF BROOKLYN, Rooms 2, 4, 6 and 8, Municipal Building, Brooklyn, N. Y.  
BOROUGH OF QUEENS, corner Jackson Avenue and Fifth Street, Long Island City, N. Y.  
BOROUGH OF RICHMOND, corner Bay and Sand Streets, Stapleton, Staten Island, N. Y., before the first day of January, 1903, as provided by Section 919 of the Greater New York Charter (Chapter 378, Laws of 1897).

Upon any such tax not paid before the first day of December, 1902, one per centum will be charged, received and collected in addition to the amount thereof. Upon such tax remaining unpaid on the first day of January, 1903, interest will be charged, received and collected upon the amount thereof, at the rate of seven per centum per annum as provided in Section 916 of the Greater New York Charter, to be calculated from the sixth day of October, 1902, on which day the tax became due and payable and became a lien as provided in Sec. 914 of the said Charter.

DAVID E. AUSTEN,  
Receiver of Taxes.

## How To Reduce New York's Taxes.

ANY MAN who devises a practical method of lessening the burdens of taxation,

JAMES M. STEVENSON,  
Deputy Comptroller of New  
York City.

without at the same time impairing the efficiency of government through lack of revenue, deserves the gratitude of the taxpayer. One of the chief merits of the Republican State administration has been the virtual wiping out of direct taxes levied on property owners at large. It seems probable, also, that the present authorities of the City of New York will win the regard of the taxpayers by urging a feasible plan for giving them some relief. The municipal expenses of the metropolis naturally tend to a yearly increase, but owing to the laws which provide for strengthening the sinking fund much unnecessary money is turned over to the latter. To obviate this, Deputy Comptroller James M. Stevenson, a very capable official who is well versed in finance, proposes that the money in excess of the actual requirements of the sinking fund be invested in special "general fund bonds" issued by the city, and that the money be placed in the city treasury and applied to reduction of taxes. The annual excess of sinking-fund revenue is about \$8,500,000 and if this were made usable for current outlays taxation could be reduced about ten per cent. Mayor Low, Comptroller Grant, and many leading financiers approve of Mr. Stevenson's idea and an effort will be made to secure an amendment of the charter permitting the adoption of this plan.

## Jasper's Hiats to Money-makers.

Continued from preceding page.

"F." San Diego, Cal.: Keep out of the market at present.

"F." Xenia, O.: You ought to be a subscriber. It's worth it.

"W." Montour Falls: Nothing is known of it on Wall Street.

"Vermont": The circular has not reached me. Will make inquiries.

"M." Jacksonville: I would not pay any attention to his recommendations.

"S." Lowell: At present I would keep out of this market. If it has a decided slump, buy dividend-payers.

"H." Providence: I am against all such blind pools and take no stock in the Finance Company to which you refer.

"G." New York: One dollar received. You are on my preferred list for three months. The Olympus Mining Company's stocks are not dealt in on the exchanges. It is too highly speculative for me to recommend.

"G." Dover, Del.: I am not advising the purchase of the California Con. Oil, the Cameron Land, Oil and Investment, the Penny Express, or the International Wheel, Tire and Rubber Company's shares. Leave them all severely alone.

"L." Covington: (1) Both are reported to have excellent prospects, though I have not been on the ground and cannot speak from personal knowledge. (2) It has been a successful mining venture, paying conservative dividends for many years and having large ore bodies still undeveloped.

"Jule," New York: One dollar received. You are on my preferred list for three months. (1) Ontario and Western has possibilities as a coal road that must not be overlooked. (2) I still think well, on sharp reactions, of Kansas City Southern and Toledo, St. Louis and Western.

"V." Bloomington, Ill.: (1) Reports of the absorption of the Chicago and Great Western by the Vanderbilts may be made for the same reason that similar reports have been made heretofore, to help the sale of the shares. Ultimately, the Great Western will no doubt be absorbed. Otherwise the shares would be regarded as selling at a pretty high figure. (2) The drop in the Swift & Co.'s stock followed the report that the proposed packing house combination would fall through. Various reasons were given for this, but the real one, I believe, is the tightness of the money market and the general indisposition of the public to invest in new industrial enterprises. I advised the sale of the Swift stock when there was a good profit in it.

New York, December 4. JASPER.

Pennsylvania Railroad Company

## If Your Friend Is Sick

Tell Me the Book to Send.

No money is wanted—not from you nor from him. I ask only a postal card, and I ask it as an act of humanity.

Then I will do this:

I will mail the sick one an order—good at any drug store—for six bottles Dr. Shoop's Restorative. He may take it a month at my risk. If it succeeds, the cost is \$5.00. If the sick one even thinks it has failed, I will pay the druggist myself.

Please note what that means. I furnish a costly treatment that I spent a lifetime in perfecting, and whenever it fails the test is entirely free. But failures are rare. My records show that 39 out of each 40 get well, and pay for the remedy gladly.

No other remedy, in chronic and difficult cases, could stand a test like that. The reason is this: My Restorative alone strengthens the inside nerves. There is no other way to bring back that nerve power which alone makes each vital organ do its duty. There is no other way to make weak organs well.

Simply state which: Book No. 1 on Dyspepsia, Book No. 2 on the Heart, Book No. 3 on the Kidneys, address Dr. Shoop, Book No. 4 for Women, Book No. 5 for Men (sealed), Book No. 6 on Rheumatism, Box 945, Racine, Wis.

Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

## Oceans of Sunshine

Acres of roses and miles of palms—that's California in midwinter. Gather flowers and pick oranges. Reached on a high-class train—

**The California Limited.**

Chicago to California in less than three days. Why endure disagreeable weather at home?

The California tour described in our books; mailed for 10c in stamps. Address General Passenger Office, Atchison, Topeka & Santa Fe Railway, Chicago.

## Santa Fe

## A UNITED STATES WALL MAP

**FREE**

This handsome county map, 48x34 inches, is mounted on rollers, ready to hang on the wall. It is printed in colors, is thoroughly up to date and is particularly interesting and valuable, as it shows in colors the different divisions of territory in America acquired since the Revolution. The original thirteen states, Louisiana purchase, the Texas annexation, the Gadsden purchase, the cession by Mexico and the Northwest acquisitions by discovery and settlement. It will be sent to any address on receipt of 15 cents in postage to pay for packing and transportation. P. S. EUSTIS, Passenger Traffic Manager C. B. & Q. Ry. Co., 209 Adams St., Chicago.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the  
information of readers of LESLIE'S WEEKLY. No  
charge is made for answers to inquiries regarding  
life-insurance matters, and communications are  
treated confidentially. A stamp should always be  
inclosed, as a personal reply is sometimes deemed  
advisable. Address "Hermit," LESLIE'S WEEKLY,  
110 Fifth Avenue, New York.]

A DECISION of interest to the members  
of all fraternal orders was recently  
handed down by the New York Court of  
Appeals, in affirming a judgment of two  
thousand dollars awarded a lady in Roches-  
ter, Mrs. Weber, against the Supreme Tent  
of the Knights of the Maccabees, on a life-  
insurance policy taken out by her late hus-  
band. When he joined the order the rules  
provided that the contract of insurance  
should be void if he should commit suicide  
within a year. He committed suicide  
within five years and the order resisted  
payment on the ground that the rules had  
been amended so as to extend the time  
from one year to five. The court held that  
a fraternal order could not, by amendment  
to its rules, deprive a person already insured  
or his beneficiaries, of their rights under  
their original contracts. I call attention  
to this case to emphasize once more the  
danger to which the members of the fraternal  
orders subject themselves. In an old-  
line company there is no such thing as  
amending rules or taking any other action  
inimical to the member or policy-holder.  
He knows at the outset precisely what he is  
to pay and what he is to get. No sensible  
man will make a contract which is not clear  
and definite at the start. In such matters  
as life insurance especially, there should be  
no uncertainties.

"H." North East, Penn.: I see no reason why  
the Commercial Registry Company cannot fulfill  
its offer.

"B." Butler, Penn.: I think very little of it.  
Don't experiment with life insurance. It is too  
serious a business.

"S." Augusta, Me.: (1) The plan is adopted by  
many corporations, but is rather a beneficial than  
an insurance feature. (2) Yes, if the bad risks are  
eliminated. (3) The larger the membership, the  
less the cost.

"L." Resumant, Texas: Both the policies have  
special advantages, but I think, if I understand  
you properly, that a twenty-five-year installment  
policy would, under all the circumstances, best meet  
your requirements.

"K." New Orleans: Of course something de-  
pends upon your circumstances and those of your  
dependents. I hardly see how you would benefit  
by making the proposed change. The New York  
Life certainly lives up to all its contracts.

"S." Sioux Falls: Of course all estimates are  
based on the expectations of probable earnings  
and of the maintenance of certain rates of interest.  
The proposition, however, looks businesslike and  
feasible and the Provident Savings is an enterpris-  
ing and prosperous company.

"F." Sioux Falls S. D.: (1) The Provident  
Savings Life Insurance Society is a prosperous,  
enterprising company, and its annual reports for  
the past few years have shown a steady and health-  
ful growth. (2) As good as either. (3) A rival  
agent is not expected to tell the truth.

"E." Sioux Falls, S. D.: The company has ex-  
cellent management and is regarded as prosperous  
and strong.

## The Hermit.

Personally-conducted Tours via  
Pennsylvania Railroad.

Season of 1902-1903.

The Pennsylvania Railroad Company announces  
the following Personally-Conducted Tours for the  
Season of 1902-1903:

**California.**—Two tours: No. 1 will leave New  
York, Philadelphia, and Harrisburg January 29;  
No. 2 will leave February 19 and will include  
Mardi Gras celebration at New Orleans.

**Florida.**—Three tours to Jacksonville will leave  
New York and Philadelphia February 3 and 17  
and March 3. The first two admit of a stay of two  
weeks in the "Flowery State." Tickets for the  
third tour will be good to return by regular trains  
until May 31, 1903.

**Old Point Comfort, Richmond, and Washington.**—  
Four tours will leave New York and Philadelphia  
March 14 and 28, April 25, and May 9.

**Old Point Comfort.**—Four tours will leave New  
York and Philadelphia March 14 and 28, April 25,  
and May 9.

**Washington.**—Nine tours will leave New York  
and Philadelphia December 29, January 29, Feb-  
ruary 12 and 26, March 3 and 19, April 6 and 23,  
and May 14.

For detailed information apply to Tourist Agent,  
263 Fifth Avenue, New York; 800 Fulton Street,  
4 Court Street, Brooklyn; 789 Broad Street, New-  
ark, N. J.; or George W. Boyd, Assistant General  
Passenger Agent, Philadelphia.

Cookie—"Don't get the pork sausages  
at Brown's, Mary; get them at Smith-  
son's. They do wrap them up in such  
beautiful love-foals, you can't think."

For coughs and colds, the best remedy is Pao's  
Cure for Consumption.

"She seems to have lost her head over  
that young man."

"Yes; I saw it on his shoulder."

**Advice to Mothers:** Mrs. Winslow's Soot-  
ing Syrup should always be used for children teething.  
It soothes the child, softens the gums, allays all pain,  
cures wind colic, and is the best remedy for diarrhoea.

"But she used to be considered quite a  
beauty."

"That was before her father failed."

In the warehouses of Schner & Co., Schner Building,  
170 Fifth Avenue, the reader will find instruments that  
cannot be surpassed, and the purchaser is perfectly  
assured of getting the best article in the market at a  
very reasonable figure.

Can anyone suppose that  
we would double the necessary  
cost of our brewing without a  
vital reason.

Would we spend so much on cleanliness? Would  
we cool the beer in plate glass rooms? Would we  
filter all the air that touches it? Would we age it for  
months in refrigerating rooms? Would we filter it?  
Would we sterilize every bottle after it is sealed?

Can anyone suppose that  
it is our good  
—rather than  
your good—that  
we serve by it?

# Schlitz

We do it to attain absolute  
purity—to avoid the remotest pos-  
sibility of germs—to make Schlitz Beer healthful  
—to escape the cause of biliousness; the lack of  
age and proper fermentation.

Why accept a common  
beer—brewed without  
any of these precautions  
—when Schlitz Beer  
costs no more?

Your dealer may prefer to furnish a beer that  
pays a little more profit; but does it pay you to  
permit it? Isn't pure beer—Schlitz Beer—  
worth asking for? Ask for the Brewery Bottling.

## Gray Hair Restored.

"WALNUTTA HAIR STAIN"

Restores Gray, Streaked, Faded or  
bleached Hair, Eyebrows, Beard or  
Moustache Instantaneously. Gives  
any shade from Light Brown to  
Black. Does not wash or rub off.  
Contains no poisons, and is not sticky  
or greasy. Will dye a complete year's  
hair if you send a stamped and addressed envelope.  
Send for free booklet about "Hair Care." To con-  
vince you of its merits will send you a Trial size for  
postpaid, large size eight times as much as costs. 20c  
See your Druggist; if he can't supply you, write to us.  
PACIFIC TRADING CO., 315 Union Bldg., St. Louis, Mo.

## Something good for Christmas

During the holiday season, when good cheer everywhere prevails, there is nothing nicer to have in the house than a little good whiskey, and besides, your physician will tell you it is excellent in many cases of sickness. But you must have good whiskey, pure whiskey. You don't want to drink poor whiskey yourself, much less offer it to your friends, while as a medicine, poor whiskey, adulterated whiskey, may do you decided harm.

HAYNER WHISKEY goes to you direct from our own distillery, with all its original richness and flavor, and carries a UNITED STATES REGISTERED DISTILLER'S GUARANTEE OF PURITY and AGE. When you buy HAYNER WHISKEY you save the enormous profits of the dealers and have our guarantee that your money will be promptly refunded if you are not perfectly satisfied with the whiskey after trying it. That's fair, isn't it?

# HAYNER WHISKEY

PURE SEVEN-YEAR-OLD RYE

## 4 FULL \$3.20 EXPRESS QUARTS PREPAID

We will send you FOUR FULL QUART BOTTLES of HAYNER'S SEVEN-YEAR-OLD RYE for \$3.20, express charges paid by us. Try it and if you don't find it all right and as good as you ever drank or can buy from anybody else at any price, send it back at our expense and the next mail will bring you your \$3.20. Could any offer be fairer? This offer is backed by a company with a capital of \$500,000.00, paid in full, and the proud reputation of 36 years of continuous success. We have over a quarter of a million satisfied customers, proving conclusively that our whiskey is all right and that we do exactly as we say. Shipment made in a plain sealed case, with no marks or brands to indicate contents.

Orders for Ariz., Cal., Col., Idaho, Mont., Nev., N. Mex., Ore., Utah, Wash. or Wyo., must be on the basis of 4 Quarts for \$4.00 by Express Prepaid or 20 Quarts for \$16.00 by Freight Prepaid.

FREE With each four quart order we will send free one gold-tipped whiskey glass and one corkscrew. If you wish to send an order to a friend, as a Christmas present, we will enclose with the shipment an elegant souvenir card, with both your names neatly printed thereon.

Write our nearest office and do it NOW.

## SULPHUME

Price, \$1.00, express paid

SULPHUME is pure sulphur in liquid form—a new chemical discovery. Sulphur heretofore was considered insoluble. Sulphume when taken internally, and applied as a lotion, will cure any skin disease.

SULPHUME BATHS can be taken at home, having all the advantages (and more) of the most famous Sulphur Springs. One bottle of Sulphume makes ten strong sulphur baths.

SULPHUME SOAP is the only soap in the world made with liquefied Sulphur. That is why it is a Genuine Sulphur Soap. It stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed soap, 25c. a cake; Unperfumed, 15c. a cake. Will mail trial cake upon receipt of price.

SULPHUME SHAVING SOAP is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

SULPHUME LITTLE LIVER PILLS act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

SULPHUME BOOK FREE—In it you will find solid facts about the care of the skin and blood.

Be sure this signature *M. A. Diaz* is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

By CLARENCE LOUIS CULLEN.

With introduction by the author. 32mo, 250 pages, cloth bound, price, \$1.00.

The very flattering reception which was given to "Tales of the Ex-Tanks," by the same author, has induced us to issue this work under the above title, and which we have no doubt will have a large sale. It is printed on the best quality of fine laid paper, and neatly bound in cloth.

### THE SINKER STORIES

By J. JOSEPH GOODWIN.

32mo, 250 pages, illustrated, cloth bound, price, \$1.00. This collection of humorous stories appeared in the New York Sun, and in response to a demand for their publication in a complete form we have issued this book. It contains a style of humor entirely unique, and which has been very popular with the readers of the Sun.

### BILLY BURGUNDY'S OPINIONS

By "BILLY BURGUNDY."

Author of "Toothsome Tales Told in Slang," 16mo, illustrated, cloth bound, 50c.; paper, 35c. We have just issued this new book by this famous author of humorous and slang stories, which will doubtless have a large sale. It is illustrated by new and unique designs.

Any of the above books can be obtained from any bookseller or they will be sent by mail postpaid on receipt of price by

J. S. OGILVIE PUBLISHING COMPANY,  
58 Rose Street, New York.

## "THE MAN IN THE STREET STORIES."

FROM "THE NEW YORK TIMES."

With an Introduction by CHAUNCEY M. DEPEW.  
12mo. 320 Pages. Cloth Bound, \$1.00.

THE MAN IN THE STREET  
STORIES  
from The New York Times

With Introduction by  
CHAUNCEY M. DEPEW

This collection of over six hundred after-dinner stories is now ready. Mr. Depew says of it:

"This collection of stories is my refresher every Sunday after the weary and work of the week. I know of no effort which has been so successful in collecting real anecdotes portraying the humorous side of life as those which are contained in this volume."

Sold by all dealers everywhere, or it will be sent by mail, postpaid, on receipt of \$1.00 by

J. S. OGILVIE PUBLISHING CO., 58 Rose St., New York.

## GET THIS SLEEPING DOLL AND CHAIR

## FREE GIRLS

Send us your name and address and we will mail you 25 pieces of Art Jewelry as well as only 10 cents each. No trade. Every one who offers it to will buy one or more pieces. When sold send us the \$2.00 and we will send you at once, by express, this

## HANDSOME DRESSED DOLL

Nearly one and one-half feet in height, imported directly from Europe for us. This doll has a beautiful beauteous head, blue eyes, curly hair, long natural looking curly tresses, but, dainty shoes and stockings that can be taken off. Lace trimmed undergarments, elegantly and stylishly dressed. A magnificent creature of doll-like, sweet and pretty as a picture, and will be a source of endless pleasure and amusement to the little ones.

This illustration is very much smaller than the doll, but it gives an absolutely correct idea of how it looks. It is from a photograph just taken, and shows the doll all dressed just as we give it FREE. A drawing could be made so as to look better than the doll itself, but this is direct from the photograph, and

## Photographs Tell the Truth

Understand this is no painted cloth rag doll that has to be made up and stuffed, or a cheap, some Doll's Chair, which we are confident will please you. In addition we will also give you entirely free and send in the same when you order the Doll and Chair, eight pieces of indestructible Doll's Food: One plate each of Roast Chicken, Cold Ham, Lettuce, Pine Apples, Pickles, Flaming Potatoes, Grapes and oranges. The food is colored perfectly natural, and we know it will delight you. It is something entirely new and novel and will be wanted by all your playmates as soon as they see it.

### Our Patrons Are Extremely Well Pleased With Our Premiums, as the Following Letters Show:

John B. Mills, Rochester, N. Y., writes: "I received this p. m. all right. I think it is lovely. Well paid me for my work."

Mrs. F. Condon, Jersey, La., writes: "I received, and we are more than delighted with it. It surely surprised my little girl, and she is delighted."

Mrs. Charles Gray, Palm Springs, Ill., writes: "I received doll all right yesterday. It was all right; many thanks."

Rosa Felderbach, East Boston, Mo., writes: "I received my doll from you and was very much pleased with it. I thank you."

Frances Colston, Wakefield, R. I., writes: "I received my doll in due time and am very much pleased with her. She is beautiful."

Katie Livingston, Yonkers, N. Y., writes: "I received the doll Friday all right, and it was just as nice as I expected. Thank you kindly for sending it so promptly."

Mary Welch, Mills, Mass., writes: "I am very much pleased with my doll. My mother would like to know how much you would sell a doll for without selling any goods."

Mrs. J. W. Ballard, Easton, Pa., writes: "I received doll for my little girl and was very much pleased with it. Will answer any question and one may ask concerning it."

Elizabeth Hill, Philadelphia, Pa., writes: "I received the doll with great pleasure and it is very nice. Many thanks for promptness in sending it."

## SULPHUME

Price, \$1.00, express paid

SULPHUME is pure sulphur in liquid form—a new chemical discovery. Sulphur heretofore was considered insoluble. Sulphume when taken internally, and applied as a lotion, will cure any skin disease.

SULPHUME BATHS can be taken at home, having all the advantages (and more) of the most famous Sulphur Springs. One bottle of Sulphume makes ten strong sulphur baths.

SULPHUME SOAP is the only soap in the world made with liquefied Sulphur. That is why it is a Genuine Sulphur Soap. It stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed soap, 25c. a cake; Unperfumed, 15c. a cake. Will mail trial cake upon receipt of price.

SULPHUME SHAVING SOAP is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

SULPHUME LITTLE LIVER PILLS act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

SULPHUME BOOK FREE—In it you will find solid facts about the care of the skin and blood.

Be sure this signature *M. A. Diaz* is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

**SULPHUME CHEMICAL CO.,** Suite 151, 337 Broadway, New York

## A Peaceful Christmas.

NOT IN many years, if ever before, has the world approached the Christmas season under conditions more in consonance with the true spirit of that joyous and auspicious festival than at present. With the exception of a small unsettled difficulty in South America, the year promises to go out to the sound of hymns of peace rather than to the notes of the bugle, and without any war clouds on the horizon, so far as human vision can see. It has been emphatically a year of peace and good-will among the great nations of the earth; and, considering all the history that has transpired during the course of the twelvemonth, it is impossible not to think that it has been a year that has brought the world distinctly and measurably nearer the ideal condition when it will be Christmas all the time and everywhere.

It is true that the pessimist, the alarmist, and the cynic might find not a little in the events of the past year on which to base dark and doleful predictions; and even the sober-minded and thoughtful student of current history may be pardoned for entertaining the fear that certain tendencies in the social and industrial world, certain happenings in the realm of national diplomacy and legislation, betoken strife and bloodshed in the near future. The rapid growth of socialism in Germany, the increasing discontent and unrest of the masses in Spain and Russia, where the heaven of modern democracy is working out its results; the disaffection in Macedonia and other provinces of Turkey, the rival interests of Japan and Russia in the far East, and the seething of China's awakening millions—these things may well be the occasion for anxious solicitude among the lovers and advocates of peace.

It is true also that, while the year has witnessed proposals for a decrease in the military establishments of the nations, notably in France, it has seen no actual steps taken toward the accomplishment of that purpose by any nation. On the contrary, it has marked an increase in the naval armament of England, Japan, and Germany, the last country in particular making a special effort at naval enlargement and with the boast that it will soon be the leading Power in the world in this respect.

Yet in spite of all these things, and notwithstanding other events and tendencies of the day, such as our own long and disastrous labor conflicts, which seem to make for strife and discord rather than for harmony and good-will, we may still indulge the confident belief that the passing year has brought the world along much nearer the reign of universal peace than it has ever been before. Over against all such threatenings and portents of evil as we have mentioned, and more than an offset to all of them, we have the great and most significant fact that the organization of the international tribunal constituted by The Hague Peace Conference has been completed during the year and has heard and decided its first case in due form to the apparent satisfaction of the two litigating nations. It would be difficult to overestimate the significance of this event in its bearing on international disputes and the future peace of the world, especially when taken in connection with the fact that Japan and China have since agreed to refer a dispute to the same arbitrament, and France, through its prime minister, has announced its determination to refer such difficulties as it may have with other nations in the future to The Hague tribunal for adjustment.

With such precedents established and such recognition gained for this wonderful world court and the great principles which it represents, the coming of the day of universal amity appears no more like a vision of the night, the baseless fabric of a dream, but as a glorious reality the full realization of which cannot be far away. These events at The Hague as achieved, and in expectancy, are sufficient in themselves to make the year memorable in the annals of peace and to add a new and higher note of joy to the coming Christmas festival. Nor is The Hague court the only place where the principles of international arbitration have gained large and positive recognition during the present year. The Pan-American Congress, which closed its session at Mexico City on January 21st, and at which nineteen American republics were represented, took action which gives the principle of arbitration a wider and more immediate application among themselves than it could have as directed from The Hague. A protocol drawn by this congress was one in which, when ratified, the nineteen American republics will adopt the principle of obligatory arbitration for a certain

class of cases. This convention provides for the submission to The Hague court of all that class of cases arising out of the claims of citizens of one country against another country for damages or indemnity. Another protocol adopted at this Pan-American Congress was one in which the representatives of ten of the republics agreed to a reference of substantially all their disputes to The Hague court.

Since the Pan-American Congress closed, another important step has been taken in the same direction. The Spanish Foreign Office instructed its minister at Mexico City to take advantage of the presence there of the delegates to the Pan-American Congress to negotiate treaties of obligatory arbitration with all the Spanish-speaking republics of the Western world. Since that time it has been announced from Madrid that nine of these treaties had already been signed and that four more were in the process of negotiation. Only within a few weeks Chili and Peru have decided to come under this compact. These treaties provide that the court shall be composed of a chief official of one of the Spanish-American republics, Spaniards or Spanish-Americans. In case of failure to secure a court of that kind, the disputes go to The Hague court.

Neither should we omit to mention here another happy event of the year, the termination of the long and disastrous war in South Africa under conditions that seem to afford a guarantee against the recurrence of war in that quarter of the world for many years to come, if ever again. Arbitration also won a signal triumph in the means adopted for the ending of one of the longest and most hard-fought industrial wars that has ever broken out within the bounds of the United States; and there is reason for the hope and belief that the findings and recommendations of the arbitration commission appointed by President Roosevelt will be such as to establish relations of peace and mutual interest and good-will between the miners of America and their employers.

These are some of the reasons why the coming Christmas days should be a season of heartfelt rejoicing and true gratitude among all who belong to the tribe of Abou Ben Adhem and truly love their fellow-men. It is quite true that the sorrow and sighing have not yet died from out the world, that pain and disease, vice and crime, cruelty and injustice in all their many and dreadful forms still stalk abroad among men, yet with all and beyond all these things a thousand signs and tokens appear in the life of men and nations to testify to the fact that "God is in His world and all is well."

## Sound, but Not Radical.

WE CANNOT agree with those who are expressing a sense of disappointment over President Roosevelt's second message to Congress, and complaining that it is lacking in initiative, in positiveness of tone, and clear and helpful suggestions in regard to various important legislative measures in which the whole country is concerned. This disappointment, we apprehend, arises chiefly from that impression which prevailed when Mr. Roosevelt went into the executive chair, and which his subsequent course has evidently not yet dispelled, that he is a man of radical views and impulsive character from whom dogmatic utterances and extreme opinions were to be expected on any and all occasions. However true that might have been of Mr. Roosevelt in other years, it will be conceded that since his accession to the presidency he has generally tempered his characteristic zeal and enthusiasm for the public good with discretion and sound judgment.

These latter qualities, it seems to us, are predominant in the suggestions and recommendations which the President has to make in his latest message. He has not, it is true, radical remedies or cure-alls to offer for trust abuses, nor immediate and sweeping changes to recommend in the tariff system and national finance, nor any revolutionary measures to urge in regard to Cuban reciprocity, labor difficulties, or any other matter of present concern. Why should he? Being human himself and not claiming a degree of wisdom and foresight beyond that of others of his fellow-men, President Roosevelt has wisely recognized the fact that most of these problems, and those of trust regulation and tariff revision in particular, are so complex, so involved with other vital issues, that every consideration of public policy and sound statesmanship demands that they be treated with deliberation. He rightly declares that a remedy for such evils as attach to trusts is not to be sought through tariff revision nor through the medium of a Constitutional amendment, but rather through the exercise of powers already vested in Congress. Whatever is done here should be done with care. "We can do nothing of good," says Mr. Roosevelt, "in the way of regulating and supervising these corporations until we fix clearly in our minds that we are not attacking the corporations but endeavoring to do away with any evil in them. The line is to be drawn against misconduct, not against wealth." Where that line itself is to be the President does not indicate, for the sensible reason that he does not assume to know. That is a matter that can only be determined, if at all, by careful deliberation of the legislators into whose hands the question is now committed.

In advising against any "violent or radical changes" in our present tariff system the President speaks in accordance with the best sense of his countrymen. Reciprocity with Cuba is urged for the best of reasons, that we may be able to "control the Cuban market," and with other countries for the similarly good reason that we may "widen our markets" and "secure the lowering of duties no longer needed for protection." In this, as in other utterances in the message, President Roosevelt shows unmistakably that he is not a protectionist of the "right or wrong" type, and would adhere to the protection principle only as far as it clearly conduces to the prosperity and material welfare of the whole people.

As to what the President has to say on the creation of a Secretary of Commerce, on our Philippine policy, forest protection, an isthmian canal, and the enlargement of the navy, there can be no complaint of a lack of directness and positiveness of view. "No policy ever entered into by the American people has vindicated itself in more signal manner than the policy of holding the Philippines," are his words on this subject, and they are the words of truth and soberness despite of all the anti-imperialists may say. The importance and necessity of naval enlargement are summed up in terse and emphatic language. We need an efficient navy because the extension of our power into foreign parts, the building of an isthmian canal, and general advancement of our nation in population, wealth, and commercial influence demand the protection which only an efficient navy can give. We need it not because we expect or desire war—"there is not a cloud upon our horizon at present"—but because a first-class navy "is the surest guarantee of peace."

In our view, therefore, President Roosevelt's message is an able and statesmanlike document, both in what it says and what it refrains from saying. Emphasis is placed upon the points where emphasis is needed and where positive utterance is safe and wise. If Congress will now do its part in carrying out the recommendations and wishes of the President in the spirit in which they are uttered, the country will have reason for profound gratitude.

## The Plain Truth.

THE CONSERVATIVE and wholesome influence of the New York Tribune has long been felt in this community, especially in every effort tending to give New York City better government and to elevate the civic pride of its people. It is not surprising, therefore, to find it cordially commending Governor Odell's frank condemnation of those citizens of superior intelligence, who, as the Tribune puts it, "while professing an uncommon devotion to principle, have evinced not a high-minded independence but a narrow, querulous spirit, and, in some instances, a treacherous partisanship," in their treatment of Mayor Low's administration, which they helped to elect and have morally contracted to support. Our contemporary says with commendable vigor that "if these good citizens had taken care, like Governor Odell, to comprehend, defend, and sustain Mayor Low, their credit for fidelity and usefulness to causes which they have pledged themselves to promote to the best of their ability would have stood much higher." It is not too early to say these caustic words and to say them without apologizing, nor is it too early to say that Mayor Low's term of office is altogether too brief to give him a fair opportunity to show what a conscientious, honest, industrious, competent mayor can do for this great city's best interests and highest welfare.

ONE OF the most important questions which Governor Odell will have to consider in his message shortly to be sent to our State Legislature concerns the enlargement of the Erie Canal, and the method of providing for the many millions of dollars required for this gigantic work. Governor Odell has virtually abolished direct taxes in this State, with the help of the Legislature, by devising new sources of revenue from taxation on corporate and other properties. It occurs to us that he might provide abundantly for the proposed work of canal improvement, by recommending to the Legislature a considerable increase in the liquor taxes. In Ohio, Massachusetts, and other States, the tax on the saloon-keeper is considerably higher, on the average, than it is in New York. There is no reason why it should not be increased in this commonwealth to such an extent as to furnish, during the course of a few years, an additional revenue sufficient to pay almost entirely for the proposed canal enlargement. This increase in taxation would not oppress any deserving interest, would not provoke general opposition, and, in the end, would serve a high moral purpose as well as the best financial interests of the State. It is hoped that this suggestion may be made in some way available, in the recommendations of the Governor, and that the Legislature, under his guidance and direction, may provide for the needed additional revenue mainly along this line. The Republican party owes nothing to the saloon.

THE FRIENDS of the Jews in Roumania have published a list of the recent laws which stirred our government to the diplomatic note which in turn has created such a stir in Europe. We cannot give the full list for want of space, but a few samples will serve to show the harsh and tyrannical character of the laws imposed upon these unfortunate people in that country. One law, passed in 1887, excludes Jews from the tobacco trade, from the public service and public works, and penalizes Roumanians employing Jews in any retail trade. Other laws of later date prohibit Jews from being employed in important posts on railway work, and in any manner in the public sanitary service and health departments. Other statutes enacted in 1898 and 1899 exclude Jews from secondary and upper schools and also from agricultural and professional institutions of learning. But more sweeping than any other is the law passed in March of the present year prohibiting the employment of Jewish working men in any trade or calling. And, as a clincher to this last enactment, a clause was added requiring that Jews coming into Roumania from other lands to exercise a trade or handicraft must prove that similar rights are granted to Roumanians in their (the foreigners') country. Having gone thus far, it is really surprising that the Roumanian legislators did not frame one more law forbidding the Jews to breathe the same air as other Roumanian citizens and thus finish up the prohibitive business.

# The Madam of Cattleland

By Gertrude Potter Daniels

SNOW WAS falling over Cattleland in thick, swirling masses. Simpkins and I sat before the window, feet on the sill, chairs tilted back, pipes in our mouths, watching the drifts pile.

In the midst of our silent contemplation of things outside, the Union Pacific train going West emerged like a trailing ghost from behind the curtain of snow, pulled slowly up to the platform of the station, made a short halt, then moved on again, uttering dim shrieks as it went.

Simpkins took out his watch. "She's over four hours late," he observed, adding meditatively a moment later, "Wonder if she's come."

This roused me. In all my intimate knowledge of the man, never before had he shown interest or concern in a "she." I expressed my curiosity, and he responded, without irritation:

"Why, the madam, Mrs. Durand. Never heard of her?"

I had heard of the Durands; the two brothers who ten years before had owned and operated the largest ranch at Willow Creek. But I had never heard of any Mrs. Durand. I said as much to Simpkins, adding:

"As I remember, Henry Durand was a bachelor, John Durand a widower, and an old-maid sister kept house for them. Where does the madam come in?"

Before Simpkins could answer, the door of the hotel blew open, letting in, all at the same time, a fierce gust of cold wind, a pile of snow, a lady, and two men.

In a second Simpkins was on his feet. Pipe in pocket, hat in hand, he advanced across the room, his countenance beaming.

There were joyous exclamations. Simpkins, sheepish and grinning, put out his great hand, enveloping the small, delicately-gloved fingers stretched forth toward him, while out of the babel of voices this speech presently reached me:

"Mr. Durand and I are going straight out to the ranch to get ready. If you aren't there I shall be very unhappy. Remember, I want every one, just as usual."

The voice was exquisitely modulated. But I think had the tones been those of a bear, no one could have resisted the wonderful eyes, nor the radiant smile.

Her husband's hearty echo of this invitation was needless. Already Simpkins was pledged heart and soul.

After the Durands were safely started on their long, cold ride, Simpkins returned to his chair beside mine, lifted his feet to their corner on the sill, relighted his pipe, and replaced his hat.

"Well?" I inquired.

"The madam," said my friend; then being full of the affair, he continued: "Every twenty-third of December, regular as taxes, the 'U. P.' brings 'em—her and the boss. No matter what the weather's doin', over they drives to Willow Creek. From there they up and sends word to all the cow-punchers that used to work for 'em that they're expected as usual. And on Christmas Day they certainly do have a celebration that warms a man's heart."

"You see, Christmas day is a kind o' particular anniversary for them, and as all of us had a sort o' hand in pullin' that same off, and bein' as how we was all more'n half in love with her at the time of the event already spoken of, why, it seems natural we should join in the jamboree."

The meeting with "the madam" had put Simpkins in high good humor. To my delight, without any prompting, he continued his conversation, beginning where the story rightfully began:

"Ten years ago I was out at Durand's as foreman of the outfit. One day a chap blew in wantin' a job. He'd been workin' the other side of the range at the two-bars-cross ranch. I was needin' extra help, so I took him on. He was sure thing a good man. He knew his business down to the ground, and played fair, and for a long time not a man o' us could trace trouble."

"It was the boss who suspicioned him first. He says to me, says he, 'Sim, where'd you pick up this Fleming?'"

"He come from the two-bars-cross outfit," says I.

"I don't like the looks of his eyes," says the boss, passin' on without more remarks.

"Well, that very week a lot o' us happened to pass through this 'ere town. No sooner had I stepped up to the bar of the hotel—the Last Hope it was then—than the drink-slinger he says to me:

"They do say as how you've a man in your outfit which same is a low-down horse-thief."

"Who's a-givin' you your information?" I asks, some worried, but not a-lettin' it show.

"A man from the two-bars-cross drifted in town yesterday and complained to the dago. He's waitin' outside now for Fleming. In my opinion there's liable to be trouble."

"You see, the dago was justice o' the peace at that time. But I up and answers the drink-slinger:

"Do you think any justice in this 'ere town is a-goin' to rule against a feller for horse-stealin' in some other town? We don't stand for no such rot as that," says I to him, my dander up. I ain't never aided and abetted horse-stealin', but I believe in a self-respectin' and loyal patriotism."

"I walked out on the street, not meetin' nobody. The justice had sure 'nough found Fleming, and bein' a new man in the country and not knowin' his business he was layin' the law down to the cow-puncher in great shape. Just as I come on the scene, Fleming was about to be committed. But sudden-like things changed some, and Fleming was standin' over that justice trampling all over him, not neglectin' any part of his body. The end of it was the justice had to let Fleming go."

"Before Fleming left the town he was drunk—roarin', ravin', crazy drunk. I never see a man before or since that could get the drunk on him that Fleming could. He was ready to play a lone hand through the whole State. But especially and particularly he had it in for that justice."

"In course o' time the justice heard of it and he got powerful oneasy. He sneaks over to me, his dago face too white for good health, and he says to me, says he:

"Simpkins, if you'll protect me from Fleming I'll pay you good. I ain't lookin' for no trouble. I'm law-abidin'. I love the law. I want to do my duty, but I don't want to be cut off in my prime in the performance of that duty. I've a couple o' families dependin' on me for sole support, and it wouldn't be playin' fair to leave them same in the lurch."

"The pay he offered for this protection was sure good, so I hunted out Fleming. 'Fleming,' says I, 'I want to talk to you. You can do me a good turn if you see your way clear to it.'

"Fleming was a-sittin' on a stump, throwin' forty-eights into everything within range. I must say that man was a jim dandy with his gun."

"All right, Simpkins," says he, 'but one good turn deserves another, as the Bible says. If I stand by you, you got to make good to me.'

"Bargain," says I. We shook hands. Then I says, 'The justice is awful nervous. He ain't easy with guns, and he's offered me a salary for protectin' him against you. I'm free to say the price is good, and there's no reason why I shouldn't earn it, providin', o' course, you'll do your part.'

"That's pretty hard, Sim. My hands are itchin' for his decess. But never mind; I'm willing to trade kindnesses. You go right on and protect the justice. I'll keep out of the way. And now—now I want somethin'."

"He waited a long time, it seemin' to trouble him considerable to speak. Finally he blurts out:

"Simpkins, keep me on the ranch just as long as you can, no matter what I do, will you?"

"It was a cur-ous request, and I must say it staggered me some. But I'd a bargain to keep, and I was pledged."

"Well, next day we cut loose from town and rode our herd towards home. Off and on we'd had a long pull of it away from the ranch, so when we arrived at our destination we found some changes, principal and most particular among which same was Miss Mary Douglas."

"There she stood, plain as paint and pretty as a nose-gay, smilin' at all us fellers. You seen her smile to-day, so you're acquainted with its appearance. Well, right there every mother's son o' us belonged to her."

"It seems Mr. John had been upot over the state o' his children's learnin' and had sent East for a teacher, there bein' no schools within fifty miles o' the ranch. So Miss Mary had bespoken the position, and here she was, a-standin' between Mr. John and Mr. Henry with them pointin' out and explainin' things, all as lovely as you please, when up rode Fleming."

"He looked down at Miss Mary. She looked up at him, and in that minute somethin' big happened. It didn't take no mind-readin' idiot to trace somethin' more'n curiosity in that glance."

"I thought over it a long time, but I hadn't a guess comin' as to what we was up against. Fleming was a good-lookin' buck and no mistake, but he sure wasn't her sort, as anybody could easy observe."

"Well, things run on till winter set in. By that time two facts had diffused themselves pretty general to the whole outfit. Mr. Henry hadn't an eye for anybody but Miss Mary. But Miss Mary was consignin' all her attentions to that drinkin', gamblin', good-for-nothin' cow-puncher, Fleming."

"That feller had gone clean bad, but his luck always kept him just in the law. More-some-over, while I was pledged to keep Fleming on the ranch, havin' protected the dago justice for some time for a good sum, Mr. Henry wouldn't hear to lettin' him go either. He was on the boss's nerves all right, but a mighty just man was Mr. Henry. He wouldn't do for that Fleming just because he hated him on Miss Mary's account."

"About now things began to get in a bad way on the ranch. Some Gesabe was stealin' cattle. Just devastatin' the herd, and the boss was growin' plenty yuthful."

"Simpkins," he says to me, 'ther's somethin' mortal wrong here somewher. I can't understand the situation. I can't understand it at all.'

"And I knew the boss wasn't thinkin' only about those missing cattle, but about Miss Mary and her open preference for the only man in his employ he couldn't trust."

"There's dirty work here-a-bouts, sure thing," says I, prompt.

"Ferret it out, Sim," says he, with a keen flash from his eyes. 'I've my suspicions,' he added, then stopped short and would speak no further."

"I had suspicions, too, but they didn't help none. It took weeks to track out evidence, and durin' that spell Miss Mary was around smilin' and sweet-spoken, but every day somethin' showed in her eyes that I would willin' have passed in my cheeks if doin' that same could have eased her any."

"Once I come plumb on her and Fleming. They was talkin' together very low. She was white as death, and so was he. I sneaked away feelin' like a pryin' fool, but full'n ever of wonder at what was between these two."

"Well, December come along. I had been layin' plans regular and gettin' bluffed at every deal, and the cattle was goin' all the time. Then sudden and unexpected I got the evidence I'd been playin' for so long, and that evidence convicted Fleming. He was a bad man for sure. A horse-thief and a cattle-thief, but it was stacked against him now."

"I went to Mr. Henry. 'I've got my evidence,' says I."

"Cold as it was, he was a-sittin' on the porch doin' nothin' but mopin' and not lookin' like himself. Up he riz."

"Well," says he, his face lightenin'."

"It's Fleming," says I, 'and it's time that rascally, low-down scamp stood in line with a bunch o' cold lead. Have I your word, sir?'"

"Mr. Henry sunk back dumb and cold like in his chair. Finally he said, 'No, Sim; no shooting. Take him off quietly to-night and hang him. It's a terrible business so near Christmas Eve, but we must protect our ranch. Does he know?'"

"Not he," says I, and I walked off."

"Half-way to the bunk house who should I meet but Miss Mary?"

"She called to me. 'Mr. Simpkins,' says she, 'I want a horseback ride, but it looks so like snow I'm afraid to start out alone. May Fleming go?'"

"It was a good way to keep the fellow busy for a few hours. So I showed up my primitive simplicity in the ways o' women and called Fleming."

"The two started off on a keen gallop. As I stood lookin' after 'em Mr. Henry came out. His face was flaming. For the first time in the ranch's history he ripped out an oath, demandin' why I'd let that scoundrel, who wasn't fit company for a decent man, go off alone with a lady."

"Because she asked it, sir," says I."

"He stared at me a minute, the anger all dyin' out o' his eyes. 'I beg your pardon, Sim,' he says in his gentlemanly way, and durin' the next hour I did some swearin' on my own account over the state things had got to."

"Well, the afternoon passed. About five o'clock sure enough it begun to snow. The sky just opened up, and first we knows the storm was a rippin' blizzard. Them two riders didn't show up, but Fleming knew the plains like you know a book, so I didn't get oneasy till 'long about six o'clock."

"Near seven it dawned on me that perhaps Miss Mary had overheard me and the boss talkin' about Fleming stretchin' the hemp, and it begun to leak into my brain that mebbe she'd called our hand. I'd been fitchered! That was about the size of it."

"I hunted out the boss. Through the winder I seen Mr. Henry walkin' up and down the floor lookin' mighty sick. Just as I come to the door I heard him say to Mr. John:

"It's no use. John, John, I can't bear it! Whatever she is, I love her. My heart is broken."

"The cry in his voice stabbed me. 'By the great horn spoon, I'll find out what she is,' I says to myself, and goes away without lettin' 'em know I heard."

"I got my guns and I rode off to town. I wanted to make things lawful, so I called on the mayor. He was playin' poker with the judge, but when I asked permission to shoot a cattle-thief on sight he riz up and shook my hand and told me to go right ahead, and the judge he promised to go on my bond."

"O' course it was too late to do anythin' that night, but before daylight I was off. It was still snowin' considerable and the wind was terrible. I couldn't help a-thinkin' where and how that gentle, white-faced girl had spent the night, her not bein' used to exposure."

"After calculatin' some I put Fleming over in the mountains where a man always runs if the law's hot after him. So I headed that way."

"The snow had shut off the trails, and landmarks was growin' scarce. I managed to keep my bearin's, but not a horse-track did I find. Night shut down with the storm increasin', the wind howlin' like a chorus o' furies, and I miles away from a shelter."

"I spent those hours o' darkness fightin' to keep awake, not darin' to sleep for fear o' freezin'. In the mornin'—Christmas mornin' it was too—you can back my word when I mention I was plumb exhausted."

"While I stood squintin' around to get my bearin's, the wind carried the sound o' somethin' comin' my way. Sudden my horse gave a snort of friendly greetin', and if you'll believe me there was Fleming and Miss Mary ridin' along both a-sittin' on one animal.

"We seen each other through the snowfall at the same minute. I reached for my gun. She seen the move. She gave a cry like a hurt animal, and threw both her arms around that miserable chunk of a cow-puncher, placing herself so's to protect his body with her own. The move bluffed me. I forgot to shoot, and that minute lost me the game.

"She whipped up Fleming's animal, which same was a buckskin not much on looks, but a runner to the death. I jumped for my horse, and the race was on.

"I lay out to do my best, but the distance between us never narrowed an inch. Nor did the girl swerve from the hulk she was shieldin'.

"We tore on like all possessed, plowin' through the drifts, poundin' over frozen ruts, and so thick was the fallin' snow that I never noticed we was goin' straight for the ranch till the bunk house hove in sight.

"He'll scratch gravel now, sure," thinks I as we came tearin' up and I seen the men runnin' out to meet us and take a hand in the game.

"I could catch the glint of a dozen gun-barrels, and I hollered out:

"Be careful. Don't hit her," for I didn't want to see the girl hurt.

"But another voice yells louder'n mine: 'Men, this is my business. Put up those guns.' And Mr. Henry stood in the road, his face hard set.

"The girl pulled the buckskin short up on its haunches, and the creatur' stood quiverin' and pantin' about three

feet from Mr. Henry. Things dropped mighty still. Over in the barn we could hear a pup yap.

"WE SEEN EACH OTHER THROUGH THE SNOWFALL AT THE SAME MINUTE."

"Miss Mary held out one hand toward Mr. Henry. 'Don't kill him. He will restore the cattle he stole. I made him come back. I promised him protection, and I have kept my word to him always from the time mother put him a little baby into my care. Don't make me break my promise now, when his life is in danger. I know he has done wrong, but I love him. He's all I have in the world. He's my brother.'

"Her voice broke off sudden, and she swayed from the saddle just as Mr. Henry sprung towards her. He was cryin' out a lot of things the rest o' us had no business to hear, and just as we fellers was makin' tracks for another section of the earth the boss took Miss Mary in his arms like she was a little child, his face a-beamin' with love and happiness.

"Well, that afternoon Mr. John and Mr. Henry sent out an invite includin' and encompassin' the whole outfit. We slicked up and went to the house, and the boss set up a celebration the like of which none o' us chaps had ever experienced before.

"Mr. Henry and Miss Mary was joined in the bonds o' matrimony New Year's Day, and every Christmas and New Year's since we all goes to the ranch and repeats the festivities we had ten years ago."

Simpkins refilled his pipe meditatively.

"What became of Fleming?" I inquired.

"The boss set him up in the cattle business, he took his rightful name again, and when he arrived at a state of substance he just naturally had to be an upholder of the law."

"Of course," I acquiesced, somewhat overcome with the code of ethics expressed in Sim's last sentence.

"GOING! GOING! GOING! THIS BEAUTIFUL CHRISTMAS GIFT."

# My First Offense

By Joaquin Miller

WE THREE men were "strollers" up and down the mining camps of the Sierras; or, rather we two men and a half, for I was but a boy, and a badly banged-up boy at that, having lately been in an Indian battle that went against us. The preacher and Timothy McCord, who could sing, picked me up to write posters and also help pack blankets, pick, pan, shovel, and little things like that. And so we trudged from camp to camp, singing when we could and mining when we must.

The preacher—not that he ever preached; they named a man according to his looks, not his acts, in those days—had a "manner," and he was great on taking up collections. We never had a doorkeeper.

Hangtown was good to us, and we built a cabin about two miles up a steep, deep gorge, washing week-days, and singing and taking up collections, mostly the latter, Saturday nights and Sundays and holidays, and especially on Christmas.

The preacher had an old camp-meeting hymn, a sort of chorus, in which all the miners would join:

"Where, now, is the good old Moses?  
Far away in the Promised Land."

I guess he was a good man—a feeble type of the Lorenzo Dow and Peter Cartwright sort, when those grand old prophets in buckskin kept watch along the woody banks of the Wabash, away back in the morning of our nation's glory.

But good old Moses got worn out, and the preacher and his timid little partner insisted that I could and should write a new refrain, of a religious sort, to a certain air. Taking Bible texts entirely, I tried several, but only this one, my first song, seemed to suit:

"Now Samson was a mighty strong man,  
But sheared as a sheep was he;  
For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

"Wise Solomon had seven hundred wives—  
And also a dys-pep-sie;  
For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

There were many other verses, possibly some of them better, but none possibly worse. But the chorus took, and took tremendously. We hadn't got half way through the thing that first Saturday night before the miners, who always wanted to hear and have something about a woman, took up the last two lines of each verse and made the rafters ring with:

"For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

Now I am not dead sure that I wrote this. Indeed, the chorus seems so true and pointed that I half suspect it came down to us with the mint marks of ages upon it. Maybe the preacher gave me the chorus as a starter. I only know that I got the credit; and I believe I had never heard of the thing till that time.

Money? Fame? I didn't get a cent of the collections—didn't think of it, or care a sou. But fame! such fame!

We didn't do another lick of work. We sang everywhere, up and down, and the preacher always had me

called up to make a bow, and gave me great credit. Credit? It was all credit, no coin!

Then I wrote another chorus:

"Tough battered and old, our hearts are bold  
But off! do we rejoice,  
For the days of old, the days of gold,  
The days of Forty-nine!"

"We are weak and astray, we are cast away,  
Poor, battered old hulks on the bars;  
But we hope and pray on the Judgment Day  
We will strike it up in the stars."

Now I am not certain that I wrote all of this other song of many verses. Miners would improve on my work as they helped us sing. But I got the credit, have it yet; only credit, as before. I was but a lad, hurt, half sick, and I always had been as timid as a girl. Then, what had I to do with money, anyhow? I didn't drink, didn't eat much. Come to think, I was the cook, too. The preacher would get the meat and beans when we were tramping, and then praise my cooking. That settled it! Poor, timid writer of rhymes, I only wanted kindness, praise, foolish flattery.

One of the boys came back from San Francisco with a roll of *The Martial Advertiser*. Tim—Bucker, the Hangtown boss, had named him Timid Tim—was struck by the "ad." of an Australian woman, who claimed to be "youthful, affectionate, and a good, plain cook." He read it over and over to himself, and then aloud. Bucker walked straight up to where Timothy McCord sat on the edge of a table, Howling Wilderness Saloon:

"WILL YOU MARRY HER, TIM, IF WE SEND FOR HER?"

"Boys, I've called him Timid Tim, but here sits the boldest man in Hangtown. Will you marry her, Tim, if we send for her?"

Tim instantly straightened, brought his right hand up on a level with his brow, in a perfect military salute, by which we knew that he had been in the British army, but we never knew more of him. He was truly the most timid creature I ever knew, except my sickly self, in those old, old days. He could never open his mouth without first making that salute, and never could, or at least never would, try to sing without twisting his head around and around in both hands.

And now the preacher passed the hat, as the chorus rang:

"For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

The collection was enormous, but as the preacher began to put his hand in the hat Bucker went right up, took it, and dumping nuggets and all on the table, handed back the hat. Then he put the money in a sack and told Tim to take it and the outgoing stage and bring back his wife with him.

In about a week came Timid Tim and "Calico" deeply veiled. Tim explained that Mrs. McCord had suffered greatly from sunburns on the boat to Sacramento and had been badly shaken up by the stage. Boss Bucker had ordered the boys to build a big cabin the Sunday before on the banks of our roaring gorge, near our old cabin, explaining that "the social atmosphere of the city of Hangtown could hardly be conducive to the repose and comfort of a confiding young spouse."

Ten great bonfires had been prepared. The pines stood out in the fullness of primeval splendor. Their topmost plumes waved, nodded, and quivered as a thousand lusty throats sang, in melodious unison:

"For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

Then Timid Tim led forth his blushing bride. He loved her—you could see that as he helped her put by

her heavy veil; and he was proud of her—you could see that too. He helped her up, explaining that she was very weary. Bucker stepped forward; then he suddenly stepped back with a stiff bow, back and out of sight among the boys, and was seen no more. The boys, one by one, melted away, as poor Tim led her to the roots of the nearest tree, where she leaned a moment and then sank down in a heap.

I never in all my life saw but one entirely ugly woman, and that one was Mrs. Timothy McCord; dead drunk, Mrs. Timothy McCord, of Hangtown, Cal. Her nose was about the size, and entirely the color, of a red-ripe cherry, and it seemed as if a bird had been pecking a little at one side of it. But she had married a fairly good man with a pot of money, and this man loved her, was proud of her before the world.

As the fires died away and the pines seemed to step back a little, the happy man slowly hustled her back into the sweet-smelling big palace of the Sierras and—Curtain!

But there came a sound, a song with a touch of tenderness in it—of pity, maybe—up the steep from away down toward Hangtown, through the pine-tops; for surely it was none of their business, and they knew it, if he loved her—and the song was:

"For-r-r a woman she can do more with a man  
Than a k-i-n-g and a whole arme-e-e!"

## Christmas in Pennsylvania

By Rodney Blake

DURING THE early days of the commonwealth of Pennsylvania, the celebration of Christmas Day was excluded by the Quakers. At a period coeval with the preaching of George Fox, the Quakers declared that members of the Society of Friends could not "conscientiously unite in the observance of public fasts and feasts and holy days set up in the will of man. . . . there is no inherent holiness in any one day above another, but every day is to be kept alike holy." The Presbyterians were in union with the Quakers upon this subject. For seventy years and more Christmas in Pennsylvania was of no more importance than an ordinary day. None of the beautiful English customs so charmingly described by ancient and modern writers were observed. If there was any feasting it was limited to the usual family dinner, with its chief piece of fowl or of roast beef. But there was no revelry, and the day passed in as dull a fashion as any other. The Christmas observance came with the increase of German settlers, who brought from the old country the continental customs. The Moravians began to arrive about 1740. They gave a week to the celebration of Christmas, commencing before and ending after the memorial day. There was music and feasting, and a bountiful supply of liquor.

The Putz and Christmas-tree appear to have been of German origin. The Putz was not a festooning of rooms

with garlands and wreaths, but a scenic representation of some landscape in which were represented mountains, valleys, lakes, waterfalls, and villages. The grand Putz was the work of many evenings in the fall and early winter. It was too much for the opportunities of many families, but each household had its own decorations, also called a Putz, which might be nothing more than a white cloth or sheet tacked to a wall, on which were fixed branches of evergreen, bearing glittering stars, wax or wooden figures of angels, bright candles and burning candles. The ordinary household Putz was the predecessor of the Christmas-tree of our own times, which has become an institution in so many households.

One of the English customs which obtained a foothold in old Philadelphia was the masque of the mummers—a custom kept up from the middle part of the last century to within fifty years of the present day. The mummers were usually young fellows, who dressed in fantastic costume, took upon themselves character, and went from house to house reciting certain rhymes and expecting "dole," which they generally received in the shape of pennies or something to eat and drink. The English Christmas masque of "St. George and the Dragon" was the foundation of their little play. With patriotic feeling, however, they Americanized the amusement, supplanting

St. George with George Washington, and the dragon became Beelzebub. The rhymes were rude and simple:

"Here come I, old Beelzebub,  
On my shoulder I carry a club,  
In my hand a dripping-skin;  
Don't you think I'm a jolly old man?"

The Father of his Country was inferior in importance in the play to the father of evil. The former's speech commenced:

"Here am I, great Washington,  
On my shoulder I carry a gun."

The mummers were an attractive feature. There were mysteries about their coming and going, and it was a point of etiquette that, however transparent their disguises might be, none who saw them should be allowed to address them by their proper names.

About fifty or sixty years ago, in Philadelphia there arose a custom among young people, of promenading Chestnut Street on Christmas eve and on Christmas afternoon. Thousands of persons, dressed in their best, were seen abroad on that day. The throngs became more dense with each return of the anniversary, and the celebration became a great nuisance. It was particularly such when the tin horn was introduced and blown by thousands in a distracting din. The mayor of the city was finally compelled to suppress this senseless and annoying practice.

# Esther's Strange Christmas Present

By John Matthews

LITTLE ESTHER, being eight years of age, was old enough to scrub floors and take care of the baby. I wish you could have seen her the day when I first saw her. It was the middle of a summer afternoon, and I noticed her because she was so much prettier than the other children who played on the walks of the little recreation park in the crowded tenement district. Yet she was the most poorly clad.

Her hair was wonderful. It just reached her shoulders and the curls were as yellow as a dandelion blossom. She was attractive, too, because she was straight-limbed and erect, with a grace in all the movements of her body. And then her eyes were big and blue and frank. She was constantly at the side of the little waddling baby. Frequently she stooped and lifted the little one into her arms, carrying it to a bench at the side of the park walk. This required all of Esther's strength. One felt a constant fear that the arms of the little girl of eight were not equal to the burden, and thought with a shudder of a fall to that hard pavement.

The child's plaything was an old tin cup, and her only amusement was to throw the cup down on to the pavement. And as regularly as she did it Esther would walk around the bench and pick it up and place it carefully in the baby's hands. Such patience I had never seen before. Once the baby laughed. It was an unusual expression for that little old woman face, and the sister, seeing it, burst into a happier laugh still, and hugged the baby with joy. And when little Esther laughed she was prettier than ever, for it gave more light to her blue eyes.

At intervals, when a moment's relief from the care of the child gave her time to think of something else, Esther would talk to me.

"I didn't want to tend de baby," she confessed. "I was scrubbin' de flaws an' me wrist hoit, an' me mother said I could keep on scrubbin' or 'tend de baby. Me nuther slapped me hih an' lhb; she touched her finger first to one cheek, then to the other."

"Why?" I asked.

"Cause I didn't want to 'tend de baby," said Esther. This mother, Esther told me, did not permit her children to play with any of the others in the tenement. It was not because the woman felt that her little ones were better than the others—not that by any means. Her reason, far more practical, was this: There was danger that the children playing together would quarrel—as children do, and particularly the children of the tenements, whose life, being abnormal and unhealthy, breeds meanness and petulance—and that the quarrels would result in noisy fights, giving rise to a complaint from the neighbors; and then the family would be suddenly and roughly ordered out of the place by the landlord.

All during the afternoon in the recreation park Esther watched the little sister patiently. Sometimes when Esther's back was turned the little one would slyly climb down from the park bench and quickly toddle away, never once looking back, walking rapidly, it seemed, for such little, unsteady legs. Then Esther would discover that the little sister had gone and there would come suddenly into the little face under the yellow curls a look of fear, until her eyes caught the little one wandering farther and further away, down the long walk of the recreation park. Then Esther would turn and run rapidly toward the baby runaway, calling "Lillie! Lillie!" as she ran. And as I saw her running down the pavement, her little round legs flying fast, and as I watched her finally turn the corner and disappear behind a cluster of shrubs, I thought that I would never hear again of little Esther, the eight-year-old scrub woman and nurse maid, whose home was on the fourth floor, rear, of an East Side New York tenement house, where rags were hanging from the window sills and fire escapes, and the air was foul and stagnant, hot in summer and bitterly cold in winter, and there was never too much food to eat.

But nearly eight months afterward I did hear again of Esther and her baby sister, and that is why I am telling this story of little Esther's strange Christmas present.

It had been a cold December, and there had been much suffering in the tenements, for coal was dear.

When the sun shone the children all went down into the street and played on the sunny side of the way. The air chilled them and they clung close to the doorsteps. Those who passed hurriedly along the sidewalks stumbled

over these children, but the little ones paid no heed to this. If they fell to the pavement they scrambled to their feet again without a word. This treatment they had known from babyhood and they were used to it.

It was the day before Christmas. Oh, what a day of mystery—what a day of happy anxiety! A day in which is concentrated all the joy of anticipation, in the comfortable American home! But the day before Christmas would have been much the same to Esther as any other bleak day in winter if little Lillie, the baby sister, hadn't run away.

As on that summer afternoon when I first saw her little yellow curly head, Esther was 'tending the baby. For an hour they had climbed about the doorstep, the winter sun shining full upon them. Then a little girl whom Esther had never seen before came across the street. She had big dark eyes, and she was no older than Esther. Her hair was black. The little dark-eyed girl sat on the edge of the sidewalk and began tossing in the air and catching in her hand some queer little iron things which looked like two small crosses put together. Esther watched her a minute. Then she asked:

"What's them?"

"Jacks," said the other girl.

"What's they for?" asked Esther.

"To play with," said the other; and soon the two children, with their heads close together, were earnestly playing on the edge of the sidewalk. In the mystery of the new game Esther had forgotten everything else. She had even forgotten her baby sister, who was now clambering down the short stairway of the tenement, and now waddling slowly down the street, past the other doorsteps and among the scores of other children, without once looking back. And now she had turned the corner; and still she wandered, past the carts that filled the streets, past more crowds of children, through street after street of the great tenements, among strange new people and houses.

No one noticed the little stranger. After all, she was much like hundreds of others with whom she mingled. And still she wandered along, walking with her little feet wide apart, stepping unsteadily. At first she smiled at the thought of her freedom, then her face expressed infant curiosity, then she began to grow a little anxious, and she was trying to find home. But she turned more corners and without reaching the familiar street. Once some boys running heavily along the sidewalk struck her, so that she fell violently. She cried a little as she clambered to her feet. But she didn't cry aloud, because she was frightened. She said "Mamma!" once or twice, but no one heeded her. And still she toddled on.

A half dozen blocks away were two little girls playing "jacks" on the sidewalk, one with the tumbled yellow hair falling over her forehead, the other whose hair was straight and black. It was a long time before Esther looked up to see what the baby sister was doing. The child was not in sight. Esther jumped to her feet. She looked anxiously in all directions. She called "Lillie! Lillie!" not too loud, fearing that her mother would hear her. Then she ran down the street. At first she was afraid that her mother would miss her and would afterward punish her for letting the baby run away. She dreaded that. Then another fear, deeper, more awful than the first came to her. What if the baby should be killed by a wagon or car? What if she should be lost and never be found? What if she should grow hungrier and hungrier and starve to death?

Esther's heart stopped and she burst into tears. Still she ran through the streets, always looking through her wet eyes for a baby that walked with its little feet wide apart. The picture was distinct before her. How she hoped that as she turned each corner she would see that familiar little round back and the little cap tied on with an old piece of cloth. The winter night was coming on.

It was Christmas Eve! All through the land happy fathers and mothers were lighting the tapers on a thousand beautiful Christmas-trees. Exultant, excited children were dancing about in the light and warmth of the homes of love and plenty. They were laughing and singing and clapping their hands, and the frost on the windows only made the bright rooms seem all the brighter and the children the more blessed and secure.

And even then little Esther was running through the cold and darkening streets among the tenements, sobbing and calling over and over again the name of her baby sister who was lost.

I must tell you of Paddy Ryan, the longshoreman, and the queer little place where he lived, for Paddy Ryan is the Santa Claus of this story of Esther's Christmas. In honor of the holiday Paddy had stayed late at Flynn's, on Front Street, and as he walked out in the starlight I am afraid that his course was in semicircles, an arc first to the right and then to left, but always tending toward his little cabin, a tiny house no bigger than the closet where we hang our clothes. But it had a solitary window through which poured a broad band of light, and a solitary smokestack which gave out a hearty cloud of smoke, for Paddy knew that it would be cold when he got in that night. And as he steered for the light, a safe port in a storm for him, he stumbled over the loose planks that lay along the water front; and in his ears was the sound of the icy waves as they beat incessantly against the dock, always restless and impatient, complaining over and over again of their confinement, a melancholy sound in the dead of a winter's night.

Paddy reached his door at last and put his hand for-

ward to lift the latch. As he moved to do this his feet touched a soft bundle and Paddy was a little startled. He moved the bundle with his toe and its very softness made him stoop and touch it. Then he put both hands around it, for the bundle was the body of a little child. He lifted it in his arms, but it made no sound. He touched the small face, and it felt cold to his fingers. Then he opened quickly the door of his little shanty. There was a lantern in the corner of the room, and an old chair without a back placed in front of the little stove. Paddy sat on the chair and lifted the body which he held, so that the lantern light fell upon the face. What he saw made his heart sink. For some time the man sat still, looking at the child which he held in his arms. He had been a rough man about the docks for many years. His clothes were stained with the splash of salt water. His skin was rough and red from the weather; his face marked with the scars of bar-room brawls. He knew nothing of the tenderness and sweetness which is inspired by the very frailty of children, for he had never known a child. His association with childhood was to kick the street brats out of his way when they crossed him. Paddy Ryan was in a predicament now.

"I hope de kid ain't croaked," he muttered.

For once it was fortunate that Paddy liked his "tea." He had in his pocket a bottle of liquor. And as he sat before his roaring stove, the silent baby in his arms, he thought of this. He pulled the bottle from his pocket, he took out the cork, and put the flask to the blue lips of the child. A bit of the warm liquor went down its throat. Then Paddy waited, hugging the baby close to his breast as he sat before the fire. His body swayed a little. His face was very red. His eyes had a soft film over them and his thoughts were incoherent, for Paddy had done full justice to the holiday. He only half realized it when the little body in his arms grew warm and then began to move, and the eyes in the white face opened wide and a little mouth said "Mamma," and the little child began to cry. Paddy was greatly distressed. He swung the baby from side to side so vehemently that one would have thought its head would fall. Then he held the little one in his hands in front of him, moving it up and down rapidly, like the plunger of a churn. Still the crying continued.

The voice even grew louder, and Paddy Ryan was more and more alarmed. No one else heard the sound. The street outside was silent. There were revelers in the saloons, but their own laughter and quarreling and singing filled their ears. Paddy was alone in his shanty with the sea splashing against the dock near by. If his fellow-longshoremen could have seen him then, how they would have roared! Paddy knew not what to do. Then he thought again of the bottle and he gave the baby another drop from it, and soon afterward the child grew still, the eyes closed, and the little girl who had run away—Lillie, the little sister of Esther—fell asleep in Paddy's arms. And soon the longshoreman, too, dozed and nodded by the fire.

Morning came and Paddy awoke with a start, astonished by what he held in his arms. His astonishment had a strange fear in it. He couldn't account for the child. He remembered nothing that would explain its presence. He knew that he had been drinking the night before, but where did the baby come from? Then, little by little, the events of the midnight came to him—the bundle at the door, the crying of the child, and how he had ministered with the bottle. The bottle! Paddy took it from his pocket and gave it a long pull. Then he realized at once what he should do with the baby. It had awakened and was crying rather feebly. Paddy thought of the police station and took the baby there.

Even a great city like the American metropolis, with its four millions of people, seems very small sometimes. So it was not strange that little Esther was found that Christmas

morning, just before the stars went out, still trotting through the dark and empty streets, still crying out her little sister's name. Occasionally some one stopped her and asked, "What's the matter, little girl?" She pulled away from these and hurried on. She felt a secret conviction that something would lead her to the lost baby. In the midst of her sorrow and awful fear there was something that gave her confidence. She didn't realize that it was so cold and that she was very hungry.

A policeman stopped her. Even then she wouldn't tell her name nor the number of the tenement which was her home. She asked him if he had seen her little sister.

"PADDY LIFTED THE BODY."

"A POLICEMAN STOPPED HER."

## Mrs. Gould's Christmas Treat for Poor Children

By Harry Beardsley

IN THE midst of a hundred little children from New York's homes of barest poverty last Christmastime stood Howard Gould, one of the richest young men in America, both his hands filled with big red apples. Near him was Mrs. Gould, who was the beautiful actress, Miss Katharine Clemmons. Not far away a gorgeous Christmas-tree glittered with lights and tinsel. A Santa Claus, hidden behind white whiskers and in furs and leggings, was cutting capers to the sound of music. And in a wide circle surrounding all were the one hundred happy little waifs.

This was the scene in one of the rooms of the Tuxedo at Fifty-ninth Street and Madison Avenue at Christmas time. Mr. Gould wore a black frock coat. Mrs. Gould was richly gowned, and in contrast were the plain, thin, dark clothes of the little children. One of Mrs. Gould's friends was at the piano playing popular airs, the same which the children had learned from the hand-organs in the street. With great spirit she brought from the keys the strains of "Mister Dooley," "Mamie, Am't You As-hamie?" and "The Good Old Summer Time." And as she played, the children sang so lustily that the room became much too small for the sound.

For five years Mrs. Howard Gould has given a Christmas-tree to about a hundred of New York's poorest children; and she was successful in this—she removed the awe and fear which these children would naturally have felt in the presence of the evidence of great wealth. She made them genuinely and unreservedly happy.

The children were gathered from East Side missions and taken in a huge covered coach to the Tuxedo. Most of them were little dark-skinned, dark-eyed, black-haired foreigners. Then a carriage rolled up, a jaunty footman sprung from the box, opened the carriage door, and Mrs. Gould and one of her friends stepped out. It was about two o'clock in the afternoon of the day before Christmas. Up stairs in the big building two rooms were ready for the celebration. One was a small audience room. The other was larger and in the centre was the glowing Christmas-tree.

The children were taken into the audience room first, and a young minister spoke to them.

"Now, children," he said, in the tone which speakers always use to children, "why do we celebrate Christmas?"

"Because Christ was born!" shouted a chorus of treble voices. These little black-eyed children are not stupid.

"Do you like to get presents?" asked the minister.

"Yes, sir; yes, sir," they said, eagerly.

"Now, why do we give presents at Christmas time?"

After this question from the minister there was a sort of murmur and a pause of perplexity. Then one little boy, 'way in the back of the room, shouted, his voice very loud and clear and joyous:

THE DANCE AROUND THE GAUDY CHRISTMAS-TREE.

"To make us happy!"

It wasn't just what the minister wanted, although he was evidently impressed by the truth of it. So he explained another reason, and that was because Christ had been given to the world on that day. The clergyman talked only a little while longer, and then he said:

"Now, children, I want you to repeat this after me. Listen.

"Mrs. Gould, we thank you, and wish you a very merry Christmas."

The minister paused, lifted his hands, and the children repeated word by word, very vociferously, what he had told them to say.

Mrs. Gould was at the back of the room. She smiled and then looked down, still smiling, and the children turned to gaze at her.

Then a sleight-of-hand "professor" appeared and performed many tricks, and after that he gave a Punch-and-Judy show, and the children were delighted, screaming with laughter. When that was over, coffee and cakes and sandwiches and cocoa and candy and fruit were passed to the children where they sat; and Mrs. Gould busied herself helping them. After they had eaten heartily, folding doors were thrown open and the Christmas-tree in all its glory burst upon their sight.

A march was played at the piano, and Mrs. Gould led the children around the tree.

Then the hundred little waifs sat down in chairs and the distribution of presents began.

In the meantime Howard Gould had appeared, and he helped Mrs. Gould and the others in the distribution of the presents.

All the cakes and fruit were on a long table at one side of the room, and Mr. Gould stood there handing the big red apples to those who took them to the children. Then this millionaire Santa Claus himself delivered some of the apples to the little guests. Mrs. Gould was constantly going from the table to the tree and then among the little ones, so none was neglected.

She stopped a moment and looked at them pleasantly.

"I guess they are having a good time," she said, smiling.

Then she went to satisfy the wants of a little girl who had received no apple. It was a busy scene. The Gould footman and coachman in their livery, holding themselves very rigid, and a man servant in livery and brass buttons, Mr. and Mrs. Gould and their friends,

and the Santa Claus—who was the magician of the other room—were all rushing this way and that to see that one hundred of the poorest New York children were properly waited upon.

The presents were as practical as the means of entertainment. For each little girl there was heavy, woollen material for a dress, and besides this a doll and a little wooden bird in a cage. For the boys there were shoes, mittens, tops, or drums.

When these presents had been passed about, the room was filled with a babel of children's voices, talking and laughing in their delight. And it was good to hear.

Until the celebration was over and the children taken away in their covered coach, Mr. Gould and Mrs. Gould remained. Then their carriage drove up, they entered, the footman closed the door with a snap, then sprung to the box, and the sprightly horses danced away with them.

### Esther's Strange Christmas Present.

Continued from page 690.

The policeman felt of the child's hands. They were like cold stone, and he lifted Esther in his arms and carried her away.

At first she struggled against him, but very weakly, her strength being nearly exhausted. Then she lay still in the big man's arms, relaxing herself and resting. Gradually she grew drowsy; it seemed so good to rest and be warm. She seemed to be floating along as she had seen a feather float through the summer air; and when she began to feel like that, Esther was asleep.

She awoke in the morning feeling the presence of a calamity without remembering precisely what it was—like a wound that is still sore. But when Esther opened her eyes to the strange room about her she began crying softly, for it came back to her then that the baby had gone and the forlorn sense of loss mingled with her fear in the unknown surroundings were more than she could bear. I can imagine the little face buried in the white pillow of the police matron's bed and the yellow hair tumbled in heaps above the covers. I can imagine the child's feeling of desolation and despair as her body shook with sobs. While Esther lay crying in the chamber of the police matron's quarters, in the room outside a policeman had entered bearing in his arms a baby wrapped in an old

### A Christmas Eve

(Soliloquy of a boy of seven years.)

8 P. M.

THAT new boy in Miss Slater's room.  
He says—and I believe him—  
There isn't any Santa Claus!  
He's ten; you can't deceive him.  
He came from Boston, and he says  
Such fiction's truly shocking:  
I don't quite know what that means, but  
I'll not hang up my stocking!

9 P. M.

Somehow I can't get fast asleep!  
I s'pose 'cause I'm excited.  
How pa did laugh when I came up!  
Ma didn't seem delighted.  
They're down stairs yet. I hear pa's voice.  
And ma, I hear her rocking—  
I wonder can they hear us if  
I go hang up my stocking.

10 P. M.

I wish there was a Santa Claus!  
I like the old way better.  
I used to write him what to bring  
And pa would take the letter.  
Hark! I hear sleigh-bells, don't I? And—  
Can that be Santa knocking?  
He doesn't knock—but just for fun  
I will hang up my stocking.

EDWARD W. BARNARD

coat that seemed to have on it the stains of salt water, for this coat was one which belonged to Paddy Ryan.

"I got another one here for you, Mrs. Moore," said the policeman; and Mrs. Moore, police matron, answered, "All right; that's what I'm here for. I've a little girl inside."

The woman took the baby, which still slept, and carried it in her arms into the room where Esther lay. There was another bed at the side of this one, and when the matron laid the baby on it Esther opened her eyes and saw.

And this was Christmas morning, but the two children did not think of that until afterward when they were sitting warmly together in the police matron's room. Esther was eating a hot breakfast that the kind woman in glasses had provided, and the baby, lying on the sister's arm, was contentedly pulling at a bottle—a different kind of bottle from that of Paddy Ryan. Suddenly Esther dropped her fork and hugged the baby with both arms so vigorously that the little one choked.

"Why, Lillie," said Esther, laughing, "this is Christmas, and you are a little Christmas present!"

Soon afterward the two children were taken home, for the father and mother had been at the police-station in the night making anxious inquiries, the father's eyes rounder and wilder than ever, the mother voluble and weeping. And the two little sisters never knew how much that father and mother loved them until they reached their home that Christmas Day.

# A GOLD MINE IN AFRICA

BY G. A. HENTY

IT WAS toward the end of the year 1851 that I started with a friend from Tangier on a journey into the interior. I had heard three months before, from a Jew in that town, that he had heard rumors of rich gold at a considerable distance from the coast, and he gave me various particulars that he had at one time or another gathered from the Arabs. My income was sufficient for my actual wants, but it struck me that if the Jew's story was true it might lead to a considerable improvement in my fortunes. Before the Jew gave me all the information in his power, I gave him a paper guaranteeing him a fifth of any share of anything that might result from it. When I went back to England I spoke to several persons whom I thought likely to take up such a matter, but all laughed in my face at my proposal to invest money in so extremely doubtful an enterprise.

I had given up all hope of anything coming of it, when one evening in the smoking-room of my club I met Harry Larkins, an old school-fellow, whom I had not met for some years. After chatting for some time he asked me if I was doing anything, and I said nothing except that I was engaged in the altogether ineffectual enterprise of getting some capitalist of a speculative disposition to put in a little money to test the truth of a report I had heard from a Jew when I was in Tangier.

"Not exactly the place or the man," he said, with a laugh, "that would serve as a guarantee of the truth of the story."

"Well, I admit that," I said, "but as I had paid the Jew nothing for his information beyond signing an agreement that I would pay him a fifth of any profit I might make by following the matter up, I did not see what motive he could have had for romancing."

"Now, that really looks as if there might be something serious in it. Do you mind telling me what it is?"

"Certainly not," and I related to him the story as the Jew had told it to me.

"Well, there might be something in it, certainly," he said. "Look here, Philpot," he went on; "I don't know whether you know it, but about six months ago I came into a considerable fortune at the death of my uncle. It is only within the last week that all the business of signing and sealing, and so forth, came to an end, and I have since then been wondering what I should do with myself. Now a trip into Africa at this time of the year offers a good deal of attraction, and this idea of yours gives a motive. I hate traveling about merely for the sake of traveling. Of course, unless the gold is very rich, it would never pay to work it, but if it is, it might be carried on successfully by giving backshish to the various chiefs of the tribesmen on the road. However, it is worth seeing about. I tell you what I will do, old fellow; I will pay the expenses of fitting out an expedition and go to the place. I have been knocking about in the States for two or three years, and can wash a painful of sand or crush stone with any one; so we shan't have to pay a scientific clerk to go with us. I will undertake the expense, and you and I will go halves in the profits if there be any. Mind, I am not enthusiastic about the results; I think it most probable that nothing will come of it, but it will give us an object for plunging into the Dark Continent. Do you agree?"

"My dear fellow," I said, "I should be delighted to take the trip with you, but I shall be more than content with a quarter if anything comes of it."

"Not at all," he said. "We go on my terms or we don't go at all. I have really a large fortune, and if it turns out well I should take a small party out to open the thing up. If it is sand, we might work it ourselves, without difficulty. Of course its value would depend greatly whether there was water at hand, for washing purposes. If so, a party of a dozen men with proper appliances would be sufficient at any rate for a time. If it is rock it would be another matter. A good deal of capital would then be required to get stamps

and engines and transport them to so long a distance from the coast. In that case it would be necessary to get up a company. However, we shall see all about that when we get there. Now, when will you be ready to start? The equipment need not be large. We shall want saddles and bridles, a rifle and two revolvers each. I suppose we could get tents as cheaply out there as we could here, and it would save the bother. We may as well go down into the reading-room and look at the papers and see when the next steamer sails for Tangier."

"You quite take my breath away."

"I want to be off," he said; "the sooner the better. I have been obliged to stay in town, and have been pestered by lawyers, and now it is all over and I can draw a big check at the bank. I want to be off."

A month later I set out with Larkins for Tangier. We met with no end of difficulties there, but money can effect wonders, and we set out with a caravan con-

great suspicion. However, in each case we were allowed to proceed, accompanied often by a party of Bedouins, who journeyed with us to the limit of their chiefs' districts. However, as we paid liberally for such provisions as could be purchased at the few villages that we came upon, situated in oases, no ill-feeling was evinced, and at last we arrived at the spot that the Jew had indicated.

He had, before we left Tangier, constructed a map founded on the reports that he had gathered, and as we found that various hills and oases were marked with fair correctness to within a few miles of their actual position, we had no doubt that the spot at which we had arrived was the place indicated. It was a valley running into the heart of a mountainous district. Here we met our man, who told us that he had been unable to find any sheik who claimed absolute power in that mountainous district. We had, indeed, passed no villages during the day's journey, or any signs of habitation or culture.

"This is a nuisance," Larkins said.

"It is just here that we want most of all to be on good terms with the Bedouins. However, it can't be helped and we must take our chance." A little stream ran down the valley. We ascended this until the valley narrowed, and then encamped. While the men were pitching our tent, Larkins took a round bowl from the equipment of one of the camels, and a shovel, and we walked down to the stream. This was now a mere trickle of water, but it was evident by the surroundings that in the wet season it was a broad stream. Going down nearly to the edge of the water, Larkins threw a shovelful of sand into the bowl and then proceeded to wash it with great care.

"The Jew has not lied," he said, as after getting rid of all the sand he scanned what remained at the bottom. "Those little particles that you see," he said, "are gold. I hardly expected to see any on the surface, but if, as is certain, they increase as we dig deeper, we have found a bonanza."

He then set to work vigorously, and presently made a hole some four feet in depth and brought up and washed another bowlful. "There is a quarter of an ounce at least," he said, exultantly. "My dear fellow, this is equal to anything that I have seen in California. What it will be at the bottom, goodness only knows."

The next morning we set out on foot to a point higher up, where the mountain narrowed in until the slopes approached to within fifty feet of each other. After trying a few more bowls of sand near the surface, we both set to work to dig a hole of some depth. Two of our escort had come with us, carrying buckets, and when we got to a point too low to throw out the sand they lowered the buckets to us, which we filled, occasionally stopping in our work to wash out a bowlful. Each bowlful showed a larger amount of gold.

"By Jove!" Larkins said; "by the time we get down to the bedrock there is no saying how rich we shall find it."

For four days we labored hard. The sand had now given way to pebbles, and among these we found as many fine nuggets, but the work became increasingly difficult as we got deeper. We were obliged to enlarge the hole, owing to the sand drifting down into it.

"I wish to goodness we had brought a couple of camel-loads of boards, so as to be able to line the shaft," Larkins said, as, fatigued with our day's work, we lay on the sand in our tent. "However, we have already done enough to show us that the place is fabulously rich; the only question is, shall we be able to stir the Bedouins? It was all very well for them to allow two travelers to pass, but when they find out what we are doing it will be a different thing. Still, as we shall be able to pay them a sum for blackmail which they will consider enormous, I hope that we shall be able to manage it."

He had scarcely spoken when there was a loud hubbub among the men. We ran out, and saw a party of nearly a hundred Bedouins riding up the valley.

"Shall we fight?" I asked.

"Impossible," Larkins said, quietly. "I doubt whether our fellows would fight against such odds, and if they did they would be overpowered in a minute." He ordered the men to lay down their guns and to assume a peaceful aspect. When they rode up, a man who was evidently their chief demanded who we were and what we were doing in his territory. We replied, through the dragoman, that we had sent forward a man to find him and to pay him for permission to dig in his country, and that we were perfectly ready to pay him any reasonable sum. In reply he gave an order, and his men at once

"SHALL WE FIGHT?" I ASKED.

sisting of four camels, laden with provisions, and twelve wild-looking horsemen, armed literally to the teeth with guns and a fine assortment of pistols and yataghans, ourselves, and a dragoman to interpret for us. A horseman had preceded us by three days. His duty was to square the petty chiefs of the tribesmen through whose country we should go. We calculated that we should be absent about two months, and Larkins seriously ordered a special Christmas dinner to be prepared for us on our return. Our journeys averaged twenty-five miles a day, so that, if everything went well, it would be accomplished in three weeks' time. That would give us over a fortnight to explore, which, with three weeks to return, would bring us to within a day or two of Christmas.

The first ten days were uneventful. We were met every two days or so by a sheik, whom we paid the blackmail that had been agreed upon for a passage through his district. In return he presented us with a small flag which we were to show to any parties that we met, as a proof that he had taken us under his protection. We had fallen in with several such parties, who had scowlingly deferred to the flag, but had ridden off well satisfied with a small present. As we got on, however, the Arabs became more and more inquisitive as to our object in traversing their country. Our man had duly informed them that we were merely travelers interested in their country and desirous of exploring it, but the chiefs evidently considered this as an altogether insufficient reason, and when they came to receive our tribute, asked many questions, saying that they considered the motive to be ridiculously insufficient, and that our journey was regarded with

\* This story is the last, and also one of the best, from the pen of Mr. Henty, who died at Weymouth, England, last month. Mr. Henty was the world's foremost writer of tales of adventure for boys.

fell upon us and bound us hand and foot. Then we were thrown down by the side of our tent, and the stores brought by the camels were examined. Soon afterwards we heard several guns fired, and felt sure that they were murdering our escort.

"We are in a bad scrape, Philpot," Larkins said, quietly. "This is evidently an exceptionally truculent old black-guard. Well, they have got the arms of these poor fellows, and they have got our stores. I hope that that will satisfy them. If they have spared our dragoman, as most likely they have done, to let him interpret to us, of course he will take them to the pit. That will teach him nothing, for we have always put the nuggets in our pockets, so as not to let our escort see them. We did it not to tempt the men, for had they learned that we were getting gold, they were quite capable of cutting our throats—the temptation would have been too great for them."

In an hour the chief came up with the dragoman.

"Why have you come here?" the chief asked. "And what were you digging in the earth for?"

"We had thought from what we heard that gold was to be found here, but, as you can see by going down into the hole we made, there is nothing but the stones of the river."

The chief at once ordered us to be searched, but nothing was found on us, for we had every night buried all the gold that we had found under the sand in our tent.

"You are my prisoners," the chief said, when the search was found to be fruitless, "and you will have to pay a ransom. You have come into my territory without permission, you have disturbed the earth, and you must pay for it."

"What ransom do you demand?"

"Fifty good muskets, five camel-loads of cloth, two barrels of powder, and five thousand bullets."

"It is too much," Larkins said, decidedly; "but if you will be content with fifty muskets, three camel-loads of goods, two barrels of powder, and two thousand bullets, I will see what I can do. You must remember that a tribute will have to be paid to all the chiefs between this and Tangiers, and that will amount at least to half the sum that these goods that you will require will cost."

"I will accept that," the chief said, and in spite of his rigidity of feature I was satisfied that he was well content. "They must be here in two moons; if they do not arrive by that time, you will be shot."

"You must loose my arms to enable me to write. I suppose our dragoman will take down the message to our consul at Tangiers?"

Our bonds were loosed, and Larkins wrote to the consul, whose acquaintance we had made, and who had assisted us in engaging the men and getting the stores that we required. It said: "We are prisoners in the hands of the Bedouins, and the following is a list of the articles that they require for our ransom. There are five hundred pounds standing to my account in your hands. Please get, without delay, the articles above named, and furnish my dragoman with means to get an escort and to pay the various chiefs the blackmail they require for allowing him to pass. Select the goods carefully, lest when they arrive the Bedouin should consider them to be insufficient. Please make no delay in carrying out these instructions, for our

### THE CHRISTMAS DREAM.

'T WAS the night before Christmas (I've heard that before, But it really don't matter, we'll use it once more), And mamma had tucked me up wagnly in bed And the moonlight was white, and the firelight was red. I'd hung up my stockings, the hole-y and new, And borrowed a pair of my dear mamma's too, And had left by the front door an armful of hay, Where Santa was certain to stop in his sleigh.

I WAS watching the pale little moonbeams get lost And melting away in the firelight like frost, When right on the hearth in their silvery sheen Sat a round, rosy man, in a great coat of green. I wish I could draw him the way that he sat, His blue eyes a-twinkle in cushions of fat, His bushy white beard, and his flowing white hair, And his figure so rotund it filled up the chair.

HIS cap was of fur from the far polar seas, And his pipe was so long it reached down to his knees, And the smoke curled about him like halos they paint In azure and gold o'er the head of a saint. He stared in the grate, and he pondered so deep I thought the old fellow had fallen asleep. I guess he was weary with toting his load, And stopped at my papa's to rest on the road.

BUT his face was so kind that I wasn't afraid. "Hello! you are Santa Claus," that's what I said. "I'd like you to show me your new toys that go With whizzy, bright wheels, and machinery, you know." He rose to his feet and he spoke not a word, Not once from his lips was a syllable heard, But his gestures were merry, his manner was mild, And I thought it was sunshine whenever he smiled.

THAT smile was so jolly it made me smile back, As a glittering soldier jumped out of his pack, A regular jim-dandy, all ready for strife, Who drilled and saluted as natural as life. Then a pair of twin dolls round the room took a walk In sashes and spangles, and oh! they could talk. "Merry Christmas," they cried, in a way most polite, And howed to me gayly and wished me good night.

NEXT a train and an engine went puffing about And stopped at the stations to let people out. And I cannot remember one-half of the things That followed on rollers and pulleys and wings, That hopped, skipped and flew, and went out and went in, Of wood and of rubber, of steel and of tin, From the wax lady dressed in a mantle of silk, To a goat that could bleat, and a cow you could milk.

HE showed me a picture of Christmas-land; drums Grow wild on the branches like peaches and plums, And sleds on the bushes, and kites on the shelf, And you've nothing to do but go pick them yourself. The snow, when it falls in that beautiful land, Is not freezingly hard and so cold to your hand, But like pinkest and whitest and sweetest pop-corn, And it's Christmas whenever you wake every morn.

HE picked up my slate and my pencil at last And laughed to himself as he wrote very fast: "Little girls, little boys, love your fathers and mothers, Your cousins and playmates, your sisters and brothers, And you may be sure I will love you, and never Forget to fill up all your stockings forever." And then like a flash he had vanished away By the door or the chimney, I never could say.

MAMMA says that I dreamed it, the good saint of toys Is a great deal too busy to bother with boys. But I was awake, wide awake, through it all, And heard every time the clock struck in the hall, And my eyes never closed, not a minute, you see, Till I counted the chimes, and 'twas half after three, And I know it was Santa Claus, too, by his looks. Because I have seen him so often in books. MINNA IRVING.

position here will not be pleasant until they arrive."

This note was handed to the dragoman with instructions that he was to ride with all speed, and to urge upon the consul the need for his purchasing and sending off the goods demanded. The man at once mounted and rode off. "I should avoid the places at which we stopped, as the chief might demand more money for allowing me to pass. In seven days I shall be at Tangiers, and in two more days will start, and in another fifteen days you will see me here."

We prisoners were allowed a certain amount of freedom, and were permitted to occupy our tent and to move about unmolested. A week later the camp was broken up, and the greater portion of the troop scattered, and we traveled with the chief and ten of his followers. They went to an oasis fifty miles away, and spent their time quietly there; two men with muskets were always on guard, but otherwise we were allowed to move about freely.

"It has not been a bad adventure," Larkins said. "We have certainly discovered a magnificent gold mine, the cost of our ransom cannot be above a hundred pounds, and we have had an exciting time of it. Before we go I shall try to get the chief to agree to fair terms for allowing us to work the mine, and in any case I shall consider the sum our expedition has cost to be well laid out. I grant a diet of dates and milk is a little monotonous; still, we are both in splendid health. Altogether, in spite of this little diversion, I shall regard our expedition as a successful one, though I doubt whether we shall be able to get up a company on the strength of it."

On the twenty-fifth day after the messenger had started, the chief, with ten followers and us captives, returned to the valley. Two days later some dark figures were seen in the distance. The Bedouins rode out to meet them, and presently returned with the dragoman and the escort, with eight loaded camels. When they were unloaded the chief examined their burdens carefully. The cloths he fingered carefully, and passed the muskets after a short examination. Then he turned to his prisoners.

"Everything is good," he said, "and I am well satisfied. You are at liberty to depart."

"Good," Larkins said, "and the agreement that you have given me, that I shall have full permission to return here with a large party to dig the earth in this valley and erect all necessary work, is to hold good?"

"It is," the chief said. "I have given my word, and on the terms agreed upon, namely, a tribute of fifty muskets a year with ammunition and five camel-loads of robes and blankets, you shall be free to do what you choose in this valley."

Five minutes later we two friends mounted our horses and galloped off.

"We shall eat our Christmas dinner at Tangiers yet," said Larkins. "The horses are fresh and we shall do the distance in six days, which will take us in on Christmas eve."

It was indeed early on Christmas morning when we arrived at Tangiers, and never did men more thoroughly enjoy a Christmas dinner than we did in the company of the consul and three other friends. Larkins is still engaged in endeavoring to get a group of financiers to put up capital for the mine in Africa, and has good hopes that he will eventually succeed.

# The Doll Hospital and Its Secrets

By Tom Thorne

AT THE dolls hospital the sorrows of childhood are mended. Upon each mimic infant that is presented there for healing has been lavished the first expression of the strongest human feeling—maternal love. The child's fondness for her doll is the embryo of the mother's wonderful and powerful love of her offspring. So that each broken leg or dislocated shoulder or lost eye which is replaced or repaired by the doll surgeon tells of a pang of sorrow of some child—a fleeting thing, to be sure, but a feeling that is tremendously important while it lives. So the doll hospital represents pain just as the human hospital does. While the maimed toys each chronicle a serious incident in the life of a child, some of them tell much more. One day the doll doctor received an express package and a letter from a man in North Carolina. The package contained an old and battered doll. The paint had been scraped from its nose and cheeks. One eye was out. A leg was broken; the head and shoulders were severed from the body; and sawdust, which is the doll's "blood," was escaping.

The letter was very short and business-like. "I wish," it said, "that in repairing this doll you would preserve with as little change as possible the face. We wish to keep the doll on account of its associations." Back of this man's letter and his act of sending a child's toy to be repaired was hidden a deep and tender sorrow. He was anxious that the broken, ludicrous plaything should remain just as it had been when his little child had loved it and played with it. To make a change in the laughable face of the doll which his little girl had caressed—even that was a desecration. "We," he wrote, "want to keep it on account of its associations." Then he was not alone in his mourning, for the mother suffered too.

So the doll surgeon has a double office—to heal the sorrows of the children, and to soothe and comfort the grief of the fathers and mothers. And he goes about it in a very practical way. He has all sizes, shapes, and complexions of dolls' heads; a great heap of eyes that can be substituted for those which are lost, and numerous odd legs and arms that are used to replace those which are broken or missing. Then, with thread-and-needle and paste and glue, and half a dozen young women, just before Christmas, when times are liveliest in the doll institution, the mending of the whole body is skillfully effected. It often costs much more to repair a broken doll than to buy a new one of the same sort. Never mind that. A doll once adopted by the little mother acquires an individuality which is never lost, and the matter of the cost of mending becomes a secondary consideration.

Every large city has its doll hospital. In New York there are several of them. The doll surgeons do not confine themselves merely to the repairing of the toys. They manufacture dolls for special purposes or occasions, and they sell them, besides, by the wholesale and retail. The manufacture and sale of dolls is one of the great industries of the world; and it is an industry that will probably last as long as there are little girls in the world.

It was Helen's birthday and she was four years old. Her round cheeks were pink, her eyes shone with an unusual light, because she was never so thoroughly excited before. Helen is a woman grown now and she has known the greatest sorrows and the greatest joys that come into life, but I doubt if in her years of maturity there has ever been such a day of blind ecstasy as the day when she was four. She sat at the head of the table, and as was her due on this occasion, all the family paid her great respect. When she spoke, father and mother raised their forefingers and said, "Sh!" and the other children were all silent while the little girl who was four was heard. And when she saw that every one was listening she was awed and frightened by the silence, so she would lean over to her mother and pull that dear head down and whisper something in the ear that always understood, and as she whispered, little Helen would peep at the others slyly out of the corners of her eyes. Mother would be deeply interested and apparently greatly impressed by what had been said, and she would repeat it aloud to father, and then father and mother, with a look of understanding in their eyes, would nod at each other very gravely indeed. The little girl of four would observe this. She would stiffen her little body and be very proud, realizing what a superior thing it was, after all, to be four years old.

But the queen of the day couldn't eat. Excitement drove away her appetite, although there was a great tender turkey in her honor and a beautiful cake all covered with white frosting and marked with letters made of little red candies and spelling the word "Helen."

"That's all my cake, isn't it, mamma?" Helen would say, to reassure herself.

"Yes, dear," her mother replied, "but I know you are going to give some to your brothers and sisters, aren't you?"

"Yes'm."

Then came the overwhelming event of the day. Already the little girl who was four had received a dozen gifts, but after the dinner was over and before she had

climbed down from her chair, father, looking so very important, showing such intense suppressed feeling that every one watched every motion that he made, cleared his throat for action. Then he reached down beside his chair and took in his hand a large white pasteboard box.

"Helen," he said, while you could have heard a pin fall, "Helen, you have been a very good little girl. Here is your reward. Come and get it."

The baby was startled by the formality and solemnity of the moment. She glanced at her mother.

"Go and see what it is, dear," said mother very tenderly, and thus reassured, the little girl climbed out of her chair and walked shyly toward her father. She was quite frightened as she stood there, her head tilted forward a little and toward one side, so that her fine brown hair fell over her face. Father removed the lid of the box and lifted from it a gorgeous being with golden tresses, with beautifully tinted cheeks, eyes that were round and bold and blue, arms that swung stiffly from the shoulders, a great picture hat on its head.

"A doll!" exclaimed one of Helen's brothers. "My, ain't she a big un!"

But the little girl who was four did not move; she was transfixed—stunned by what she saw. She looked at the

THE DOLL SURGEON AT WORK IN HIS HOSPITAL.—Luckey.

great doll a minute fixedly, in mute wonder. Then suddenly, and without a word, she walked up to it and put her little arms around the gorgeous thing, and then turned and walked silently away, the doll in her arms.

We are pleased to say sometimes that childhood happily knows little depth of feeling, but I believe there was never a grander moment of triumph in Helen's whole life than that.

And after that day the child had a new responsibility. Foremost in her mind was the safety and welfare of Arabella, the great, beautiful, blond doll. Every afternoon Arabella must have a ride in her baby carriage from the dining-room out into the hall and back again. And the little mother always placed soft pillows behind Arabella's back so that she would sit more comfortably. And every afternoon the beautiful Arabella was laid in her cradle by her tender little mother of four. And it seemed that the doll actually slept. For no sooner did her head touch the pillow than there was a click and the blue eyes rolled

and then showed white, and Arabella lay calmly slumbering in her chiseled beauty. And, as the eyes of other beauties have done before and since, the eyes of Arabella caused all the trouble which I am going to tell about, and which makes a very stormy chapter in the life of little Helen.

And here I will introduce a young gentleman named Bobby, aged six, brother of Helen, a boy whose hands were always chapped in season, a youth whose pockets bulged with marbles, nails, and smooth stones, and in whose personality there was a certain trait which prompted him never to take anything for granted, but to investigate that which he did not understand. It was Bobby who had climbed to the clock shell, and in the mechanical study which followed had put the clock in such a sad condition that it never struck the hours again. It was Bobby who had cut the back out of his little music-box and discovered the prickly revolving cylinder within.

While Arabella slept, so did her little mother, but Bobby was awake. To Helen and to Bobby, Arabella was a different being. To the little girl she was a "baby" to be loved, caressed, and cared for; to the little boy she was a mere "doll," an object of contempt; but as Bobby gazed on the sleeping Arabella he wondered.

"I wish I knew," he said to himself, "what makes her eyes shut." The instinct of investigation was strong within him. Oh, Bobby, if you had only resisted the tempter, what a tempest you would have averted! But Bobby didn't. The doll was lifted from her bed while little Helen, unconscious, slept. The disturbed Arabella was taken stealthily out of the house and back behind a row of currant bushes.

Her eyes were wide open now. With brutal fingers Bobby touched the beautiful blue orbs. He touched them very softly at first, being almost afraid (although he was a boy and took no stock in dolls) that he might injure the unfortunate Arabella. Then he pressed the eyes a little, very cautiously. He made them open and shut rapidly, but still he did not understand. Then there arose within the boy a powerful desire to look into the head of Arabella. If he could only see inside, he thought, the mystery would be solved. His fingers wandered through the beautiful yellow hair, feeling all parts of her scalp. Lo! It was loose in one small spot at the back of her head. Bobby's small fingers slowly lifted the scalp, breaking the glue which held it, until finally it was nearly free; and then with one more thrust of his finger Bobby had pulled the scalp entirely off! And Arabella, divested of her beauty and her glorious hair, bald as an egg, sat before him.

Bobby was frightened at his success. He glanced at the bald skull. In the top of it was a great round hole and the boy looked into the hollow interior of Arabella's head. Arabella did not scream or cry when the emptiness of her life was thus exposed. She sat still as before, looking straight forward with her great, round, and beautiful blue eyes. There remained unchanged in her cheeks that ruddy flush. But she was not beautiful now, and, although Bobby did not analyze his feelings and impressions just then, he realized that superficial adornments often enhance to an astonishing degree the beauty of Arabella's sex. After his first surprise there stole upon Bobby a creepy sensation, a sense of fear and horror. Slowly there came upon him the feeling of the criminal. He looked at the bald Arabella. He took her into his hand and gazed into that awful hole in her head. Although he was now thoroughly excited and even breathless he saw that the eyes were made to open and shut by a little lead weight which balanced the two eye-balls. He put his finger inside quickly to feel of it. Then he discovered that by touching the little lead weight he could close Arabella's eyes even while she sat erect. It was very interesting.

Bobby tried it several times until suddenly and before he knew what had happened something broke—and Arabella's eyes fell out of their sockets! And when Bobby looked at that bald head and the face with its gaping sockets he shuddered. He felt as one who had committed murder must feel. He glanced over his shoulder, his eyes big, his breath coming fast. Then he tossed Arabella, scalp, eyes, and all, into the currant bushes and ran for his life.

Little Helen had awakened. She had missed her great baby and there was pandemonium in the house. Then Bobby, his guilt heavy upon him, entered, trying all the while to appear innocent and unconcerned. To his surprise and horror his mother asked him immediately:

"Bobby, what did you do with Helen's doll?"

"I dunno," said Bobby, dropping his eyes and hanging his head.

It is sad to think of what happened next to this Bobby. He cried a good deal and tried to pull away from his mother, but I have no doubt the physical medicine which she gave him made a better boy of Bobby. And just then, Prince, the great, lank, Newfoundland puppy, who tore the holes in the children's stockings,

loped up with Arabella in his mouth, and when little Helen saw the bald head and vacant sockets she screamed with grief, for she thought that her doll was dead. Bobby, stunned by the ruin he had wrought, confessed all and the scalp and the beautiful blue eyes were found in the currant bushes. When father came home at night he was told what had happened. And it was he who spoke of the doll hospital and who carried the blemished Arabella away next morning.

"She is not dead," the mother assured the grief-stricken Helen, "but she is a very sick child. When she comes home she will be all well."

And so she was. Father brought up the package at night. And when the paper was removed, there lay Arabella on the floor as glorious as the day Helen first knew her. She lifted the great doll in her arms. The eyes opened with a click. They were as big and blue and beautiful as ever. The little girl laughed and hugged the big doll hard.

But Bobby, who had been disgraced, for two days said nothing. He stood and looked on with sorrow and self-pity in his heart. And then his little sister placed Arabella carefully against the leg of a chair, and with her face glowing with tenderness and love the little girl walked over to her brother and laid a little hand softly on his shoulder.

"Bobby," she said, "I'm sorry. Ar'bella wasn't hurted very much, after all."

This is a little story about one of the biggest dolls that was ever made, but before I tell it, you should know about a little child who came into a home one day and for ten years made it a spot which the mother loved; and a place which, long before his busy day was over, the father looked forward to as a haven of gentleness and love and peace, where he found sympathy and devotion and a confidence that knew no doubt or question. And when his little girl had climbed up into his lap and put her soft face against his face and had tucked herself comfortably in his arms, her head in the hollow of his shoulder, he was soothed and calmed and comforted, and he was happy to discover that the problems, the worries, the ugly conflicts of the day, that had so harrowed and disturbed him were melting away under the gentle influence of that little child of his who lay so warm within his arms.

The sunniest room in the house was little Ruth's playroom. In two boxes in a corner beside her little "crib" she stored her wonderful playthings. Each morning she unpacked her two boxes and prepared her games. She had a set of blocks of various shapes and lengths and sizes, and she laid these on the floor, making the outlines, the ground floor plan, as it were, of her doll's house. Here was her "parlor," here her "dining-room," here her "bed-room"; and while she arranged her house her five dolls sat rigidly in a row, their backs against the wall, watching her, I have no doubt, with great interest and concern. There was the beautiful Marie, who had golden

curls and eyes the color of the sky after an April shower; and there was Jennie, whose hair wasn't "really hair at all" (as Ruth sometimes explained) but was only painted on her shiny, china head; and there was Betsy, the old rag doll, whose features could no longer be clearly distinguished; and there was Tom, the india-rubber doll, who whistled when you squeezed him; and on the end of the line against the wall sat Sambo, the "nigger" doll, who had to walk on stubs of legs because his China feet were broken long ago.

Each room in Ruth's doll house had its own furniture. And as each bit of this baby home was put in place the little mother of it, sitting on the floor in her checkered apron, would carefully dust chairs and table, as she had seen her own mother do; and would talk all the time in an undertone to her gallery of rigid dolls as her own mother talked to her.

And over by the window in her rocking chair the real mother was sitting and watching, with a love look in her eyes, the little figure in the checkered apron that was playing so busily and earnestly on the floor. And as the months passed by and the little one had grown from babyhood to childhood, and from childhood to girlhood her life became more and more a part of the mother's; there were no other children in the family, and these two were much together in a growing and loving companionship.

I wish I could say that the years went on and the daughter became a beautiful woman, and that as the mother's hair turned gray the relation of the two gradually became reversed and the mother came to lean on the strength of the daughter for help and care and sympathy—became in her turn the little child. But into this story (or the story would not be) must come those days of fear and anxiety, when the curtains are drawn down, the doctor's buggy is at the door, and a little girl of ten is lying in the same little bed never to rise again. And I must tell of the days when the mother's heart was lead, and the father grew pale with an awful dread, and the wife put her arms around her husband's neck, buried her face on his shoulder and wept. And I must tell of the days of anguish, the days when there was a hush in the little house. If only these days could be left out of every life!

And after that—utter desolation. But even in her most fearful test of the human fibre, Nature is kind. To the mother of the little one who had played so happily in her little checkered apron on the floor Nature pointed a way. The man who told me the story laughed about it, but a sadder, more pathetic thing I think I have never heard. And now I have come to the part of the story in which the great big doll appears.

On a busy street in the big city is the man who manufactures dolls. And one morning he received a most peculiar order from one who even then exercised all his self-control to be calm when he spoke. He wanted a doll as large, he said, as a little girl of ten years old. And he brought a little checkered apron to the doll factory for a guide to the manufacturer. He had a photo-

graph, too, of a little girl who had stood very bashfully before the camera with a big, stiff bow of ribbon in her hair. And the man who paints the lips and cheeks and eyebrows of all the dolls took the photograph and copied, as nearly as he could, the features of little Ruth who had died. It was the biggest doll he had ever made, and when it was finished, with brown hair like that of little Ruth, the same big eyes, the same little mouth, it was carried home to that mother who sat in her rocking chair by the window waiting, and in the corner of the room was the little house laid out with blocks like a ground plan and the five little rigid spectators were sitting against the wall—the beautiful Marie, Jennie with the shining china head, Betsy, the rag doll, whistling Jim, and Sambo the "nigger" doll, a little apart from the others and leaning toward one side—just as they had been left when their little mother was taken to her bed.

When the father came from the doll factory into the quiet house he carried the great doll and laid it in the empty arms of the mother. She arrayed it in the shoes, the stockings, the dress, all the garments of little Ruth, and then held it to her breast just as she had held her little daughter in the days gone by. And the mother tenderness flowed again, folding itself about this wonderful doll, and the yearning of the mother's breast, the emptiness of the arms, that was more than mental suffering, that was an actual and physical pain, were dispelled. Every morning the great doll was dressed in the little checkered apron by that broken mother, and every afternoon it wore the dresses of little Ruth with the stiff ribbon in the hair, and at night it was tucked away in the little crib. So the deadly ache in the mother's heart was soothed and the torn and tender tendrils of a mother's love found a new clinging place, and I am glad that the doll maker could make a doll as big as a girl of ten.

A WIRELESS CHRISTMAS GREETING IN MID-OCEAN.

A TWENTIETH-CENTURY DISCOVERY BRINGS TO THE BELLE OF THE SHIP A LOVING MESSAGE FROM FAR-DEPART FRIENDS.  
*Drawn for Leslie's Weekly by Eliot Keen.*

### Historic Christmas-tides.

WHILE NO event comparable with the event of all events in the history of the world which is commemorated by all Christendom on December 25th has ever taken place on or about that day, it has nevertheless marked the occurrence of not a few noteworthy deeds and other happenings in the annals of our race. Some of these things have been of that happy and propitious character in keeping with the spirit of the time itself, and others have been quite the reverse of this. Among what may be regarded as joyous events taking place on Christmas Day, or thereabouts, may be included the coronation of William the Conqueror, which took place on December 25th, 1066. In the same category we would place the landing of the Pilgrims, which occurred only

four days before Christmas in 1620. The same happy season, in 1841, witnessed the ratification of the Quintuple Alliance for suppressing the slave trade.

But, strange to say, occurrences of a sad and tragical nature seem to have been more common on Christmas than any other notable events. During the fourteenth century there were three dramatic Christmases. In 1348 the Black Death was raging. In 1384 the persecution of Wycliffe was rapidly bringing on that paralytic stroke by which he died on December 31st. Saddest, perhaps, of all was the Christmas spent by Isabelle, Dowager Queen of Edward II., in Castle Rising, where she remained a prisoner for the next twenty-seven years of her life.

For the Stuarts of England Christmas sometimes breathed tragedy. Mary, Queen of Scots, was born on December 8th. Eight days later she was hurried off to

France, immediately after the death of her father, James V., on the 13th. During December, 1644, Montrose opened his fruitless campaign in Scotland; on December 23d, 1648, Charles I. made his last mournful journey under escort to Windsor, and in 1650, on Christmas Eve, Edinburgh surrendered to Cromwell. On December 22d, 1688, James II. escaped to France, leaving Judge Jeffreys to flee for safety to the Tower, and on December 28th, 1694, Mary Stuart, wife of William, died, comparatively young. On December 22d, 1715, the old Pretender landed at Peterhead, and, curiously, in 1745, it was during December that the campaign opened in Cumberland.

INCREASE your strength, ward off ill health, use Abbott's, the original Angostura Bitters, the strength giver.

# The Response of The Oracle

A Christmas Story

by Roselle Mercier

I CALL HER The Oracle because she always gives ambiguous answers to a certain question that I have fallen into the habit of asking her as often as she will allow. This sounds tame, but I have tried other tactics with The Oracle and have found them unsuccessful. I have also found that I would rather be unsuccessful with her than successful with any other girl. This The Oracle knows—and she uses the knowledge to her own advantage.

I found her writing busily at her desk when I dropped in yesterday afternoon on my way up town.

"Good-afternoon, Tom," she said without rising. "What rhymes with stocking?"

"Shocking," I answered very properly.

"Why, yes—so it does. That will do nicely. Just wait; I'll be through in a moment." And The Oracle went on writing.

I sat contemplating the back of her head—not a bad occupation when the head is delicately poised, when there is a pretty, pink little ear, and beneath it a delightful bit of soft white neck fringed with clinging little curls—as in the case of The Oracle.

"There! that was the last," said The Oracle presently. As she laid down her pen and turned toward me, I reflected that a front view is more satisfactory, after all.

"At your Christmas verses?" I asked.

The Oracle nodded. It is a pretty custom of hers to individualize each gift she sends by scribbling a little original verse on the accompanying card.

"Do you remember that you favored me with a verse last year?"

"Did I?"

"Yes. It shone among the conventional 'Merry Christmases' and 'Season's Greetings' like a good deed in this naughty world."

"I'm glad you liked it," said The Oracle, demurely.

"I didn't say I liked it," I replied.

"You're very rude. Why didn't you like it?"

"Can't you guess?" I asked, looking straight into her eyes.

"I forget now what the verse was about," she answered, turning her eyes away.

The Oracle always forgets. It is her trump card; and when she plays it, I am driven to other tactics.

"Perhaps this will refresh your memory," I remarked as I took from my card-case one of her own cards with a lot of fine writing on it.

The Oracle is only human. She could not help looking pleased that I should have it with me, but she made no comment.

"Possibly you may be able to recall that you sent it with a picture frame?" I ventured, politely. "Shall I read it to you?"

"If you like."

"Well, here goes:

"This little gift to you is sent  
With Christmas cheer—and this intent—  
That here within this frame should rest  
The face of her whom you love best."

"P. S.—

"So reads the rhyme upon my card,  
But won't you find it very hard,  
When you are fond of girls galore,  
To choose the one you most adore?"

"I'm sure I think that's very nice," remarked The Oracle, modestly, when I finished reading it. "I don't see why you didn't like it."

"Shall I explain?"

"Oh, no; never mind," said The Oracle hastily. "Men have their little fancies, I suppose."

I was not going to let an opportunity like that pass. "Yes, they do," I replied. "I've had the same one ever since I met you."

"Then it is quite time you got a new one," answered The Oracle, calmly. As usual, I had reckoned without my hostess.

"Do you know," I said, impressively, "that I have never used that picture frame?"

"What!—you didn't like the frame either?" exclaimed The Oracle in an injured voice.

"Oh, yes, I liked the frame," I answered. "But once upon a time there was a man who had a saddle given him, and he worked himself to death trying to get a horse to use it on. Now I—"

The Oracle smiled. "That was very foolish of the man, when horses are so plentiful and so cheap," she interrupted.

"Oh, yes," I answered, "there were plenty of horses. But, you see, the man wanted a particular horse, and that wasn't

cheap at all. And his heart was so set upon it that, as I said before, he worked himself to death trying to get it."

"Dear me, how unpleasant!" said The Oracle. "Do all of your stories end badly?"

"They wouldn't if the ending depended on me," I said, meaningly.

"Well, it wasn't a nice story, any way," commented The Oracle. "Let's talk about something else."

"Yes, let's," I answered with alacrity. "Let's go back to the picture frame. As I was saying, it is still empty—and all because the only girl whose face shall ever go into it won't give me her picture."

"There are lots of other girls in the world," remarked The Oracle.

"There were lots of other horses, too."

"There! don't ride a willing one to death. I understood your little parable."

"But how about the picture?" I persisted.

"You know, Tom, that I've always said I considered it 'cheap' for a girl to give her picture around to men. A man keeps a girl's picture on his desk or his dressing table for a while—then he meets another girl, and girl number one and her picture straightway become back numbers. I never cared about being a back number."

"But with me you know it wouldn't be like that. You know I'd—"

"Oh, yes, you are different, of course," laughed The Oracle. "Every man thinks himself the exception that proves the rule by which all other men are governed."

I was not in the mood for epigrams. "Well, at any rate," I observed, "you are certainly the exception that proves all the rules by which girls are governed. I never heard of a girl who wasn't willing to give her picture to a fellow who had loved her as long and as devotedly as I—"

"Yes," interrupted The Oracle, "other girls do it. But I've always said that if I cared enough about a man to give him my picture I'd care enough about him to marry him."

"I know. That's the principal reason why I want the picture," I responded, promptly.

When the conversation takes a turn like this The Oracle always changes the subject. "Tom," she said, suddenly, "you've forgotten your manners."

"In what have I offended, O Oracle?"

"You haven't asked me to read you my Christmas verses."

"Will The Oracle be pleased to read now and interpret?" I asked, humbly.

"Oracles never interpret, but I'll read them to you and let you guess for whom they are intended. Shall I begin at the beginning?"

"No; at the end, if you please. I want to hear that last one—the one with the stocking in it."

"Oh, it's mild," laughed The Oracle. "Here it is. I am going to send it with a pair of silk stockings:

"The slightest suggestion of hose  
To some people seems very shocking;  
But I do not suppose  
That you're one of those,  
So I send my best love in a stocking."

"And I'm to guess for whom that is intended?" I asked. The Oracle nodded. "Well, for a first try—your aunt Jane!"

The Oracle dimpled deliciously. "Oh, Tom," she said, "you know Aunt Jane would like people to think that women's shoes are pinned on to their skirts! No; it's for Betty Conyers."

"That's queer!" I exclaimed.

"What's queer?"

"Why, silk stockings to a girl who has to work for her living! I should think you would give her something more useful."

"Tom," said The Oracle, pityingly, "you're positively elementary! Don't you know that people always manage somehow, by hook or by crook, to get for themselves what they are absolutely compelled to have? When they receive presents they like to get things they don't really need and couldn't possibly afford to buy even if they did."

"Oh, wise young judge!" I exclaimed in admiration.

"Well, you see, it's only human nature to long for the unattainable. I always try to remember that."

"I can't compliment you on your success."

"Why not?"

"You seem to forget how many months I've been longing for the unattainable," I said, looking hard at her.

The Oracle, as usual, chose to ignore both the look and the speech. "Now guess who is going to get this," she said, briskly, taking up another card from the desk. "It is going with a belt-pin."

"There are many sad partings in life,  
Through sorrow, through death, and through strife;  
But the sternest and saddest that woman e'er felt  
Is the agonized parting of waistband and belt."

"That ought to be for Kitty Mitchell. She's always missing connection in the back."

"Right!" answered The Oracle. "Now here's one that sounds wicked—it's going with one of those folding silver drinking cups to a man—"

"A man?"

"Yes."

"What man?"

"You have to guess that. Now don't interrupt:

"If of me when you rustinate  
I'd have you often think,  
I'd simply say 'Remember me  
Where'er you take a drink.'"

"Um—I must say I don't care for that," I said, stiffly.

"You don't?" questioned The Oracle, pleasantly.

"I do not!"—emphatically.

"May I ask why?"—still pleasantly.

"It sounds—oh, I don't know—it doesn't sound like you to tell a fellow to remember you every time he takes a drink."

"I knew you'd say that," said The Oracle, even more pleasantly. "I was only waiting until you did to tell you that this particular man doesn't drink anything but water!"

The Oracle absolutely beamed. I did not. She had laid a little trap for me and I had walked into it like the great big blundering bear that I am. Walking into traps does not improve the temper of bears.

"You don't mean to say," I growled, "that you intend it for that young fool Richardson?"

"You call him that because he drinks only water?" inquired The Oracle, sweetly.

"Then it is he?" I persisted.

"Perhaps."

"Well, I don't know what you see in him," I said, disgustedly.

"Oh," answered The Oracle, airily, "he does lovely water-colors and he plays the violin, but what I admire about him most is—"

"What?"

"His good taste. He admires me, you know," answered The Oracle, modestly.

Here was my chance. "If you like him for that, you ought to love me," I said.

"I have done those things I ought not to have done, and I have left undone those things I ought to have done," quoted The Oracle, wickedly. "Now, Tom, you must go. I must dress. I'm going out to dinner."

"Very well, I'll go," I said, rising and holding out my hand. "But 'this Christmas Eve. Can't I have my

"I TOOK THE PACKAGE SHE HELD OUT TO ME, WITHOUT COMMENT."

"IS SANTA CLAUS COMIN' TO OUR HOUSE? WELL, I GUESS!"

HAPPY YOUNGSTER CARRYING HOME A CHRISTMAS-TREE IN TRIUMPH THROUGH THE SNOW-STORM.—Drawn by W. H. Hyatt.

answer to-morrow—for a Christmas present? It would make me happier than anything else in the world!"

"But I've already got your Christmas present!" exclaimed The Oracle. "It's all tied up and stamped, ready to send. It's something you want, too. I've heard you say so, and I've written a charming verse with it."

"That sounds very nice, but, dear Oracle, won't you be serious a moment? I want your answer more than anything in the world! I feel as if I could not live without it very much longer," I said, taking her hands in mine.

"Do you really want it so much?" murmured The Oracle, softly, without drawing her hands away. My heart began to beat.

"You wouldn't ask that if you could only realize how much I love—"

"Mr. Richardson!" announced the maid at the door. I should be truly sorry in these, my calmer moments, to have the young man suffer the fate I wished him just then.

"Must I go?" I whispered, as that individual divested himself of his hat and coat in the hall.

"Yes," answered The Oracle—"but so must he. I've really got to dress."

"And my answer?"

But by this time Richardson was in the room. As he spoke to me I gave his hand such a grip as must seriously have imperiled that member's further usefulness for water-color painting or violin playing. But, everything considered, he got off lightly.

"Oh, by the way, Tom," called The Oracle, as I was leaving the room, "I believe I shall get you to mail that package after all."

I was about to say "What package?" but a glance at The Oracle's face—and past experience—kept me silent. It is always safe in dealing with The Oracle not only to expect the unexpected but to appear to other people to expect it. So I took the package she held out to me, without comment, but wondering inwardly what it meant.

There was a mail-box at the upper corner on the opposite side of the street. I sauntered over, keeping an eye on The Oracle's door. "You must go, but so must he," she had said, yet no Richardson appeared—not that I was looking for him, of course. I was there to mail The Oracle's package. I discovered that the package—a big, thin, square one—was too large to go in the opening. It was really not safe to leave it on the box. I would take it to a parcel box. There was one just two blocks farther down. It also was in plain sight of The Oracle's door. I walked very slowly—but no Richardson appeared.

In the region of my heart I began to feel a queer sensation that I knew was going to be a pain by and by. It was all up with me! She had sent me away that she might see him alone—she preferred him—she had only been playing with me. And her evasiveness had not been simply a young girl's avoidance of a serious love affair, as I had hoped—fool that I was! It had been a deliberate flirtation! All along she had been caring for—

By Jove! there he went. Perhaps, after all—I drew in a deep breath and started up the avenue at a swinging pace. I must know what it all meant. I would not stand the uncertainty any longer.

"I must have my answer at once," I found myself saying in a positive tone to The Oracle as I put my latch-key in my door. As I did so something slipped from my arm and fell to the floor. It was The Oracle's package. I had forgotten all about it! When I saw Richardson come out of The Oracle's door, mail-boxes, packages, and everything else but one thing had passed out of my mind.

Now I picked it up guiltily, and as I did the light from the hall fell upon it so I could not help seeing the name upon it. It was addressed to me!

I gazed for a moment with a deep sense of my own unworthiness—and a deeper sense of The Oracle's wonderfulness. Of course her asking me to mail the package had only been her way of giving me my Christmas gift without Richardson's knowledge—her own quick-witted way of consoling me for having to go. And I—great gawk that I am—had not read her meaning; had almost mailed it; had only by accident stumbled on the thing she meant me to do. No wonder if she did prefer Richardson!

I rushed up to my room two steps at a time, thinking how nearly my stupidity had come to depriving me, for twelve or fourteen hours at least, of The Oracle's Christmas gift. As I tore it open The Oracle's card fell out first. On it was written, in the fine familiar hand:

"An oracle's answer was always obscure,  
So the old classic writers all stated;  
But—an oracle's answer was easy to read  
If you only knew how to translate it."  
P. S.—  
The ancients had always to pray for a clue  
Perhaps the inclosed will give one to you."

I tore open the wrapping in frantic haste. The "inclosed" was The Oracle's picture!

### A Chance for Our Readers To Make Money.

THERE IS scarcely any form of entertainment more agreeable at times to an active mind than the solution of a puzzle. Various ingenious puzzles have been invented that have excited a perfect furor of popular interest. Puzzle pictures are often a pleasing feature in the columns of periodicals of the day. The exercise of solving them offers, especially to the young, much innocent recreation and serves to sharpen the perceptive and other faculties. In this number of LESLIE'S WEEKLY is printed our annual prize combination picture puzzle. It is composed of striking pictures which have appeared in this journal during a recent single year and which are familiar to the regular readers of its columns. Each of the fifty-one illustrations is numbered, but no clue is

given to the date of the issue in which it appeared. The solution of the puzzle consists in naming the date on which each picture was printed and also giving the caption or title of each. This will require careful inspection of the files for a year, but the research should prove most enjoyable to all who undertake it. To the person who first sends to this office a complete and correct list of the dates and the titles or captions of the pictures will be awarded a prize of \$25. The sender of a like list arriving second will be allowed \$15, and to the sender of the third list received will be given \$10. Four other prizes of \$5 each, eight of \$2.50 each, and ten of \$1 each will also be distributed, according to the order in which additional correct lists shall be received. This makes the total of the prize money \$100, and the various sums mentioned should incite thousands of the readers of LESLIE'S WEEKLY to renew their acquaintance with its attractive pages. It is distinctly to be understood that no competitor will be permitted to submit more than one list of the puzzle pictures.

N. B.—All answers must be in before February 15th, 1903, on which date the contest closes.

### Glass of Water

UPSET HER.

PEOPLE that don't know about food should never be allowed to feed persons with weak stomachs.

A little over a year ago a young woman who lives in Mercer, Me., had an attack of scarlet fever, and when convalescent was permitted to eat anything she wanted. Indiscriminate feeding soon put her back in bed with severe stomach trouble and inflammation of the kidneys.

"There I stayed," she says, "three months, with my stomach in such condition that I could take only a few teaspoonfuls of milk or beef juice at a time. Finally Grape-Nuts was brought to my attention and I asked my doctor if I might eat it. He said 'Yes,' and I commenced at once."

"The food did me good from the start and I was soon out of bed and entirely recovered from the stomach trouble. I have gained ten pounds since my recovery and am able to do all household duties, some days sitting down only long enough to eat my meals. I can eat anything that one ought to eat, but I still continue to eat Grape-Nuts at breakfast and supper, and like it better every day."

"Considering that a year ago I could stand only a short time and that a glass of water seemed 'so heavy,' I am fully satisfied that Grape-Nuts has been everything to me and my return to good health is due solely to it."

"I have told several friends having nervous or stomach trouble what Grape-Nuts did for me, and in every case they speak highly of the food." Name given by Postum Co., Battle Creek, Mich.

### OUR \$100 PRIZE CHRISTMAS PICTURE PUZZLE.

FIND CAPTIONS OF THESE ILLUSTRATIONS IN "LESLIE'S WEEKLY" FOR LAST YEAR AND WIN A PRIZE.

# Why Marse Jim Did Laugh So

By Lowell Otus Reese

**U**MP! Ki-yi! Lawd bress mah soul!

Now see heah, Marse Bill! Whaffo' yo' go sploshin' inter de water, skeerin' de fish an' r'illin' de water so's yo' po' ole Unk' Shad kain't kotch his supper? Reckon de ribber ain't made foh nuffin' else but foh young gemmans to go swimmin' in? I's s'prised at yo', Marse Bill, 'deed I is! A young gemman whar been brung up in de big house yander an' licked off to Sunday-school reg'lar foh fo'teen yeahs—

Eh? Wha' dat?

Ef hit ain't a watermillon I's a ghos'!

Huh? Brung hit down foh yo' ole Unk' Shad? Honey—!

Yo's de bes' boy dat libs in all dese bottoms! Yassir! I always said so. He-he! When I see yo' go plunk! inter de water jess now, skeerin' de fish inter fits, I says to mahse'l, says I, "Dat boy sho' gwine tickle de ole man to deff yit!"

Des' come outer de water now, honey, an' we'll kyarve dish yere watermillon an' talk w'iles ole catfish quietin' his nerves. Come erlong, Marse Bill. Wrop yo' coat 'roun' yo' shoulders so you ain't kotch no cold— Jer-mune! Heah de knife go rippin' froo dat green rin! Ebber see de beat ob dat ar' red heah? Yum-m-m-m! Dat watermillon 'ud make de worst man erlive t'ink about heaben an' glory an' dat. Yes, sah.

What dat? Stoled hit f'om Kunnel Granger? Marse Bill!!!

Honey, does yo' know whar yo' gwine ter when yo' die?

But nemmine! Yo's too young to know hit's wicked ter steal watermillons! Dat's er fac'. I's mos' eighty yeahs ole an' I's jess erginnin' ter fin' it out mahse'l!

Stoled hit f'om Kunnel Tom Granger? Er-haw-haw! I 'clar, Marse Bill, yo' 'minds me ob yo' daddy (whar we all called Marse Jim). He de beatenest an' rampagenest chap dat ebber stoled a watermillon or went spahkin'! 'Deed he was.

Hi-yah! I 'bleeds ter laugh 'bout de way yo' skeer de ole nigger when yo' splunge inter de water like an ole mud-turkle! 'Minds me ob dat time when me an' yo' daddy (dat we-all called Marse Jim) skeer dat uppity young Marse Tom Granger s'ly one night w'iles he was spahkin' Marse Jim's bes' gyrl in de big parlor. Ho-ho! An' he ain't know to dis day who 'twas skeer him!

Tell yo' erbout hit?

Er—is yo' nebber gwine gib hit erway? No? Cross yo' heah? Hope ter die?

We-ell, dis am a monst'us fine watermillon. . . . Yo' didn't reely mean to skeer yo' Unk' Shad's ole goggle-eye plumb out de water an' inter de bresh. . . . I's gwine resk hit!

Young Marse Jim lub Miss P'mely Ruggles so hahd he ain't sleep good o' nights. He des' ha'nt de Ruggles place; an', honey, hit's de bones' troof, I's seed dat chile settin' half de night on de sha'p ridge ob a fence-rail watchin' de light in Miss P'mely's winder! Yeus. Des' a-settin' dar on de fence like a gosh-ding ole Billy-owl, an' I mos' feelin' skeer about 'im.

One night I was settin' out in front ob de cabin pickin' mah banjo an' thinkin' 'bout dem spayeh-ribs I done had foh supper, when Marse Jim come sneekin' up froo de dahk. "Shad," sezsee, "less go ober to de Ruggles place an' steal a watermillon!"

Co'se dat soun's fir'st-rate to me, kaze I berry fond ob watermillon dem days. So we sneek ober to de Ruggles place an' he'ped ourselves.

Atter we'd et watermillon 'twel we bofe mos' ready to bus', Marse Jim 'low we go up an' take a look 'roun' de Ruggles house. He done got a notion somebody in de parlor cou'tin' Miss P'mely, an' I see dat hit's worryin' him a whole lot. Now I's berry willin' to go, kaze I's fond ob Marse Jim an' I's sorry foh him too; but same time I's feelin' skeery, kaze I know I kain't run berry fas' wif all dat watermillon. Howsomever, we slipped 'cross de field, crope froo de bresh to de front-yahd fence; an' sho' 'nuff dar's a bright light shinin' ober de top er de blind in de big parlor bay winder!

I heah Marse Jim grit his teef an' cuss. I feelin' mighty sorry foh him, but I's gettin' tar'ble sleepy, 'twixt dat watermillon an' dem spayeh-ribs.

Bimeby hit 'pear dat Marse Jim 'bleeds ter see ober de top ob dat winder blind or die.

"Shad," sezsee, "yo' go 'roun' an' foteh dat ladder whar layin' on de woodpile erhines de house."

"Foh de lub ob Gawd, Marse Jim!" I 'low, "doan' yo' go projekin' 'roun' dish yere house! Hit's wrong, Marse Jim, 'deed hit is! 'Sides dat, Kunnel Ruggles done got an ole shotgun wif a double bar'l as long as one er dese yere fence rails!"

"Nigger," says Marse Jim, "is yo' gwine git dat ladder, or is I gotter squish yo' empty fool haid wif a hoe-handle?"

Marse Jim speakin' low an' sabbage an' I skeer so bad I ain't know whar I's at. "I's gwine, Marse Jim, I's gwine!" says I; so I stahed an' crope 'roun' de house an' ober to de woodpile. I was half-way 'roun' de house, when—"Woof! Gr-row!" hyar come de ole coon dog a-bellerin'!

I ain't been thinkin' 'bout no coon dog, an' when he t'ar loose wif dat beller I jump mos' six feet into de air an' bruk foh de fence; but I ain't tuck mo'n fo' jumps when a clo'esline kotch un'neath mah chin an' flop me

on mah back so hahd I ain't seed nuffin' but stars foh two minyits. I des' layin' dar wonnerin' is I daid yit. When I done got mah breff an' come to a little, dar's dat fool coon dog waggin' his tail an' smilin' in de dahk mos' friendly! Kase we's berry well acquainted, dat ole coon dog an' me—I done hunted 'possums wif him erlong ob Kunnel Ruggles's niggers.

So I sot up, I did, an' tried mah swaller some an' lissened. Dey ain't nobody comin', so I got up an' limped on to de woodpile an' brung de ladder 'roun' to Marse Jim.

Now dar was an ole apple tree growin' close to de house wif a long, dead limb stickin' straight out, close to de bay winder. Marse Jim an' me we backed off an' riz dat ladder up 'twel hit res' on dat limb an' leen mos' ergin de parlor winder. Den Marse Jim he clim' up, he did, an' peeked ober de top ob de blind. I's stayin' down below an' ain't seein' what goin' on inside; but, honey, de way Marse Jim cussed un'neath his breff done sent de col' chills up an' down mah spiney colyuma.

Bimeby I gottter thinkin' dat I'd like to see too. So I done slipped up de ladder an' peeked ober Marse Jim's shoulder-blade; but I ain't tuck but one look when dat mizzabul ole dead limb done bruk! De end ob de ladder, Marse Jim an' all, went froo de parlor winder—KER-BIM!—froo de winder an' plum' on top de parlor table, knockin' de light out an' skeerin' Marse Tom Granger an' Miss P'mely inter spazzums!

Er-haw-haw! My king! Dat was a sevengeable time! Miss P'mely she done squeal an' faint. Marse

"Hol' on, Shad!" sezsee, "Les' lay down a while an' laugh!"

"Ain't yo' hurt none, Marse Jim?" I ax.

Marse Jim grobbed his stummick wif bofe hands and laughed. "Haw-haw!" he says. "Hurt? Lawd, nigger! I's cut an' scotched in a million places an' bofe mah eyes gwine he black an' blue foh six weeks! I's smushed mah nose an' los' two teef; but—er-haw-haw! Shad, did yo' ebber see a lover say 'Good-night!' like dat afo'?" An' he laid down an' laugh 'twel I 'low he sho' gwine shake hisse'l to pieces.

"Les' go home, Marse Jim," says I. "I feel like I gwine be bad sick!"

"Nigger," says Marse Jim, "I doan' kin walk a step 'twel I get all dis laugh outer me!" an' he laugh a whole lot mo' an' get all weak an' teary.

Atter awhile we crawled up to de fence an' peeped froo a crack. Dar's a bright moon come up an' hit's mos' as light as day. Dar was Kunnel Ruggles a-settin' out in front ob de busted winder watchin' de yahd, wif dat great, long double-bar'l gun res'in' 'cross his knees. Down un'neath de winder ole coon dog was a-layin' on de groun' workin' away mighty ondustrious gettin' de pieces ob Marse Tom Granger's coattails out'n his teef. I heah Marse Jim laughin' way down in his stummick.

"Come erlong, now, Shad!" sezsee. "We'll go home now."

An' dat's how—'Sh! Look at dat cawk er-bobbin' like hit done gone crazy! Go 'way, Marse Bill, go 'long off home! Ole goggle-eye fish gettin' hongry ergin, an' yo' po' ole Unk' Shad sho' needin' him foh supper!

## Christmas Eve at the Mission.

**S**OME texts in narrow and dingy frames

Awry on the whitewashed wall,  
A greasy lamp with a smoking wick  
That never was trimmed at all;  
A couple of rows of wooden chairs,  
A curtainless window bare,  
A rusty stove, and carpetless floor,  
But the spirit of God was there.

**F**ADED women and baggard men,  
Faces weary and worn  
With pain and famine and stress of life,  
Garments tawdry and torn;  
An organ wheezy and out of tune,  
And a preacher pale with prayer,  
But a star looked in like an angel's face,  
And the spirit of God was there.

MINNA IRVING.

## A Shrewd British Judge.

**J**UDGE FRENCH, who recently died in England, was a genuine humorist himself and appreciated humor in others. He often used to say that no man without a sense of humor could have borne the pathos of the sordidness of life and the absolute lack of character which were exhibited in his courts. The litigants he loved least were those who thought he was to be easily deceived by lying. He was a master-hand at telling which side was lying the least. One day in an interpleader action a man set up the plea that he had lent his son \$1,200. It seemed impossible to tell where the truth lay. All the parties were foreigners, and addressed the bench as "Your most noble honor." "Ah, now," said Judge French, "how kind it was of your father to lend you \$1,200." The man thought the judge believed him. "And how did you carry that \$1,200?" asked his honor. "All in mine pockets in the good gold," replied the witness, still laughing. "Ah, what a load!" went on the judge. "Yes, what a load," responded the witness. "I don't believe a word of it," returned the judge; "judgment for the execution creditor."

## Old Foggy Knew.

EXPERIENCE TEACHES PEOPLE.

"My parents considered coffee simply a harmless beverage for old and young, so when a mere baby I commenced to drink it, and when I reached womanhood, found myself troubled with nervousness, headache, and an irritable temper, and to obtain relief I drank more and more coffee, thus adding fuel to the fire.

"I grew worse until life was one black night of pain. My nerves were shattered, body wrecked with suffering; my stomach gave out and utterly refused to digest the most simple foods, and finally I lay for weeks starving and longing for food, but unable to eat more than just enough to keep me alive.

"I grew worse until life was one black night of pain. "While in this state, my next-door neighbor brought me in a fragrant cup that I supposed was some new grade of coffee, and although I had suffered so terribly from its effects, the temptation was too strong to resist, and I drank it with relish. I noticed it had a rich agreeable taste and I drank it without distress. She repeated the kindness two or three mornings.

"I began to congratulate myself that it was not coffee that hurt me after all. I was assuring my friend of this one day when she astonished me by saying that I was not drinking coffee, but a pure food drink called Postum Food Coffee, made from nourishing grain, for building up the system and nerves instead of tearing them down.

"I then began to drink Postum regularly, and to get well slowly but surely. To-day I am a strong, hearty woman; my nervous system is entirely rebuilt and with a reserve force of strength in time of need; I sleep well and awake refreshed, and feel bright for each day's task, with no indigestion or stomach trouble, and a good, strong, active brain ready for any mental strain or toil. There is no doubt on earth that coffee nearly killed me.

"A friend of mine was obliged to resign her position as school teacher, because of extreme nervousness caused by coffee drinking. I induced her to use Postum in place of coffee, and at the end of four months she began to teach again, her nervousness gone and feeling and looking ten years younger; her sallow complexion having become a beautiful, healthy bloom." Name given by Postum Co., Battle Creek, Mich.

# Jasper's Hints to Money-makers

**NOTICE.**—This department is intended for the information of the regular readers of *LESLIE'S WEEKLY*. No charge is made for answering questions, and all communications are treated confidentially. Correspondents should always inclose a stamp, as sometimes a personal reply is necessary. Inquiries should refer only to matters directly connected with Wall Street interests. Subscribers to *LESLIE'S WEEKLY* at the home office, at regular subscription rates, namely, \$4 per annum, are placed on a preferred list, entitling them to the early delivery of the paper, and in emergencies, to answers by mail or telegraph. Address "Jasper," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

IT IS becoming more evident from day to day that the task of holding up the market is not an easy one and those who are engaged in it would gladly get rid of it if they could. The recent outburst against the trusts, which has been enormously intensified by the attitude of President Roosevelt, has stimulated a feeling of enmity toward the promoters of such enterprises, chief among whom every one recognizes J. Pierpont Morgan. Recently an observant New Yorker said to me that he doubted if any one man in the country was getting to be more generally despised by the public than Mr. Morgan. Knowing the great banker as I do to be sympathetic, generous-minded, and philanthropic, as well as a masterful man of finance, and knowing, furthermore, that those who delight in abusing him for the most part have never seen him in their lives, and echo in their anger simply the voices of envy and malice, I find no justification for these bitter attacks.

I have no sympathy with those whose little minds have no room for good thoughts of better, abler, and more successful men, and much of public sentiment, I fear, is born in malice and covetousness. Mr. Morgan is a shining mark and he must take the consequences. During the long period in which all his reorganization schemes were profitable to others as well as himself, he remained a great financier, and the public worshiped at his throne, but since evil times have fallen upon the stock market and upon some of Mr. Morgan's enterprises, and especially his over-capitalized steel trust, causing heavy losses to his numerous followers, he has become the subject of criticism, contumely, and contempt, which finds expression abroad as well as at home.

Responsibility always goes with power, and, rightly or wrongly, those who have suffered losses by investments or speculations in Morgan securities place the blame upon him. That so much importance should attach to his position in the market is most unfortunate. The *London Daily Mail* properly expresses the situation when it says: "It is a misfortune for the world that such vast issues should hang on the discretion and judgment of a single man, for the failure of any one of Mr. Morgan's trusts may mean a financial catastrophe." Many another besides our London contemporary has thought of the possibility of such a contingency as Mr. Morgan's death, and I have heard that heavy speculators, especially abroad, have endeavored to fortify themselves against such a misfortune by insuring Mr. Morgan's life in their own interests.

It is no secret that Mr. Morgan was the most influential factor in bringing about the relief to the money market which the Secretary of the Treasury extended a few weeks ago. Nor is it a secret that he has been earnestly laboring both in New York and in London to relieve the money stringency. His tremendous influence with the banks and the trust companies has been used to its fullest extent to let down the restrictive bars and to enable large operators to secure required accommodations. In a number of instances, when prominent operators have found their interests clashing recently, Mr. Morgan has stepped in as an adjuster, a reconciler, and compromiser. His power in certain directions with the press has also been exerted to a marked degree, and I might say that, but for the tremendous influence which he has exerted, the money-market situation would have been far worse than it is—and it is bad enough when trust companies are offering to large depositors as much as 4 per cent. interest on their accounts.

Some financial writers are boasting that money on call is cheap and getting cheaper, and that it can be had around 4 per cent. The falsity of this statement is evident from the fact that trust companies, which are usually the heaviest loaners of cash, are themselves willing to pay 4 per cent. on December deposits. Money is not cheap and will not be cheap, in the judgment of

veteran bankers, for some little time to come, and if anything should happen to Mr. Morgan, or if his efforts to maintain the equilibrium of the market should signally fail, a compulsory liquidation, ending in a most critical situation, would certainly eventuate.

Mr. Morgan's interests must remain on the bull side, just now particularly, because he must find a market for the stock and bonds of his new International Mercantile Marine Company, the securities of which are to be listed in New York and London, we are told, early next year. The underwriting syndicate which has this matter in hand may be powerful enough to do what was done with the United States Steel securities, viz., successfully unload a great part of them on the public—and it may not, and certainly will not, unless the stringency in the money market is greatly relieved. The syndicate which underwrote \$50,000,000 of the 4½ per cent. bonds for Morgan's Marine Company is perfectly willing to sell these bonds at par, and the offer was recently made to give the bonds, in lieu of cash, to the owners of the White Star Line when the latter sold their shares to the Morgan company. But English investors did not seem to be anxious to accept the bonds in place of cash, though 4½ per cent. is regarded as a high rate of interest abroad.

Perhaps American investors will regard these bonds and the shares which underlie them with greater favor. That remains to be seen. This is one of the burdens that Mr. Morgan bears, and another which he has borne for the past year is the United States Steel Corporation. It is not denied that something is liable to happen to the United States steel trust. Its proposed new bond issue has been delayed, and possibly will not be authorized or undertaken. Talk of a reduction of the dividend on the common shares or its entire abandonment is beginning to be heard. It is admitted that the earnings for the past two months will probably show decreases because of the fuel shortage, the shutting down of some mills, and the reduction in prices of many of the finished products. The home demand is now being abundantly met and the steel trust proposes to send its surplus products abroad and sell them at lower than the American prices, in order to meet foreign competition.

If these reports, which are not denied, are confirmed, it is safe to say that insiders will know what is to happen before the news is permitted to reach the public. It is not surprising that Morgan interests are said to be bitterly opposed to legislation at Washington, calling for enforced publicity of the affairs of trusts. The passage of the dividend on Steel common would leave that stock no better off than American Lee common, and the big holders of the former, like those of the latter, would be entirely out of the market long before the public realized what was to happen.

Months ago I called attention to the rapid increase in the importations of foreign iron and steel. I predicted that the high prices of these commodities, the result of our heavy domestic demand, coming at a time when the iron industry abroad was suffering from stagnation and oppression, would stimulate heavy importations of iron and steel and open the way again for the foreign manufacturer to compete with us. This is precisely what has happened, and this competition means lower prices in the American market; it means opposition to the steel trust, and this fact is at the bottom of the announcement that the latter is about to send its surplus products abroad and sell them at lower than the prices at home. The moment the steel trust undertakes to do this sort of thing, the demand for the removal or reduction of the duties on trust-made goods will be strengthened, for the action of the trust will be the strongest argument that can be made by the opponents of protection in Congress.

The official report by the Treasury bureau of statistics recently, states that the importations of iron and steel manufactures, during the ten months ended with October last, are larger than in any year since 1891 and double those of last year. Their aggregate value was \$32,000,000, and nearly every class of iron and steel was included in these imports. It was the reversal of these conditions that gave an impetus to our iron and steel industry after its period of terrible depression a few

years ago. These were the times when the iron industry was booming in Germany, in Belgium, and England. Prices were high in those markets, and this gave to the American manufacturer the opening we sought for the surplus products of our depressed industry. Then came the steady growth of American trade, increased wages, higher prices, and the gigantic steel trust. Now, with the foreign industry depressed, with wages abroad at a lower level, and with an opening for foreign goods in the American market, we are importing enormous quantities of pig iron, ingots, blooms, bars, tin plates, and foreign cutlery. On top of this we are expected to meet a demand by Congress for a reduction of the tariff on iron and steel. We are paying higher wages than ever before, are adding heavily to the charges for fuel, and are finding the home demand gradually but surely lessening. What will the harvest be?

The money market situation, as I said last summer it would be, now is the controlling factor. Even the most optimistic foresee that cheaper money cannot be anticipated this year. We must have liquidation in New York, and there must be liquidation in London in the Kaffir stocks, which have long been dull and depressed, and which had no basis for their rise beyond the booming paid for by the speculative gold-hunters of South Africa. Financial troubles are still anticipated in Germany, and both political and financial difficulties depress the French Bourse. More than one financier fears a monetary crisis before New Year's Day, and the action of our banks in limiting loans and rejecting all but the best collateral, and the action of foreign bankers in refusing to renew American loans, except on the most favorable terms and the best collateral, are to be commended because they are intended to stem, if possible, the current of adversity and distress.

"C." Miles City, Mont.: Read the introductory note of my financial department.

"G." Chicago: Four dollars received. You are on my preferred list for one year.

"W." Sherbrook, Canada: Four dollars received. You are on my preferred list for one year.

"W." Montreal, Falls: Two dollars received. You are on my preferred list for six months.

"H." Brooklyn, N. Y.: Four dollars received. You are on my preferred list for one year.

"M. E." Newark, N. J.: Will make inquiries regarding the Mexican Petroleum Company.

"R." Madison, O.: I do not advise the purchase of the shares of the Agnew Auto. Mailing Machine stock. Don't gamble.

"G." St. Paul: The error was not mine. I know the name of the man perfectly well, but appreciate your courtesy.

"A. H. S." Brooklyn: The only way to be on my preferred list is to become a subscriber for *LESLIE'S WEEKLY* at the home office, at full rates.

"S." Chicago: I never have believed in any of the get-rich-quick concerns, and do not advise dealing with the so-called co-operative book-making concern.

"N." Washington: (1) Until you pay for your stock it is not put in your name. (2) "When issued." (3) United States Shipbuilding is a fair speculation.

"B." Providence: (1) No. (2) Do not advise operating at present, though, unless relief comes to the money market, most active stocks should sell lower.

"M." Newark, N. Y.: One dollar received. You are on my preferred list for three months. (1) I think it is very heavily capitalized, too much so, in fact. (2) The property is highly speculative.

"Cheap," Memphis, Tenn.: Men of prominence connected with the United States Realty Company gave out the tip to buy the shares, and especially the common, for speculation, some time ago. It is one of the cheapest of the industrials and will bear watching.

"C." Brooklyn: Two dollars received. You are on my preferred list for six months. (1) Wolverine at present, but Green's Consolidated Copper now looks like one of the cheap copper stocks, as it has resumed the payment of dividends. (2) Everything depends upon the condition of the copper market as to what the copper shares will do. The outlook for the new year is not reassuring unless a combination of copper interests can be effected.

"C." Wilmington: (1) The increase in the capital stock of Chicago Great Western, the managers insist, will eventually add largely to the earning of the road. (2) Your margin is certainly very slender for such a market. (3) I would average up on the lowest possible plane, awaiting the best opportunity for it. (4) It is well regarded. (5) I do not think Chicago Great Western common is better than Toledo, St. Louis and Western common or Kansas City Southern for a long pull.

"Spade," Minneapolis: Four dollars received. You are on my preferred list for one year. Indicate your pseudonym whenever you make inquiries. Otherwise it may be overlooked. The difficulty about shorting such a market lies in the power of combinations to do precisely what they did with Manhattan Elevated, namely, catch the shorts by making some deal to effectively advance the shares. The insiders have all the advantages on both sides of the market and you must run your chances of having them set up the game against you. Most all stocks are still too high.

"Inquirer": (1) I would sell at the first favorable opportunity. The market is liable to fluctuate and a little rise may help you to get out. (2) My information agrees with yours and the exchange might not be a bad thing. (3) It all depends on business and market conditions. (4) Ditto. (5) Many expect that some day American Sugar stock will meet its Waterloo. It makes no reports and carefully safeguards its secrets. It is such a gamble that I seldom advise speculation in it, and investment never. (6) A tighter money market and gold exports of any considerable extent would be apt to cause a lower level before February.

"G." Amsterdam: (1) Everything depends on money market conditions. A tremendous effort

has been made and is being continued to keep the situation safe until after the heavy January disbursements have been made upon which the lingering hope of a boom is still predicated. (2) American Smelting and Refining is heavily over-capitalized and must be suffering from the shrinkage in the price of silver and copper, and yet a party largely identified with it recently spoke to me of its prospects in the most hopeful way. Without having inside information I should hesitate to sell it short, though the fate of most of the over-inflated industrials seems to be mindnumbing.

"J. M." New York: (1) The Seaboard collateral trust 3a, created last year, are redeemable at 105 and are secured by the deposit of \$20,000,000 of the first 4s on the road. Only \$10,000,000 of the collateral trust 3a was authorized. (2) The Union Pacific convertible 4s were also created last year and are secured by \$50 miles of railroad, a majority of the stock of the Southern Pacific, and other securities of the company not covered by the first mortgage. I see no reason why other bonds cannot be issued ahead of them. (3) The Colorado and Southwestern stock is a voting trust for five years in 1899, the trustees including F. P. O'Leary, J. Kennedy Todd, and others. (4) I know of none for sale.

"S." Buffalo: (1) If the Grand Trunk should build its proposed new transcontinental line it would probably interfere somewhat with the earnings of the Canadian Pacific. (2) It is by no means certain that the recent increase in wages by some railroads will put an end to the agitation in railroad circles generally for increased compensation. The locomotive engineers, it is said, are about to ask for increased pay. I do not see how the railroads expect to make as good a showing in the future as in the past, in view of the large additional expenditures they will be required to make. (3) The refunding of the New York Central 7 per cent. bonds, maturing January 1st, and their replacement with a bond paying only half the old rate, it is said, will save the Central \$800,000 per annum.

## Life-insurance Suggestions.

**NOTICE.**—This department is intended for the information of readers of *LESLIE'S WEEKLY*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *LESLIE'S WEEKLY*, 110 Fifth Avenue, New York.

I HAVE received a surprising number of inquiries from readers who do not seem to understand what is meant by a life annuity. This form of investment and insurance combined is very popular abroad, especially so in France and England. It is a common custom for a Frenchman or an Englishman who has accumulated any considerable amount of money to invest it with one of the great insurance companies in a life annuity; that is, the money is turned over to an insurance company with an understanding that it shall pay annually to the investor a stipulated amount of money up to the time of his death. Then the principal which he paid to the insurance company would belong to the latter. The great life insurance companies of the United States are now doing a constantly increasing annuity business, and it looks as if this feature of life insurance in our bustling, busy country, where so much uncertainty attends the accumulation and retention of fortunes, would rapidly grow in favor. Some men who are not able to save much money, who have no dependants, and who are only anxious to provide for themselves in their old age, are in the habit of taking every extra \$1,000 they accumulate and invest it in an annuity. At the age of fifty-five a thousand dollars will purchase an annuity of about \$80 a year; at the age of sixty-five, \$112 and at the age of seventy-five, about \$158 a year. Many carry annuities for themselves as well as life insurance for their families. Women who have been left small estates find an annuity an excellent form of safe investment. Their expectation of life is greater than that of men, and the annuity paid them is therefore somewhat smaller. If a woman has accumulated a thousand dollars at the age of thirty-three, she can invest it in an annuity and receive a little over \$50 dollars a year in return, thus adding about one dollar a week to her income for life. At the age of fifty-three she would receive about \$70 a year on the investment of a thousand dollars in an annuity; at sixty-three, about \$93, and at seventy-three, about \$135.

"H." Newark, N. J.: The Prudential policy to which you refer is excellent and ought to be satisfactory.

"M." Hoboken, N. J.: (1) A straight life would be the cheapest. (2) Either one of the three companies you mention ought to be satisfactory.

"B." New York: If you have no beneficiaries, why not buy a life annuity which would immediately give you its benefits? If you want to defer the payments, however, a ten or fifteen-year endowment would seem to suit your circumstances.

"L. B." Richmond, Va.: (1) There is no difference. (2) I would certainly discontinue the fraternal certificate and put the money in a policy in one of the strongest old-line companies you can find. You are not buying by anything for yourself by continuing the certificate and have absolutely no assurance that all you put in will not ultimately be lost.

NOTICE TO TAXPAYERS.  
DEPARTMENT OF FINANCE.  
BUREAU FOR THE COLLECTION OF TAXES  
NO. 27 CHAMBERS STREET  
STEWART BUILDING.  
NEW YORK, DECEMBER 1, 1902.

NOTICE IS HEREBY GIVEN to all persons who have omitted to pay their taxes for the year 1902, to pay the same to the Receiver of Taxes at his office in the Borough in which the property is located, as follows:

BOROUGH OF MANHATTAN, No. 57 Chambers Street, Manhattan, N. Y.

BOROUGH OF THE BRONX, corner Third and Tremont Avenues, The Bronx, N. Y.

BOROUGH OF BROOKLYN, Rooms 2, 4, 6 and 8, Municipal Building, Brooklyn, N. Y.

BOROUGH OF QUEENS, corner Jackson Avenue and Fifth Street, Long Island City, N. Y.

BOROUGH OF RICHMOND, corner Bay and Sand Streets, Stapleton, Staten Island, N. Y., before the first day of January, 1903, as provided by Section 919 of the Greater New York Charter (Chapter 378, Laws of 1897).

Upon any such tax not paid before the first day of December, 1902, one per centum will be charged, received and collected in addition to the amount thereof. Upon such tax remaining unpaid on the first day of January, 1903, interest will be charged, received and collected upon the amount thereof, at the rate of seven per centum per annum, as provided in Section 914 of the Greater New York Charter, to be calculated from the sixth day of October, 1902, on which day the tax became due and payable and became a lien as provided in Sec 914 of the said Charter.

DAVID E. AUSTEN,  
Receiver of Taxes.

## Jasper's Hints to Money-makers.

Continued from page 697.

"M." Philadelphia: Will inquire.  
"P." Rochester: Answer by letter.  
"L." Bangor, Me.: Answer by letter.  
"N." Trenton, N. J.: Prefer the railroad shares for a long pull.

"S." Philadelphia: I answer financial inquiries only. Address your letter to some leading diamond merchant. Try Ludwig Nissen, 18 John Street, New York.

"L. B. H." Bellefonte: Wood, Harmon & Co.'s real estate propositions have been handled with great success and have been highly spoken of by competent authorities.

"C." City of Mexico: The United States Rubber Company, it is reported, is largely interested in the company which has the crude rubber concession in the Arre district of southern America, and will get its crude rubber from its own plantation in due time. This is important news, if true.

"C." Chicago: (1) The trouble with such stocks is that if they are not dealt in on the exchange it is sometimes difficult to find a market for them. I know of no purchaser for your Mergenthaler-Hornton Machine stock. (2) Your subscription has expired. You should renew it at the home office, at full rates, if you desire preference in the mail and in this list.

"McG." New York: One dollar received. You are on my preferred list for three months. (1) I do not regard the common stock of the Central Foundry Company as a purchase. It represents water and has no prospects of dividends. (2) The shares are not assessable unless the company should be reorganized and an assessment levied, the payment of which will be voluntary.

"W. M. M." New York: (1) It may be too early for you to average up on your steel, but I would average at the first good opportunity and then sell at the least possible loss. I am told that if a short interest in the stock can be induced, an effort will be made to advance it by those who have quantities to unload. (2) Better keep your Ontario and Western for the present.

"P." New York: (1) I would not ascribe my Mexican Central, but would take a profit at the first favorable opportunity. It is selling at twice the price at which it sold last year, on the excellent earnings it is reporting, showing net for the past ten months almost double those of the preceding year. The decline in silver, no doubt, has affected all Mexican securities. (2) Arthur Crump.

"P." Doloresville, N. Y.: As I have said before, any stock is regarded favorably by speculators after its price has been cut in two. While the copper situation is not all that could be desired and while the properties owned by the Amalgamated are not, in my judgment, worth anything like the capital of this inflated concern, still it may become a speculative favorite at any time, but I would not operate on slender margins.

"L." Louisville, Ky.: (1) Talk of a bull pool in American Sugar has been widely whispered. It is one of the stocks that no one but an insider can tell anything about. (2) I have long believed that the New York Central would have to use the Manhattan Elevated as an outlet for its passenger business at New York. In fact, the entire surface and suburban system might be very convenient for the Vanderbilts to control, in connection with the distribution of passenger traffic. I would not sell Central short.

"Tico." Baltimore: Four dollars received. You are on my preferred list for one year. (1) Kansas City Southern, Toledo, St. Louis and Western, Missouri Pacific, Consolidated Gas, Wabash, Debutene Bn. and Texas Pacific. This is not a good market to get into, however, until the money stringency is passed. (2) There has been a noticeable hesitation on the part of buyers in the bond market of late, but with cheaper money nearly all bonds setting over 4 per cent. will command a wider market and higher prices.

"Coal." Harrisburg, Penn.: A terrible shrinkage in the earnings of the coal roads, on account of the strike, continues to be shown. The deficit of Reading, during the four months ended November 1st, was nearly two million dollars. It is a mystery what sustains the high price of Reading common under the circumstances. (2) The increase of the quarterly dividend on Manhattan to 1 1/2 per cent. does not signify that this rate will be continued. It is believed that on the announcement insiders sold much of their stock. (3) I doubt if the rumored increase in the dividend of the Louisville and Nashville will be paid. Take your profit.

"C. B. D." New Haven: (1) What the Standard Oil crowd may do with Amalgamated can only be surmised. The fact that they unloaded at double the present price leads many to believe that they have been picking it up on the decline. Some familiar with the copper situation, however, declare it is not worth picking up even at the existing low level. If Congress will pass a law compelling trusts to publish regular statements of their condition, insiders will be deprived of the advantages they have so unobtrusively utilized to their own enrichment and to the impoverishment of the public. (2) Chicago Great Western sold a year ago as low as 16 and this year has been down to 22. On rumors of its absorption by large competing interests, it has had occasional speculative rallies, but it is a good way off from dividends. The proposed increase in its capital from \$30,000,000 to \$50,000,000 indicates that the Chicago Great Western is reaching out for new and important terminals, as the Wabash has done so successfully. (3) Yes, but I cannot name a price. I do not advise purchases at present. (4) Unless the money stringency is relieved we should have lower prices.

"J. R." Chicago: One dollar received. You are on my preferred list for three months. (1) No one can absolutely foretell the course of the market nor the outcome of any future event. One must be guided as to the future by the experience of the past, and every one knows that periods of depression always succeed periods of prosperity. We have had three prosperous years. It is possible that we may have one more, but the chances, regarding which you are perhaps as able to judge as I am, of another boom, are constantly lessening and are not as great as the chances of a decline. (2) I believe that the strictly investment securities which you hold, like New York Central, New York, New Haven and Hartford, Northwest, Morris and Essex, Lackawanna, Delaware and Hudson, Boston and Albany, Pennsylvania, and Boston and Maine will decline much less than other securities not having their high investment quality. Some of these no doubt will also profit by stock dividends or rights of considerable value. After these have been issued, perhaps the time to sell will come, but on the whole the chances favor lower prices before the close of next year. Whether they will be much lower than they are to-day for the class of stocks you hold, I would not care to predict.

New York, December 11, 1902. JASPER.

## A Truthful Conductor.

"I declare, those trolley conductors can't tell the truth."  
"What's wrong now?"  
"Why, the one on the car to-night put me off three blocks from my corner."  
"What did he say to you?"  
"Why, he said, 'This is where you get off, madam.'"  
"Well, it was, wasn't it?"

**On the Safe Side**

"That Little Stumbling Block — IF"

A GOOD PROSPECT is one thing.

But if you can put your money in to the stock of A GOOD MINE (The Golconda Consolidated Gold Mines Co.) there will be no "if" about the dividend question.

The Golconda will RESUME the payment of quarterly dividends March 1, 1903.

This is a positive statement. There is no dodging the issue, it is not contingent on whether the vein of ore is there, or of how great it is in extent—all of these questions were settled years ago.

One great fortune has been made from the Golconda already by former owners.

But so great a body of rich ore deserves a richer equipment—all told in detail in the "Golconda Book"—send for it—and the present stock sales are to provide money for that purpose.

Then, WATCH THE GOLCONDA!

Send for my book, "The Earning Power of Money."

### Special Prizes for Amateur Photographs.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unsuitable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not. N. B.—Communications should be specifically addressed to "Leslie's Weekly, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

## I Will Cure You of Rheumatism

Else No Money is Wanted.

After 1,000 experiments, I have learned how to cure Rheumatism. Not to turn bony joints into flesh again; that is impossible. But I can cure the disease always, at any stage, and forever.

I ask for no money. Simply write me a postal and I will send you an order on your nearest druggist for six bottles Dr. Sloop's Rheumatic Cure, for every druggist keeps it. Use it for a month and, if it succeeds, the cost is only \$5.50. If it fails, I will pay your druggist myself.

I have no samples, because any medicine that can affect Rheumatism quickly must be drugged to the verge of danger. I use no such drugs, and it is folly to take them. You must get the disease out of the blood.

My remedy does that, even in the most difficult, obstinate cases. No matter how impossible this seems to you, I know it and I take the risk. I have cured tens of thousands of cases in this way, and my records show that 30 out of 40 who get those six bottles pay gladly. I have learned that people in general are honest with a physician who cures them. That is all I ask. If I fail I don't expect a penny from you.

Simply write me a postal card or letter. I will send you my book about Rheumatism, and an order for the medicine. Take it for a month, as it won't harm you anyway. If it fails, it is free, and I leave the decision with you. Address Dr. Sloop, Box 999, Racine, Wis. Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

## The Story of a Gold Mine By Lee S. Ovitt Looking It Up

"Be sure you're right, then go ahead."

In all of my advertisements regarding the stock of the Golconda Consolidated Gold Mines Company, that is being offered to investors at this time, I make use of one word very frequently. That word is INVESTIGATE.

I am fully alive to the fact that this is not the only good mining stock that is being offered, but feel that I can prove it to be THE BEST OF THE GOOD ONES.

The Golconda Book that I send out to those who write in for particulars, tells the whole story of the Golconda mine from its discovery down to the present time.

And it shows ACTUAL PHOTOGRAPHS of the property, mill, inside and out, ore bodies, water power, etc., etc., so that one may SEE that this is a GREAT MINE TO-DAY.

The aim of its owners is to make it a GREATER GOLCONDA.

(In buying stock make all checks, drafts, money orders, etc., payable to Lee S. Ovitt, Fiscal Agent)

### A South African Exposition.

IT IS important to note the announcement of a proposed international peace exhibition to be held at Johannesburg, 1904-5. Mr. H. Clay Evans, our consul-general in London, says that it is believed that the demand for machinery, tools, and other products of American manufacture in that country will be such as to command attention. The managers have established an office in London and say that they expect to visit America very soon. The prospectus of the exhibition reads, in part: "Johannesburg is the best centre in the whole world for a large industrial exhibition. This is undoubtedly the best opportunity ever offered manufacturers for opening up trade in new and vast territories of British South Africa. The demand for goods for many years to come will be enormous."

## Helping Yourself and Others

IT IS claimed by many that this is a selfish world, and as a result we are apt to think of ourselves before we think of others. This is perhaps natural because the instinct of self-preservation is one of the first to be implanted in the human heart, therefore any person who suggests a general plan whereby we may benefit others before ourselves is a public benefactor. *Life insurance does just this thing.* Ex-Postmaster-General John Wanamaker, in explanation of the enormous amount of insurance on his life, said that he took it because he was insurable, and realized that accident or ill health might befall him at any moment, and he believed life insurance to be one of the best forms of investment, not only for himself but primarily for others, because when one annual premium has been paid an instant guarantee is not only given for repayment of principal and interest, but very much more.

Mr. Wanamaker also says that he believes in life insurance, for it enables a man to give liberally to others during his lifetime and still make ample provisions for such an estate as he desires to leave. Nothing else in the world will make such provision for a man and for his family as a life insurance policy in a strong company. A married man with a family is easily persuaded that life insurance is a necessity, and hence a man who neglects providing for this necessity and keeps a helpless wife and family unprotected is worse than a criminal. The thoughtfulness shown by so many persons in securing insurance which is brought about by love for others is as unselfish as it is praiseworthy.

In carrying out these commendable suggestions we must not forget that in business life most men occupy entirely different positions. While the vast majority of persons labor to obtain wealth so as to live comfortably themselves and make ample provision for their families, they frequently neglect the means placed within their immediate reach for present protection against misfortune. In the pursuit of fortune a man's income seems to melt; he can scarcely tell where it goes, although he pays everything that falls due, and as a result he finds himself at the end of the year in exactly the same position he was at the beginning—he has saved nothing. If he relies on the usual course of laying aside a portion of his income, he finds it so conveniently at hand when some luxury is brought under his notice that one brief temptation nullifies all his previous self-sacrifice. A policy of life insurance is protected against this danger not only by sentiment, but by the importance the present investment bears upon its future value; hence a policy is a first-class investment, and for two reasons: First, it yields a good interest return; second, the premiums paid, as a matter of course, are looked upon as a part of the necessary expenditure, and money which would otherwise be carelessly dissipated is thus prudently set aside for the future.

A life policy possessing special interest for the large class of persons just mentioned, and who are concerned not only for the present but particularly for the future, is the Endowment and Gold Coupon Bond recently offered the public by the Provident

Savings Life Assurance Society, of 346-348 Broadway, New York.

Mr. Edward W. Scott, President of the Company, has spent a busy life in the practical and successful conduct of insurance affairs, and the policies issued by the Company of which he is the Executive represent the very best plans of profitable investment and permanent protection for both the individual and the family. The Endowment Bond Policy just mentioned is especially desirable, as the holder is entitled to surplus accumulations at the end of twenty years, and it may be noted in this connection that the total premiums payable by persons in the prime of life are considerably less than the guaranteed cash value at the end of twenty years. These accumulations are likely to provide a handsome interest return on the money invested, and, over and above all this, an immediate cash benefit in case of death at any time is secured. At the end of twenty years the insured is put in possession of gold bonds with five per cent. interest coupons attached, marketable securities of high negotiable value, guaranteed to be worth thirteen hundred dollars for each one thousand dollars of face value.

This policy has so many commendable features that careful inquiry should be made by every man who is interested not only in the future of his family, but in his own future as well. Upon application full information will be gladly submitted by the Home Office or an Agent of the Company, not only in relation to the Gold Bond Policy but also in regard to any other of the desirable contracts issued by the Company.

In this connection it is a pleasure to say a good word regarding the growth of the Provident Savings under the administration of President Scott. While the Company is conservative, yet it is rapidly progressing and possesses an enviable standing as a strong and well-managed financial institution. With such a record it deserves the prosperity which it has achieved and is still achieving.

### Business Chances Abroad.

IN A statement concerning the present status of the American shoe trade at Vera Cruz, Mexico, and the surrounding country, our consul at that port, William W. Canada, says that only the high prices of American shoes prevent them from driving all others out of the markets. What is needed, he says, at Vera Cruz is an American shoe house, well stocked at all times with an assortment as varied as the tastes of the people. Such a house would have all the local trade and also that of the interior towns, but it would have to be

No. 2  
The Story of a Gold Mine  
By Lee S. Ovitt

## Dry Details

"Take Nothing on Faith."

This is the third instalment in the story of the Golconda Gold Mine. Dry details, but important. I will make this chapter short, and to the point.

The Golconda Mine was first discovered in 1887.

The Golconda Consolidated Gold Mines Company, of Sumpter, Oregon, acquired this property in the spring of 1902, from the former owners, Messrs. English and Son.

There is a fine 20 stamp mill on the property (the "Golconda Book" shows photos of mill, inside and out), besides other equipment.

But the present owners are ambitious. They propose to put their mine at the top of the heap in Oregon—greater mill, greater equipment, GREATER DIVIDEND.

And Oregon mines are among the greatest dividend producers on this continent!

It will take money. And so, a sale of stock was determined upon.

The stock was put in my hands for sale.

The price is 50c. a share, par value \$1.00, non-forfeitable, non-assessable, no personal liability.

It will begin to draw quarterly dividends March 1, 1903.

(In buying stock, make all checks, drafts, money orders, etc., payable to Lee S. Ovitt, Fiscal Agent)

### LEE S. OVITT, Fiscal Agent

under American supervision or management.

THE INFORMATION comes that trade conditions in Belgium have greatly improved during the present year and the "hard times" which have been so severe in that country for a considerable period seem to be over. There is more inquiry for American goods than ever before, and the people seem to be in earnest. The greatest demand is for farm and industrial machinery, electrical supplies, and canned and dried fruits.

IN A recent review of British trade, the London Daily Mail states that the Russian Agricultural Department is reported to be making arrangements to play an important part in supplying the London markets with beef, in opposition to American meat exporters. It says special steamers have been built with freezing chambers, the Russian government assisting by subsidies, and that it is intended that they shall ply between a Russian port, via the Kiel Canal, and London, with huge cargoes of fresh meat.

 The Story of a Gold Mine  
 By Lee S. Ovitt

## The Last Chapter

"Opportunity waits on no man."

On other pages of this periodical I have told briefly the story of the Golconda Gold Mine.

The object I had in view in making it a "serial" story was to get the attention of some of the readers of this magazine at SOME PART of my story.

It is a true story.

I have a sequel to it in my "Golconda Book"—32 pages, splendidly illustrated, which every reader of this magazine should send for.

For my "Golconda Book" is PROFITABLE reading.

It shows how a man or a woman may invest some of their surplus money in a gold mine that has always paid dividends, and that will RESUME THE PAYMENT OF DIVIDENDS MARCH 1, 1903.

Such a proposition admits of no argument. It promises something DEFINITE to the investor.

I shall be pleased to answer inquiries regarding the Golconda stock (50¢ a share, par value \$1.00), and am particularly anxious to send that "Golconda Book" to those who are interested.

It is certainly a "Book of Opportunity."

(In buying stock, make all checks, drafts, money orders, etc., payable to Lee S. Ovitt, Fiscal Agent)

### American Fruit in Germany.

IT IS the testimony of Consul-General Mason, of Berlin, that there is hardly a reasonable limit to which our dried and preserved fruit export trade to Germany may not in time be developed, provided the business is conducted skillfully, with intelligent enterprise, and in good faith. The one exclusively American preserved-

fruit store in Berlin has trebled its business during the past year and is now contemplating removal to larger and more costly quarters in the principal retail thoroughfare. Grocers and provision dealers in all quarters of the city display boxes of California dried pears, apricots, prunes, apples, and peaches in all their show windows as their most attractive advertisement. It is not necessary, Mr. Mason says, that Ameri-

can apples, the superior tenderness and flavor of which are now well known in Germany, should be sold there as cheaply as they have been offered in former years, but it is necessary that they should be picked, wrapped, and packed in ventilated barrels far more carefully than hitherto. European methods of packing are necessary to give the American apple a fair chance in the German market.

Judge**

## THE CECILIAN THE PERFECT PIANO PLAYER

### THE EVIDENCE OF ITS PERFECTION

**ITS "TOUCH"** is absolutely non-mechanical.  
The connection between the mechanical finger which strikes the key and the lever which operates the finger is entirely different from that found in any other player, and produces a "touch" upon the piano key indistinguishable from that of the most capable human pianists.

**ITS "POWER OF EXPRESSION"** is limited only by the feelings of the operator.  
New devices, giving the operator perfect control over both bass and treble, and making the most delicate effects in tone shading easily possible, are found in the Cecilian.

These facts we are ready to PROVE, if you will give us the opportunity.  
Write us for booklet giving full description. Address:

## Socialism's Startling Strength.

THE RISE of Socialism is the most startling revelation which was made by the recent congressional election. When Eugene V. Debs, the most magnetic candidate which the Socialist party ever had, polled 86,000 votes for President in 1900, the country was surprised. Old Republican and Democratic chieftains instantly saw that a new force had entered into the politics of the country, with which the two big parties would henceforth have to reckon. This judgment receives a striking confirmation by the fact that over 400,000 votes were polled for Socialist candidates in the recent canvass for Congress, or five times as many as Debs received two years ago, after the most active presidential campaign by the most eloquent and picturesque of Socialism's leaders.

Socialism's great showing was not confined to any section of the country. Its candidate for Governor of Massachusetts received 34,000 votes. In California, Texas, Wisconsin, Illinois, Minnesota, Kentucky, Indiana, and many other States its vote, for candidates for State officers or for Congress, went up to high figures. Chicago cast 12,000 Socialist votes, and the proportion in Cleveland, Toledo, Minneapolis, Milwaukee, Covington, Dayton, and other towns in the Mississippi valley was as large as in Chicago, and in some of them much larger. Naturally the Socialists are elated at this great showing, and they intend to have tickets in the State elections of 1903, and to make a supreme effort in the presidential canvass of 1904.

All this has a portentous significance. Socialism is here to stay, and its natural ally is the Democracy. When David B. Hill put his coal nationalization plank in the New York platform in the recent canvass he saw the drift of Socialism and made a bid for the Socialist vote for his party. He was only a little ahead of the Democratic National Convention of 1904. Socialism will get into the Democratic national platform then, but not enough of it can be accepted to divert many votes from the regular Socialist ticket which will be put up in that year. The Cleveland, Shepard, and Carlisle section of the Democracy will fight against the invasion of Socialism in the convention of 1904 as that element did against the incursion of populism and free silverism in 1896, but they will probably be beaten to a sufficient extent to send many of them over to the Republican side, as in that year and in 1900. There is not the faintest chance, however, that the Socialists will be satisfied with anything that the Democrats dare offer them in that year.

Josiah Quincy, the Massachusetts Democratic leader, said a year or two ago that the Democracy was naturally a radical party, and that it must grow progressively more and more radical in order to live. Radicalism in Quincy's State, in the shape of Socialism, polled 34,000 votes in 1902, more than 400,000 votes in the whole country in the same election, and this is only the beginning. The prospect is that triumphant radicalism, rejecting the concessions which the Democratic party will make to it in 1904, will have a party of its own in the field which will poll more than the 1,000,000 votes which General Weaver, the populist candidate of 1892, received. There is a disposition among a powerful element of the people to draw the lines between the so-called classes, and if this issue comes squarely up the stability of the republic will be put to a severer test even than confronted it when the stars and stripes fell on Sumter.

## Reform That Pays Its Way.

THE VALUE of a reform administration such as we are having in the city of New York, faultless though it may not be, is conspicuously shown in the comptroller's department, the financial gateway of the city, through which every year an aggregate of about a hundred million dollars must pass in receipts and disbursements. The city has never had a more watchful comptroller than Mr. Grout. He is as honest as he is watchful, and as courageous as he is honest.

We observe that the comptroller was the first and apparently the only prominent public man in this city to call attention to the possible illegality, not to say inexpediency, of the resolution rushed through the Board of Aldermen, in a moment of hasty indiscretion, to appropriate a hundred thousand dollars of the city's funds for the purchase of coal for the city's poor. This recalls the

frenzied haste with which Congress appropriated several million dollars for the victims of the Mont Pelée disaster, only to discover subsequently that the money was not required; in fact, some of the provisions and clothing sent over to the sufferers were never distributed, because they were not needed. The charities associations of New York have pointed out that not money but coal is required by the poor, and that even persons who have money are unable to purchase fuel, simply because it has not been mined and shipped in sufficient quantities since the close of the strike.

In little things as well as in large ones, however, Comptroller Grout and Corporation Counsel Rives are keeping a watchful eye on the city's income and outgo. In the trifling matter of the tax of fifty dollars a year, levied on the street cars of New York, Mr. Grout discovers that by a system of annual averages, in computing the number of cars, the transportation companies have been evading two-thirds of the taxes which should have been properly levied upon them. Instead of paying twenty-five thousand dollars a year, as they did in 1901, the city expects to collect about seventy-five thousand dollars for the year just closing. This may look like a small matter, but the city of New York has been suffering more from a multitude of small leaks than it has from a very few large ones. The latter have been so conspicuous that the remedy has been easily applied, while the former have been permitted to go on in every direction until their aggregate constitutes a formidable total.

Before the verdict on our reform administration is rendered, the people should have placed before them, in concrete form, the simple facts and figures showing the accomplishments of the various departments in the way of economies, retrenchment, and improved public service. This course will be the best campaign document for the next municipal election, and it should be the only one really necessary.

## Sixty Millions More in Wages.

THE RECENT voluntary advance averaging ten per cent. made in the wages of employés by leading railroad companies is one of the most remarkable occurrences on record in the business world. Additional importance is given to it by indications that a similar step will yet be taken by all the remaining roads in the country. Whether this move be a strategic one with the object of averting a general strike, or whether it be born of a sincere desire to share fully with the workmen the fruits of prosperity, its significance is signal. The action of the employers, so widespread and on so large a scale, has had no precedent. Few individual firms, even, have ever been known to raise the compensation of labor except under more or less open pressure. The railroad men on all the big systems have had much extra work put upon them by the growth of traffic, their living expenses have been increased with the rise in prices of the staple necessities, and they should undoubtedly be allowed a higher rate of pay. But that they received it without the usual formality of presented grievances and demands more or less threatening is a wonderful thing, betokening wisdom and fairness on the part of the railway managers, and possibly the dawn of a new era in industrial relations.

The railroads which have been foremost or among the earliest in advancing wages are: The New York Central, Pennsylvania, Erie, Illinois Central, Missouri Pacific, Union Pacific, Southern Pacific, Wabash, Denver and Rio Grande, Rio Grande Western, Reading, Lake Shore, Cleveland, Cincinnati, Chicago and St. Louis, St. Louis and Southwestern, Delaware, Lackawanna, and Western, Texas Pacific, Southern Railway, Wheeling and Lake Erie, and Pittsburg and Lake Erie. It is estimated that the aggregate of the annual wage increases on these lines alone will be \$25,000,000, and that when all the returns are in it will be found that the railroads of the Union have agreed to give their employés about \$60,000,000 per year more than the latter have been receiving. This calculation is based on figures in the annual report of the interstate commerce commission for 1901. In that year the total compensation paid to the 1,071,169 men employed by the railroads was \$610,713,701, and ten per cent. of this would be more than \$61,000,000, but the highest-salaried employés are not to participate in the general advance of pay. This is an immense sum to be added to the operating expenses of the iron highways, and it is not strange that the stockholders have been considerably concerned over the possible effect on their incomes.

There would appear, however, to be no sound reason for alarm on the part of owners of railway securities merely because of the wages question. Although the railroads paid in 1900 dividends totaling \$139,597,972, there was left a surplus of \$87,657,933, which was an increase of \$34,593,056 over the previous year. According to the report of the interstate commerce commission, just issued, the net earnings of the roads were \$33,462,899 greater in 1901 than in 1900, and the dividends declared amounted to \$156,746,536, bettering the previous year by more than \$17,000,000. The surplus for 1901 was \$84,764,782, a decline from the previous year, but explained by the charging of improvements to income. Even this decreased surplus would not be absorbed by the increase in the outlay for labor. Moreover, even on the basis of the old rates, increases of earnings were reported in October and November that would, if continued, have been sufficient to meet the new expenditure, and thus avert any cut in dividends. But the railroad authorities have made doubly sure of the maintenance of earnings and dividends by materially advancing freight rates on various classes of goods. It is therefore probable that, in spite of the financial concessions made to the workmen, the existing rates will produce a larger total of net

earnings and a bigger grand surplus, unless prosperous conditions of business generally should severely decline in 1903.

## The Plain Truth.

AN ECHO of the voice of President McKinley rings out in the remarkably effective address delivered at the close of the three days' session of the Civic Federation in New York by Senator Hanna, the hard-headed statesman from Ohio. The Senator's notable part in the great movement now attracting such general attention in this country, looking toward a better understanding between labor and capital, will constitute a conspicuous page in the history of what may become the great struggle of the new century, and it is not too early to say that the part he is playing will be conceded by all to have been statesmanlike, wise, and timely. In his closing remarks at the recent session, Senator Hanna predicted that the best solution of labor difficulties would be found in industrial agreements, based on intelligent consideration of all questions in dispute. He found every reason to believe that, under the influence, inspiration, and encouragement of such organizations as the Civic Federation, public opinion would be led in the right direction, and that the power to settle all labor differences, outside of law-making, coercion, and undue influences, would finally be lodged in friendly conferences between employer and employé, whenever both were animated with the single desire to do that which was best for all concerned. Senator Hanna's eloquent defense of the integrity of purpose of the Civic Federation is abundantly justified.

IT IS decidedly amusing to find the suggestion in the New York Herald, Times, and World, that if the Board of Aldermen of this city refused to grant a tunnel franchise to the Pennsylvania Railroad an appeal could be made to the Legislature at Albany for the passage of a bill transferring the power of the Board of Aldermen to some other local authority. Is it possible that these stalwart advocates of home rule for New York City, these bitter critics of the "hayseed" legislators of Albany, whom they have so often denounced for alleged interference with the municipal matters of our great city, thought of looking to Albany for relief from the intolerable conditions which home rule had imposed upon greater New York? These newspapers have been foremost in denouncing the proposition to substitute a decent State constabulary for Tammany's demoralized and debauched police force. They have said again and again that New York was able to get along without the interference of rural legislators, in spite of the fact, which the record proves, that no good bill for this city has ever been passed without the direct aid and support of rural legislators, and that every bad bill for New York City which has ever been defeated has owed its defeat not to the bar-keeper legislators sent to Albany from New York by Tammany Hall, but to the men of sterling character who have been sent to the State capital from the rural districts. In all the annals of so-called municipal reform there has been no greater fraud and fake than the outcry against the country members of the Legislature for alleged interference with home rule in New York. How long will it take the people of this great city and its representative newspapers to comprehend the fact that home rule, in a city like this, whenever it is controlled and dominated by the abhorrent forces of Tammany Hall, means only misrule, debauchery, blackmail, and plunder. If decent citizens had not the opportunity and the right to appeal to the Legislature for relief, this condition would be intolerable. "Home rule" has become a cover for Tammany's misdeeds.

WE DOUBT if the death of any other American not in public life could have caused a greater shock than was occasioned by the sudden announcement of the death of ex-Speaker Reed. So conservative an authority as ex-Governor Black classed Mr. Reed as the foremost of American statesmen since the death of the late President Harrison. The late speaker was so self-contained, so little given to posing before the public, so conscious of his own strength of character, so resolute and true, that he was one of the few men in the public eye to whom publicity in the sense of popular notoriety was really offensive. He was a great parliamentarian, a broad-minded statesman, a scholar, a man of ready wit, and had courage sufficient for every emergency. But he had that rarest of all qualities which so many public officials in high places lack—that of discernment, the power to weigh the present in the scales of the future and to obtain a correct estimate of what present action would be worth when the final measurements were taken. If there is one fault more glaring than another, with so-called American statesmen, it is that of testing everything by the rule of expediency. "How many votes will it bring at the next election?" seems to be the question forever in their minds. With Mr. Reed, the first question was as to the consequences to the nation of any action that might be proposed. What would the consequences be now and hereafter? How would it affect not only party policies but national honor, growth, and power? Mr. Reed was the strongest kind of a stalwart party man, and he was the greater leader because he never subordinated the welfare of the government to his own desire for party success and political control. Those who realized the high standards of the ex-speaker as well as his wonderful equipment for public service, preferred him to any other in the councils of the Republican party, as a presidential candidate, and a few years ago his name was quietly and earnestly brought forward. That was not the time for Mr. Reed, but had he lived in health and strength, his time for the first honors of a Republican National Convention would have come.

## PEOPLE TALKED ABOUT

THE PROSPECTIVE election of Reed Smoot by the Legislature of Utah to the United States Senate has

REED SMOOT,  
A Mormon apostle who may be elected  
United States Senator.  
For & Smoot.

stirred up a commotion which is, on a smaller scale, like the angry storm that raged over Brigham H. Roberts, the polygamist who was excluded from the national House of Representatives. Mr. Smoot is a member of the apostolate, the supreme body, consisting of a president and twelve apostles, which rules the Mormon Church. As such his candidacy is strongly opposed by the "Gentile" element and notably by the Salt Lake Ministerial Association. This organization has adopted vigorous resolutions objecting to the choice of Mr. Smoot as Senator on the grounds that he is an apostle and would act under the dictation of his associates; that his selection would be a union of church and state, and that the majority of the governors of the Mormon Church with whom he co-operates and whose conduct he condones are living in polygamous relations. Mr. Smoot has asserted his own innocence of the practice of polygamy, and his mere prominence as a Mormon leader and official will hardly induce the Senate to exclude him should he be elected, as he will be except in the unlikely event of a yielding to adverse public opinion by the Mormon priesthood, which controls the requisite votes. But unless the charge that the Mormon magnates still sanction plural marriage can be thoroughly disproved, Mr. Smoot, as their representative, will be seriously handicapped in his position as Senator. Mormonism and its servants can never hope to win even bare respect so long as they are suspected of being organized foes of morality and violators of the laws of the land.

THE ITALIAN government has a graceful way of recognizing the interest shown by foreigners in Italy and her history.

ASHTON R. WILLARD,  
American decorated by the Italian government,  
and his little daughter. — Chase.

Recently two Bostonians were decorated by the Italian ambassador to the United States, Signor des Planches, with the Order of the Crown of Italy as a token of appreciation of works written by them on subjects pertaining to the kingdom. The two men thus made chevaliers of the order were William Roscoe Thayer, author of "The Dawn of Italian Independence," and Ashton R. Willard, author of "History of Modern Italian Art." Mr. Willard is a native of Vermont, having been born in Montpelier, but he has spent much of his life in Massachusetts and abroad. He is well known in political circles in the Bay State, having served for years as secretary to the speaker of the Massachusetts House of Representatives, and having in that position come in contact with many public men. He retired from the secretaryship to take up literary work, and has produced two volumes of much merit besides the one whose title has been given. He has traveled extensively and has collected valuable art treasures as well as literary material. He resides on Commonwealth Avenue, is a prominent member of Boston's leading Italian society, and is deeply interested in all matters concerning Italy.

EMPEROR WILLIAM, of Germany, is a man of opinions, as the world has long since learned. It has learned also that his opinions generally are founded on sound sense, refined taste, and good judgment. This holds true as to the views recently expressed by the Emperor on the nature and influence of music, the occasion being the inauguration of a new school of graphic arts and music in Berlin. "You know," said the Emperor, "what a great educational influence I ascribe to music and its cultivation. It is, above all, to be considered in its influence on the temperament and on the entire soul-life. Music enlivenes, elevates, and forms the soul."

THE AMERICAN invasion of Europe bids fair to go on until citizens of this country shall have important business interests in all parts of the continent, as well as

in Great Britain, where they have already obtained a solid foothold. Everybody knows of the large enterprises in which moneyed magnates from this side of the sea have engaged in London, and now the French capital has surrendered to our progressive promoters. An American syndicate has just secured from the Paris Council an exclusive contract for the lighting of that city, winning out against the sharp opposition of French financiers. The syndicate is to absorb all the gas and electric-light companies of the great town, and will employ a capitalization of \$50,000,000. Its plan is to organize two companies, one under the laws of France to operate the works, and the other in the United States to hold the securities of the former, and thus throw the protection of American laws over the enterprise. Two of the ablest and most successful of American financiers, Mr. Anthony N. Brady, of Albany, N. Y., and Mr. William C. Whitney, of New York City, the eminently successful promoter of large enterprises, are the leaders in this big undertaking, and it was through their diplomatic ability that the award of the contract was obtained from the council. It need hardly be said that these expert managers will see to it that the

WILLIAM C. WHITNEY AND ANTHONY N. BRADY.  
Who have secured a contract for lighting Paris.

most advanced methods in the production of light are introduced, and that under their auspices the illumination of Paris will excel all previous records.

THE KING of the Belgians is determined to travel comfortably by rail, and so has just had a new car built which is said to be the most luxurious so far constructed. The car contains a kitchen, the King's dressing-room, the King's bed-room, and, in the centre of the car, his sitting-room. Then come the dressing-room and bedroom of the Princess Clementine, his daughter, and beyond them two rooms and a dressing-room for the suite. Thus does Belgium's progressive monarch vie at last with the great American railway magnates.

THERE SEEMS to have been much "swinging around the circle" among European royalties during the twelvemonth now past, a manifestation of neighborly feeling among these wearers of crowns which we may fairly construe as making for peace among the nations over which they rule, since men and women who have just eaten each other's "salt" can hardly be thinking or planning for mutual destruction. Perhaps no one of these royal visitations has occasioned more interesting speculation than the one recently made by Crown Prince Frederick of Denmark upon Emperor William of Germany. It will be remembered that the Danish people have had very much the same feeling toward Germany over the loss of Schleswig-Holstein that the French have had over the German seizure of Alsace-Lorraine, and the roots of bitterness have seemed to be almost as deep in one case as in the other. It is this state of feeling that gives special significance to the statement of the *Koelnische Zeitung*, which, in wishing welcome to the crown prince of Denmark, says, not without satisfaction, that the anti-German movement in Denmark has diminished; that a new generation has come into power which has not been raised amid the traditions of the old sadness, but which, more conscious of its own interests, intends to live

CROWN PRINCE FREDERICK AND CROWN PRINCESS LOUISE,  
of the Kingdom of Denmark, which has become reconciled with Germany.

at peace with Germany. Replying to the rumor that has been circulated, that the journey of the prince aims at preparing an alliance between Denmark and Germany, the great Rhenish journal declares that it does not believe any of this, and that the situation does not require any political understanding of this sort.

THAT WAS a unique scene attending the reception of President Roosevelt in Memphis, Tenn., November

REV. J. E. RANKIN, D.D.,  
Author of hymns, "God be with you,"  
and other verse.  
Bishop.

19th, when three thousand people, many of them colored, united in singing the world-famous hymn, "God be with you till we meet again," by the Rev. Jeremiah E. Rankin, D.D., now president of Howard University, Washington, an institution for colored people. Such popular, spontaneous open-air singing is rare. It recalls a similar scene at the reception of Prince Henry, of Germany, in Nashville, Tenn. The etymology of goodbye is "God be with you," and this fact induced Dr. Rankin to write his hymn when he was pastor of the First Congregational church in Washington. He sent the first stanza to two composers, one being J. W. Bischoff, Mus. D., the blind organist of his church, and adopted the tune which Dr. Bischoff composed. His church occasionally sang the hymn. The Methodists at Ocean Grove were the first to glorify it. They sang it five times in one day, at the close of five different assemblies. Dr. Rankin has copies of it in the Italian, German, Welsh, and Chinese languages. "Scarcely a week occurs," he says, "when I do not hear from some one, by letter, of its popularity or usefulness." It has been adopted as the parting hymn of the Woman's Christian Temperance Union and of the Young People's Society of Christian Endeavor. An obscure composer, William Gould Tomer, of High Bridge, N. J., composed the music, now so famous. The hymn is the modern doxology of the Protestant churches, though not in the literal meaning of the word. It is the closing hymn of innumerable Christian assemblies. Dr. Rankin has written several hymns that have come into common use.

FIFTY YEARS of getting on the right side of public questions, fifty years of trying to please everybody

worth pleasing, fifty years of struggling with office-boys who are always somewhere else when wanted most, with composers who know better than you do what you want to say, with foremen smitten with frequent ambitions to boss the whole job; fifty years of weary warfare with delinquent subscribers and cranky advertisers — to live fifty such years and come out whole and sound in mind and body is, indeed, an achievement worthy of remark even in this day of many remarkable things. Particularly is this the case when an editor survives the fifty years not only *mens sana in sano corpore*, but with a disposition as happy and a wit as fresh and nimble as that which characterizes Mr. A. O. Bunnell, editor of the *Danville (N. Y.) Advertiser*, who has recently celebrated the golden jubilee of his *entrée* into a printing-shop. As an editor, Mr. Bunnell set his standard high at the beginning and has maintained an even and consistent course through all the trials and besetments of fifty crowded and eventful years, his paper being to-day, as always, a model of its class in dignity, independence, courageous utterance, and intelligent, progressive, and inspiring leadership. In addition to the good and valuable service he has rendered to his fellow-men in his editorial capacity, and in numerous other ways as well, Mr. Bunnell has won a high place in the affectionate regard of his fellow-craftsmen by his activity in the press association of his own State and also in the national press organization, so that for an American newspaper man not to know him is to argue himself very much unknown, and to know him and not to love him is to be a pretty tough case indeed. Mr. Bunnell was one of the founders of the New York State Editorial Association, now in its forty-sixth year, has been its secretary and treasurer all this time, and has, we believe, missed none of its annual gatherings. In fact, the genial presence of Secretary Bunnell so cheers, brightens, enlivens, mixes-up-with, and otherwise pervades these yearly conferences of the editorial fraternity of the Empire State that for the association to hold a meeting without him is simply unthinkable. Far distant be the day when such a thing must be reckoned among the possibilities!

MR. A. O. BUNNELL,  
Printer, editor and publisher for fifty years,  
the Nestor of his craft.

# Finest Poor Children's Home in the World

By John Matthews

IN THE suburban district of New York City is a stone edifice so symmetrical, so substantially and elegantly built, that it is suggestive of an art gallery or the house of a wealthy club. The guest ascends a broad stairway of stone and crosses a mosaic floor before he reaches the spacious front entrance. The doors before him are massive oak and heavy cut glass. And there is nothing in these to contradict the first impression of the art gallery or the wealthy club. But when the visitor enters the main front hall, the sound of little hurrying feet and the laughter and shouts of children come to his ears, and he catches a glimpse of small figures arrayed in checked aprons. Then he begins to realize that he is in an institution for the care of children. And so he is. For this is the finest and most complete and elaborate children's home in the world. So handsome is the building and so costly and elegant its equipment that it seems almost to be an extravagance of philanthropy.

If *Oliver Twist* had been led, without previous warning, into this, the new Home for the Friendless of the American Female Guardian Society, the shock of astonishment would, I am certain, have been dangerous. The building has not been finished long and was only recently opened. For half a century the society carried on the same work in a place much nearer the heart of the city. *Oliver Twist* would have been surprised to know that the new structure and the ground on which it stands cost \$263,000. He would have been thoroughly impressed by its imposing, massive style, for the house is made of stone, iron, oak, and concrete, and is as free from danger by fire as a modern office structure. Among those who have liberally contributed to this institution is Miss Helen Gould, and she is a visitor there at least four times every week. Miss Gould gave \$20,000 toward the cost of the building and has provided some of the interior furnishings.

After *Oliver* had recovered from the splendor which would meet him on his entrance—the thick rugs on the floor, the green balusters of decorative iron, the marble stairs—he would have been interested next, I am certain, in the dining-room. Here he would have found plenty to eat. One of the little boys at the long table would no doubt have told *Oliver*, as the little boy told me, that on Thanksgiving Day he had eaten two plates of turkey and two dishes of cranberry sauce. This, I am afraid, would have been even a more dangerous shock to *Oliver* than the first, for to obtain "more" in the domain

of Mr. Bumble was a thing to be undertaken only under the most desperate conditions. While at the Home for the Friendless, young *Twist* would have noticed occasionally little boys and girls in the dining-room eagerly lifting their right hands. Then he would have seen one of the women who were waiting on them walk away to the kitchen and return with a fresh supply of that which was the central dish of the day's dinner. The signal for "more" in this home is the upraised hand. When a second slice of bread is wanted the child lifts the forefinger of the right hand. The women in waiting are kept busy answering signals. First it is a hand for "more," then it is a forefinger for bread. On three sides of this broad dining-room *Oliver* would have observed large windows, filling the room with light. And as he went through that wonderful place he would have found that all the main bedrooms were, like the dining-room, bordered on three sides with broad windows for abundant light and ventilation. He would have seen that the one hundred and sixty children who live in this home sleep in white beds that are decorated with brass. Between these rows of beds are soft, thick carpets for the comfort of little bare feet. In the play-room *Oliver* would certainly have been completely bewildered. Toys there are in abundance and of all kinds for babies and little boys and girls who play on the carpeted floor. The young guest from the book of Mr. Dickens would have delighted in the melody of a large music-box, the gift of Miss Gould; but before the phonograph, from the same generous source, *Oliver* would, I am sure, have been stunned with awe.

If the day were warm and he and his companions wished to run out of doors there is a beautiful little park near by, owned by the city, and smiling an invitation. At another side of the building is a bit of free, rugged, uncultivated, wooded land. And the children who would crowd about *Oliver* to see him, as he walked about in a haze of wonder, would, with a few exceptions, be chubby-cheeked and healthy. The exceptions would be the latest arrivals, who had not yet had time to improve under the benefits of the good system of the home. For the recruits to this little garrison are from the poorest sections of the great city. Many of them are "charity society" or "Gerry society" cases. In other words they are children who have been starved or neglected or otherwise cruelly treated by their parents or others, and who

have been found by the inspectors of these two organizations. Others are orphans, and still others are children whose parents are so poor that they cannot afford to care for them properly, but send them to board at the Home of the Friendless at one dollar a week. All the advantages of the public schools are given to these children. There are in the building class-rooms, a kindergarten, and a manual-training workshop; and during the school days of the week four teachers instruct the children in the regular public-school course.

We do not expect children gathered together in any institution, no matter how fine or carefully conducted, to have all the happiness of the little one with mother and father in the home of love and plenty. For the happy family is the natural way and the best way. But the contrast is striking between the places of starvation, cruelty and squalor, from which the inmates have been rescued, and their present life of cleanliness, regularity, and good care.

Much of the furniture, toys, and other equipment of the institution have been given by New York persons in memory of their children who have died. Other gifts have been made by philanthropists. The society, having only the beginning of an endowment fund, is obliged to depend on gifts for the support of its home and other branches of its work.

From the gymnasium for boys under the roof to the kitchens in the basement, the same air of elegance is present. There are bath-rooms with tubs of porcelain, and wash-stands of the same white material, with sprays made for the scrubbing of small heads; and the floor is of fine tiling. I wonder what *Oliver* would have thought of this!

And not the least remarkable part of the institution are the unusual facilities for exit in the event of fire. The fire-escapes are broad exterior stairways extending at a gradual decline from the top story to the ground, instead of the usual narrow steps-like ladders.

The effect of this good environment on the children of the home is apparent. Rudeness and coarse language are exceptional. The boys speak politely and with the manner of young gentlemen. And these things are appreciated by the families in which they are afterward adopted, —for a part of the work of the society which conducts this remarkable institution is to find permanent homes for the homeless among its little charges.

## Concerning Mrs. Santa Claus

IT IS truly remarkable that during all the many years in which Santa Claus has been making the world a happier and sweeter place by his periodical visits, no particular concern should ever have been felt as to the welfare of Mrs. Santa Claus, the other, and perhaps the better, half of the old fellow, if anything could be better than he. It might go without saying that Santa Claus is a married man, that he has a good wife, and that there is somewhere a large and growing family of young Santa Clauses; for, according to the latest and most authentic "snap-shots" of the patron saint of childhood, he is a rotund, well-fed person with a countenance bespeaking joy, peace, and contentment of an exuberant kind, expressions possible only on the visage of a man who has a wife to light his kitchen fire in the morning, darn his socks promptly, see that his collar buttons are always where they ought to be, and whose domestic joys are rounded off by the presence of a heavy of little ones to be paregoricked occasionally, spanked at intervals of painful frequency, and loved devotedly all the time. To suppose that the Santa Claus of our childhood dreams and visions, the rubicund saint of our picture-books and folk-tales, is a person who eats cold meals when he gets home and finds no one there to dandle on his own knee when he sits by the fire at night, is to set at naught all that the world knows and feels as to the delights and satisfactions of fatherhood and the marks it leaves on a man's physiognomy.

We will therefore take it for granted that there is a Mrs. Santa Claus, a baby Santa Claus, and as many as seven or eight other young Santa Clauses of various ages and sizes. This being granted, it must follow as naturally as day follows night, that Mrs. Santa Claus takes a warm and lively interest in the benevolent business of her excellent husband, as all good wives do; and should Santa Claus's biography ever be written up, and the whole truth come out concerning his domestic relations, we would not be surprised if it should appear that it was Mrs. Santa Claus who first "set him up" to the whole reindeer-sleigh, stocking-filling, chimney-descending, joy-bringing trade; who selected his gifts for him at some polar department store, packed 'em up for transportation, and told him just where to go first and "not forget." That's the way it is with most men who do any good in this world. Their wives seldom get the credit for it until they die and some one publishes the family diary.

But while we are on this subject it may be as well to get down to some real facts and state that there is one country in the world where Mrs. Santa Claus has really been honored with a habitation and a name, and that country is Italy. She is known among the Italian children as La Befana, and they pay scarcely less homage to her than the children of other lands do to Kris Kringle himself.

We are indebted to a writer in the London *Express*

for a description of La Befana, or Mrs. Santa Claus, and how she came into being. She is said to have been the

### The Football Hero

FROM the jaws of the jungles of Jayville the Jaeger hiked out of his lair. The barn-broth breathed halm from his bootlets, the hay-germs had homes in his hair. His mouth hung ajar like a fly-trap, each hand was as big as a team. His freckles a leopard-like legion, his verdancy far from a sham. His clothes were those mother had made him, his mop had been mowed 'round a crock. Each wilted congressional gaiter was rimmed with a wadded sock. When Reuben strayed in with his satchel, and eyes you could stare with a rope, A "ha-ha" arose from the campus that strangled the last his hope.

BUT Reuben was big—he was husky; his legs were like saplings of oak. His arms were like steel, and he'd often made two-year-olds steer like a joke. His back was the back of a Samson—gnarled, knotted, and hard as a rock. His neck would have served as a bumper to ward off a switch-engine's shock. His unpadded shoulders were hillocks of sinew and muscle and bone. His chest was a human Gibraltar, his voice had a Vulcanoid tone. His prowess had never been tested quite up to its limit, at home. Although he had romped with the yearlings and guided a plow through the loam.

THE boss of the 'even was speechless when Rusticus loomed on the scene. What mattered the fact he was shabby? What mattered the fact he was green? Could ever a team get a line-up 't would stand for a centre like that? The ranks of the foe would vanish ere one could articulate "Seas!" He rushed to the Reuben and nailed him, and led him away to a room. Where trainers and rubbers proceeded to marvel and fondle and groom. And when, at the close of a fortnight, the wonder was trotted to sight, The grand-stand and bleachers went daffy and howled themselves hoarse with delight.

WHAT next? Ask the worried kodaker who skinned him in vain for a shot! The Reuben-led phalanx proceeded to score, with a loose-jointed trot. The foe faded fast as a snowflake in Tophet's most tropical pit. While Rusticus romped through the rout like a mastodon having a fit. And when all the team that opposed him lay mangled and dead on the field, The mob went as mad as a Mullah, and hooted and bellowed and squealed. Then Rusticus, bordered with lasses who called him a hero and prince, Pranced off with his halo of glory, and hasn't been worth a cuss since.

S. W. GILLMAN.

woman who, when it was known that the Three Wise Men of the Scriptural story were about to pass by her house, scornfully refused to go to her window to salute them, and to wish them a blessing. Ever since then she has been repenting of her evil ways. Part of her repentance is manifested in benevolence to little children. All through the year she fills up her spare time in preparing presents in wonderful variety, intended only for really good little children, of whom she is a sort of patron saint, corresponding with the German St. Nikolaus, celebrated under his popularly abbreviated cognomen of Santa Claus. La Befana is supposed to be ugly simply because she is so very venerable, being nearly 2,000 years old. She brings dolls, trumpets, little watches, all sorts of confectionery, and curious cakes, marbles, and toys. The reason why this happens on the twelfth day after Christmas is simple enough, and is perfectly consistent with the pretty myth.

The day is Epiphany, consecrated by the church to the memory of the Magi. It is the date on which they are reckoned to have presented their gifts of gold, frankincense, and myrrh to the Holy Child. And as La Befana is associated with them, so she is sure to fulfill her kindly office on Epiphany eve. Thus the festival of January 6th, called by the church Epiphany, is by the masses of the people, especially by the children, known as La Befana.

But how is it that La Befana is regarded as the wife of Santa Claus? The answer to this query gives a curious sample of the way in which by accretion a legend comes to be enlarged. Originally the boys and girls of Italy knew nothing of any Santa Claus. He was not in any sense an Italian patron saint. Familiar only with La Befana, they had no legendary Santa Claus, with snow-covered cap, furs, and bells, coming down the chimney to fill their stockings with long-desired gifts. But as an idea of foreign and modern importation, the tradition of this northern friend to children is gradually becoming Italian.

There are in Italy thousands of Anglo-Italian, Austro-Italian, Swiss-Italian, German-Italian, and American-Italian families. No nation has taken more cordially to foreign matrimonial alliances than the Italian people. The children in these households regard Santa Claus and La Befana as husband and wife. They often, when they have been very good, receive visits from both. The doctrine in their minds is that Santa Claus finds the warm climate of Italy unregimental; and that for the most of the year he lives in the frozen north, but that his wife prefers the sunny south, and seldom visits the cold northern lands. Roman children receive no gifts on Christmas Day. For these they have to wait a fortnight, till La Befana comes at the happy Epiphany.

HEALTH means strength. Abbott's, the Original Angostura Bitters, means health. At druggists' and grocers'.

# Weird "Calcium-light Night" at Yale

By C. J. Waddell

QUEERLY-ROBED MEMBERS OF ALPHA DELTA PHI FRATERNITY LEAVING THEIR HALL AT NEW HAVEN FOR THE CAMPUS.—Leopold.

THE ANNUAL calcium-light celebration of the junior fraternities at Yale was held on a recent Tuesday evening. On this night the members of the four Greek-letter fraternities—Alpha Delta Phi, Psi Upsilon, Delta Kappa Epsilon and Zeta Psi—informed their respective candidates of their election. The ceremony attending the notification is one of the weird events in the college calendar,—with cowl-robed figures marching in sombre lines lighted by Greek fire and calcium lights borne upon the shoulders of four college "sweepers" at the end of each procession.

The members of the fraternities assemble at their society halls on the evening of "Calcium-light Night" and so time their march to the campus that they reach it as the clock on Battell Chapel strikes nine o'clock. At the first ring of the chapel chimes, the members of Delta Kappa Epsilon appear from behind Dwight Hall; Alpha Delta Phi through the Pass of Thermopylae between Battell Chapel and Durfee Hall; Psi Upsilon at the north end of the campus between Durfee Hall and Alumni Hall, and Zeta Psi at the south side of Dwight Hall. Each society is robed in its colors, with a society emblem or chapter letter on the backs of the gowns; D. K. E., in red; A. D. Phi, in green; Psi U., in white, and Zeta Psi in purple; and the members in double file carry brightly burning torches of Greek fire of the respective colors.

Over the heads of the columns are cast the glaring beams of light from the calcium lights; for no picturesque detail which will add to the effectiveness of the scene is omitted. As these bands march through the hundreds of spectators who gather on the campus, the fraternity marching songs are sung with a vigor which is far too strenuous to suggest any chant which might be more in keeping with the solemnity of the occasion. The college man thrives on competition, and on this evening it is the aim of each fraternity to surpass in the vocal part of the programme whenever the bands meet or pass.

Twenty men are elected to each of the junior fraternities in the fall of their sophomore year, and on "Calcium-light Night" the chosen candidates have been instructed to meet in groups of four in designated dormitory rooms. There the members find the object of the ceremony—the formal notification and congratulation of the sophomores; and with this accomplished the bands return to their society halls, where the formal initiations occur one week later.

Every college custom has come to its present form through a gradual process, as conditions or the faculty has required. In the case of the evolution of the "Calcium-light" celebration the faculty has been a not unimportant factor, for tradition has it that in "the old

days" Bacchus intruded and was welcomed among the more solemn and appropriate divinities. The first of the three stages in this evolution ended about 1870. Prior to that date the members of the fraternities were neither costumed nor illuminated on their march to the notification of the candidates; nor were society songs sung save upon arriving at the rooms of the sophomores. Immediately after the formal notification of election and congratulation, solemnity vanished before a "spread" provided by each sophomore and consisting of fruits, cake, wine, and cigars. The bands then sallied forth to further notifications and "spreads," and as the ceremony progressed it became increasingly hilarious, until the finale came in the gatherings of the candidates to celebrate their good fortune. The degeneration of the ceremony into a brawl resulted in the elimination of the "spreads" through faculty restriction.

There then followed the era of costumes, which were grotesque masterpieces of the costumer's art and student ingenuity. A popular weapon was a stuffed cloth club, and in the frequent scrimmages between the societies, hats were considered the vulnerable points. Such celebrations were fantastic, but within the bounds of propriety. Of late years both the spreads and the physical encounters have disappeared—to the gain of "Calcium-light Night."

## Cripples Hoping for Help from a Famous Surgeon

By Harry Beardsley

THE VISIT of Dr. Adolf Lorenz, the famous surgeon of Vienna, to the United States is like the coming of a prophet. Thousands of mothers and fathers have carried their maimed and crippled children many miles that they might be healed by this eminent surgeon. These pilgrims have arisen in the cities which Dr. Lorenz has visited until in New York alone more than 2,000 deformed ones were presented to be cured, and the pilgrimage began a month before the doctor's arrival. These people suffered from a great variety of afflictions. Some were paralyzed; some were hunchbacks; some had lamed arms or legs; some suffered even from chronic diseases of the skin. Many were carried in the arms of their mothers; others swung their bodies between crutches; some hobbled along with a shrunken leg in a shield of steel; some wore their heads in a frame-work like a cage. There was never before such an outpouring of the lame and halt; for the news of the coming of the famous Dr. Lorenz seemed to have penetrated into every village and hamlet and into every city tenement-house.

It brought from their hiding-places many misshapen little ones who had before the coming of the noted surgeon been neglected. Those who have seen most of sickness among the city's poor say that in many homes where there is poverty and ignorance the crippled child is considered a disgrace, almost a curse. It is hidden by its parents from those who would give it aid. It is secreted

sections of the State. One poor man living in Buffalo took his little paralyzed boy to the metropolis five weeks before the arrival of Dr. Lorenz so as to be certain not to be too late. Of all who were brought and examined at the Cornell University Medical College dispensary in New York only those afflicted with what is called congenital dislocation of the hip were selected for the exhibition by the Vienna surgeon of the bloodless operation which he has perfected.

The congenital dislocation is one with which the child is born and is most difficult to correct. In such cases the socket in which the large bone of the thigh should rest is imperfectly formed, so that the upper end of this bone which is the top of the leg is free within the muscles. The socket in which this bone should rest is called the acetabulum and the name of the bone is the femur. By loosening the muscles and ligaments of the leg and thigh, Dr. Lorenz forces the end of the femur into the acetabulum and then holds it there by a plaster cast. The patient is then, after the operation, able to walk and run about like other children, and the weight and pounding on the end of the leg drives the femur constantly into the acetabulum until at last the latter is deepened and a proper socket is formed; the cast is then removed, and the child is cured. This, in brief, is the effect of the operation. There are many complications which sometimes render this operation impossible, and it cannot be effected if

these cases receive attention there is little opportunity for patients to receive the care they should have. Many patients are discharged before they are cured, in order to make room for others. The result is that they are again injured or there is a relapse and their deformity appears again, and the operation and the treatment in the hospital has availed nothing. It is necessary sometimes that these cases remain in the hospital for a year or more. That there should be provision so that this could be done is apparent. The very absence of such provision in the State of New York has been emphasized by the outpouring of cripples for the treatment of the great surgeon from Austria.

The question at once arose: What is to become of all the hundreds of unfortunate ones who could not even be seen by Dr. Lorenz? It is probable that a bill will be presented at the next session of the New York Legislature calling for an appropriation to enlarge and increase the facilities of the New York State hospital for the care of crippled and deformed children, a new institution established during the administration of Theodore Roosevelt as Governor of New York, and located at Tarrytown-on-the-Hudson. This institution has only twenty-five beds, all occupied, and a waiting list of two hundred applicants. Here it is proposed to care for those indigent crippled children who can be cured until there is no longer any danger in their mingling with the other children of their

ANXIOUS WOMEN WITH CRIPPLED CHILDREN IN THE WAITING-ROOM OF THE CORNELL MEDICAL DISPENSARY.—*Lucky*.

PARENTS PREPARING THE LITTLE ONES FOR THE PRELIMINARY EXAMINATION BY THE CORNELL MEDICAL COLLEGE SURGEONS.—*Lucky*.

during the visit of a stranger. In confinement and neglect and poverty thousands of these little ones have suffered in the great cities. By the visit of this surgeon from Vienna these unfortunate ones have been brought into the light. In the crowded cities deformities in children are particularly frequent. In New York City it is estimated that there are 30,000 crippled children. The congestion of a large population in a small area is largely responsible for this great number. Children are thrown down by vehicles in the crowded streets; they are knocked about and injured by the multitudes on the sidewalks; they fall frequently down the long and narrow stairways of the tenements; they tumble to the pavements from the arms of the child-nurses, their elder sisters, and fall from tenement windows.

From all these sources have come a host of broken-limbed children; and besides these, are the many who are born with a deformity. It has been possible for Dr. Lorenz to treat only an insignificant number of these. The greatest benefit of his visit has not been the cures which he has made. The publicity given to his doings has been the means of calling attention to thousands who, had he never come to the United States, would have grown to manhood or womanhood, feeble and deformed, or would have died in suffering from their twisted bodies. To New York City the cripples were brought from different

the patient is too old, so that the tissues are hardened.

All of those selected for the surgeon's clinics in New York were photographed first by the x-ray machine at Bellevue Hospital. Then they were arranged, each patient with a brief description and the photograph, for Dr. Lorenz to make his own selection. The many who brought their children to receive the doctor's treatment and were of necessity disappointed will nevertheless be benefited by his coming. The name, address, and description of each case which came to the notice of the Cornell University medical dispensary were recorded, and Dr. Newton M. Shaffer, professor of orthopaedic surgery in the college and surgeon-in-chief of the New York State hospital for the care of crippled and deformed children, announced that at his own expense he would employ a nurse to visit each of those who had been applicants for the treatment of Dr. Lorenz, to make it certain that the neglect of the little cripples which had occurred before the visit of the Austrian surgeon should not continue after his departure.

The principal effect of the visit of Dr. Lorenz has been to call attention to the appalling number of deformed children, especially among the poor of New York City. It has called attention, too, to the inadequacy of the facilities for the free treatment of these little sufferers. In special hospitals and in departments of other hospitals where

own age. In order that their mental training shall not be neglected during their long period of confinement at the hospital it is proposed that a school be conducted in the institution with kindergarten and manual training. One teacher is employed there now with funds obtained by private subscription. Dr. Newton M. Shaffer, who has had charge of the reception and the clinic of Dr. Lorenz at the Cornell University Medical School in New York, and is the surgeon-in-chief of the State hospital for crippled children, was one of its founders, and is foremost among those who are interested in its progress.

Dr. Lorenz is six feet tall, and his great physical strength is invaluable to him in the performance of the operation for congenital dislocation of the hip. With his own great muscles it is necessary for the surgeon to overcome the stubborn muscular contraction of the patient's deformity. With little evidence of fatigue Dr. Lorenz goes through an amount of exertion that would completely exhaust the ordinary man. The Austrian surgeon is fifty-two years old, and a conspicuous feature is his long blond beard, which he tucks in his surgeon's apron while he is at work.

The operation which Dr. Lorenz performs has been known and practiced by American surgeons for several years. Usually after the hip joint of the patient is correctly set a plaster cast must be worn for about three

Drawn by Seymour M. Stone.

months. Lolita Armour, of Chicago, on whose account Dr. Lorenz visited the United States, will, it is said, be taken by her parents within that time to visit the surgeon at his home in Vienna. Charity has already been touched by the interest in the famous Austrian physician. One large sum of money was given by a philanthropist whose name was not announced, to aid Dr. Shaffer, of New York, in his work. Others whose names have not been published have undertaken the care of crippled children who have come within their notice. It has been announced that J. Ogden Armour, of Chicago, whose little daughter was cured by Dr. Lorenz, will found an institute in that city for the practice of bloodless surgery, to be endowed with \$3,000,000.

#### The Decision in the Samoan Case.

WHILE IT may be true that King Oscar's decision in the Samoan case, wherein he finds for Germany on every point, jars somewhat upon the American sense of right and justice, it would ill become us as a people to grumble over this adjustment, since we have been foremost in advocating arbitration as a method of settling international disputes, and should therefore take our

medicine like men, now that the dose has come our way. We may find some consolation in the remembrance that we have thus far generally been the winning party in these international lawsuits, from the time of the *Alabama* case down to that of the "Pious Fund" dispute recently settled by The Hague court. It would be unjust also to question the good faith of King Oscar or his desire to deal equitably in the matter. Without doubt there is no ruler of a State in the world to-day better qualified, by reason of character and experience, to act as the umpire in an international misunderstanding than Oscar of Sweden. He is justly loved and revered, not only in his own country, but also throughout the civilized world, for his many admirable qualities of mind and heart. He has never been suspected or accused of an overweening desire to cultivate the friendship of Germany, and there is no apparent reason why he should do so. His interests and sympathies in many directions lie more closely with England and the United States, with both of which countries he has always sustained the most cordial relations. If, therefore, it is our "ox" that happens to be "gored" by the Samoan decision, it is not for us to play the "baby act" and refuse to abide by the result. It will be better, no doubt, and more satisfactory all around, to refer such cases in the

future to The Hague court, which is regularly constituted for the trial of all international suits, and where the final decision does not rest with any single individual, but with a chosen group of specially qualified men.

#### Serious Indigestion.

CURED BY HORSFORD'S ACID PHOSPHATE.

It relieves immediately, and then gradually restores the stomach to perfect health. A permanent cure and a most excellent tonic. It relieves nausea.

#### In Substitute Feeding

for infants, physicians agree that cow's milk is the basis for all beginnings. What is required, then, is the best possible milk product. Borden's Eagle Brand Condensed Milk is ideal, pure, sterile, and guarded against contamination.

TELEPHONE Service is not used so often in the home as in the office, but its value in emergencies is great. Rates in Manhattan from \$48 a year. N. Y. Telephone Co.

# Christmas Customs, New and Old

By J. L. Harbour

PHLEGMATIC AS the German temperament is supposed to be,

it is said that we owe to it one of the merriest and happiest of customs, and that is the custom of the tree at Christmas time. It is a usage that shows no sign of dying out after the lapse of all the years since it was first established. Indeed, it would be a pity if so pretty and so joyful a custom should cease to exist. The heart of childhood all over the world would throb less happily at Christmas time if the Christmas-tree became a thing of the past. Readers of German traditions will remember that it is claimed that Martin Luther was the originator of the Christmas-tree. The story runs in this wise:

Martin Luther was on his way home from a journey one Christmas eve. It was a cloudless night and the Christmas stars were shining with great brilliancy. Their beautiful lustre was increased by the whiteness of the snow that covered the ground. Luther felt so impressed by the contrast between the starry heavens and the snow-covered earth that when he reached his home he began to tell his wife and children of the beauty of the night, of the seemingly unusual splendor of the heavens, and of the sparkle of the snow in the soft light of the moon and stars. He must have become quite wrought up over the scene, for a sudden inspiration came to him as he dwelt upon it, and he left the house and went into his garden, where he cut down a pretty little fir tree and surprised and delighted his children by dragging it into the house with him. Setting it up before the fire he fastened a number of candles upon it and lighted them. This, it is maintained by the Germans, was the beginning of the Christmas-tree in the world. One will find all over Germany rude prints representing Martin Luther and his family sitting around their Christmas-tree. It is certain that the Christmas-tree has been a part of the celebration of Christmas in Germany for centuries, but its widespread popularity in Germany did not begin until the beginning of the last century, when the custom of the Christmas-tree became universal throughout Germany, and other countries began to adopt it. If the German tradition is true, and there are records proving that it is true, we owe Martin Luther much for introducing into the world something that has been productive of so much happiness.

The use of evergreens at Christmas time is older than the Christmas-tree, the Christians seeming to have copied it from their pagan ancestors. In a very old book we find this reference to the use of evergreens at Christmas time: "Against the feast of Christmas every man's house, as also their parish churches, were decked with holme, ivie, bayes, and whatsoever the season of the year afforded to be green. The conduits and standards of the streets were likewise garnished: among the which I read that in the year 1411, by tempest of thunder and lightning, toward the morning of Candlemas Day, at the Leadenhall, in Cornhill, a standard of tree, being set up in the midst of the pavement, fast in the ground, nailed full of holme and ivie, for disport of Christmas to the people, was torne up and cast down by the malignant spirit (as was thought), and the stones of the pavement all about were cast in the streets and into divers houses, so that the people were sore aglast at the great tempest."

That indispensable dainty of the Christmas time, the mince pie, is also of very ancient origin. Ben Jonson refers to "minced-pye" in his "Masque of Christmas," published in the year 1616. In the *Gentleman's Magazine* for December, 1733, there is an essay on "Christmas Pye," in which the writer says:

"That this dish is most in vogue at this time of year, some think is owing to the barrenness of the season, and the scarcity of fruit and milk to make tarts, custards and other desserts, this being a compound that furnishes a dessert in itself. But I rather think it bears a religious kind of relation to the festivity from whence it takes its name. Our tables are always set out with the dish just at this time, and probably for the same reason that our tables are adorned with ivy. I am the more confirmed in this opinion from the zealous opposition it meets with from the Quakers, who distinguish their feasts by an heretical sort of pudding, known by their name, and inveigh against Christmas pye as an invention of the scurvy woman of Babylon, an hodge-podge of superstition, Popery, the devil, and all his works. The famous Bickerstaff rose up against such as would cut out the clergy from having any share in it. 'The Christmas Pye,' says he, 'is in its own nature a kind of consecrated cake, and a badge of distinction, and yet 'tis often forbidden to the Druid of the family. Strange! that a sirlon of beef, whether boiled or roasted, when entire, is exposed to his utmost depredations and incursions: but if minced into small pieces, and tossed up with plumbs and sugar, changes its property, and forsooth is meat for his master.' Thus with a becoming zeal he defends the chaplains of noblemen in particular, and the clergy in general, who it seems were debared, under pretense that a sweet tooth and liquorish palate are inconsistent with the sanctity of their character."

Plum porridge, or pudding, and the toothsome mince pie are both referred to in the following lines in Nedham's "History of the Rebellion," published in 1661:

"All plums the prophet's sons defy,  
And spire-broths are too hot;  
Treason's in a December pye,  
And death within the pot.  
Christmas, farewell; thy days I fear  
And merry days are done;  
So they may keep feasts all the year,  
Our Saviour shall have none.  
Gone are those golden days of yore,  
When Christmas was a high day;  
Whose sports we now shall see no more—  
'Tis turned into Good Friday."

One of the oldest and most beautiful customs of the Christmas time is the Christmas carol sung from house to house by Christmas carolers. In the early age of the church the bishops were wont to sing carols to the clergy on Christmas Day. There are Christmas carols on record nearly four hundred years old. The following carol is not that old, but it is of very ancient origin:

"Now thrice-welcome, Christmas, which brings us good cheer,  
Minced pie and plum-porridge, good ale and strong beer;  
With fig, goose, and capon, the best that may be,  
So well doth the weather and our stomachs agree.  
Observe how the chimney does smoke all about,  
The cooks are providing for dinner, no doubt,  
But those on whose tables no victuals appear,  
O may they keep Lent all the rest of the year!  
With holly and ivy so green and so gay,  
We deck up our houses as fresh as the day;  
With boys and rosemary, and lavender complaint,  
And every one now is a king in conceit.  
But for our mudgeons, who will not be free,  
I wish they may die on the three-legged tree."

The Christmas-box was at one time greatly in evidence—so much in evidence that it finally became an intolerable nuisance, and the people rose up in rebellion against it. At Christmas time hordes of boys and journeymen and apprentices crowded the shops and ran about the streets in certain parts of England begging coins for the small boxes they carried. One can readily imagine how much of a public nuisance the small boy might make himself under such circumstances.

Gay, who flourished two hundred and more years ago, makes this reference to the Christmas-box:

"Some boys are rich by birth beyond all want,  
Belov'd by uncles and kind, good old aunts;  
When Time comes round a Christmas-box they bear,  
And one day makes them rich for all the year."

Barring out was one of the Christmas customs greatly in vogue in England three centuries ago. It is a custom that obtains not only in England, but to some extent in our own country to this day, although it is not particularly a Christmas custom in our country. Barring out was the keeping of the teacher or master out of the school-house until he yielded to such terms as the boys of his school chose to dictate. If the boys were able to keep the teacher out of the school-house for three days and nights he was bound by all the laws of the custom to come to terms with the boys, and to grant them all that they demanded in the way of half-holidays and abbreviated lesson hours and extended recesses. If, on the other hand, the teacher outwitted the boys and regained possession of the school-room, the chagrined pupils were bound to submit to such terms as he chose to dictate. As these terms usually included the severe trouncing of all the boys having anything to do with the barring out of the teacher, the boys were on the alert to keep him from defeating them. More than one Christmas time of rejoicing has been turned into a time of weeping and wailing on the part of boys whom some barned-out teacher has defeated.

The vessel-cup is another Christmas custom of ancient origin, but one that has never obtained in our country. At Christmas time poor women go from door to door carrying with them two dolls supposed to represent the Virgin Mary and the infant Jesus. The women carry also the vessel-cup in which to receive small coins after they have sung a song beginning with—

"The first good joy that Mary had, it was the joy of one,  
To see her own Son Jesus to suck at her breast-bone.  
It brings tidings of comfort and joy.  
The next good joy that Mary had, it was the joy of two,  
To see her own Son Jesus to make the lame to go.  
It brings tidings of joy and comfort."

There are seven of these "good joys," the last of them being—

"The next good joy that Mary had, it was the joy of seven,  
To see her own Son Jesus to wear the crown of Heaven."

The singer would then expect the "good joy" of a contribution for her vessel-cup, and there was a superstition extant to the effect that if one would have good luck during the new year so near at hand one must give something to the bearer of the vessel-cup.

The mumming custom of so many years ago was a Christmas hilarity of a somewhat questionable kind because any hilarity involving the dressing up of men in the clothes of women and the women in the garments of the men is open to criticism. Thus arrayed in each other's garments the mummers would set forth for a "mummerie" at Christmas time. They wore masks and some of their escapades were not above reproach. In Stow's "Survey of London" there is an account of a "mummerie" in the year 1377 in which nearly one hundred and fifty men and women maskers took part. This "mummerie" was made for disport of young Prince Richard, son to the Black Prince. We are told that these merry mummers "rode from Newgate through Cheape, over the bridge, through Southwarke, and so to Kington, beside Lamblieth, where the young Prince remained with his mother. In the first ranke did ride forty-eight in the likenes and habite of esquires, two and two together, clothed in redde cotes, and gownes of say, or sandall, with comely visors on their faces. After them came riding forty-eight knights, in the same livery of color and stuffe. Then followed one richly arrayed like an emperor: and after him some distance, one stately tyred, lyke a pope, whom followed twenty-four cardinals: and after them eight or ten with black visors, not amiable, as if they had bene legates from some forraign princes."

Presents were carried to the young prince and there were games and sports in his presence, and we are told that—

"The like was to King Henry the Fourth, in the second of his raigne, hee then keeping his Christmas at Eltham: twelve aldermen of London and their sonnes rode in a

mumming, and had great thanks."

No holiday of all the year has given rise to such a variety of observances as the Christmas holiday, nor has any other holiday brought so much merriment and genuine good feeling into the world. There is no other holiday which, particularly in its modern observance, combines so much of the human and the divine, and this is the chief reason why Christmas is essentially the festival of joy.

## The Drama in New York.

IF SOME ONE would take a meat-axe and chop out the first act of "Audrey," at the Madison Square Theatre, the dramatization of Mary Johnston's novel at that pretty little playhouse would be voted a success. When will playwrights and novel-writers learn that the public now expects to find a strenuous note in the opening act or the first chapter, and, not finding it, will be impatient and disappointed? Those who have read "Audrey" will like the play at the Madison Square Theatre even better than the novel. Miss Eleanor Robson, in the part of Audrey, acts with judgment and gives a well-balanced and pleasing characterization. She is simple, unaffected, and sincere. Frederick Perry as Jean Hugon, the Indian lover, gives us a rare bit of the best kind of work on the stage. The play has been so cavalierly treated by most of the critics that a wrong impression regarding it has been created. I am afraid that the adverse criticisms came from those who only saw the first act with all its boisterous incongruities. The cast, as a whole, is not strong.

It is amusing to observe that some of the critics who are eager to denounce the performance at Mrs. Osborn's fashionable Play House, as nonsensical "tommy rot," find the good deal worse show at Weber & Fields' worthy of occasional favorable comment. As compared with the ridiculous performance at Weber & Fields', Mrs. Osborn's Play House gives a first-class show. Blanche Ring's topical songs, Harry Connor's antics, and Felix Haney's musings are much better than the idiotic fantasies with which Weber & Fields' performance now abounds. I am not surprised to hear that Lillian Russell and Fay Templeton propose to start out for themselves next season. Their departure would be a bad blow to the Weber & Fields' museum.

The sombre play of Mrs. Fiske, at the Manhattan, "Mary of Magdala," seems to have a strong attraction for a certain class of amusement-seekers not commonly counted among theatre-goers. The religious element are finding in Mrs. Fiske's remarkable play something of special interest to them.

Mansfield's elaborate presentation of "Julius Caesar," at the Herald Square, in a limited engagement, promises to be a decided success. The tuneful performances which still maintain their success, are "A Chinese Honeymoon," at the Casino; "The Mocking Bird," at the Bijou; and "The Silver Slipper," at the Broadway.

Among the most popular things of the season are "Imprudence," at the Empire; "The Stubbornness of Geraldine," in which Mary Manning has made a substantial success, at the Garrick; Miss Barrymore, at the New Savoy, and "The Crisis," at Wallack's.

Among the newest productions which have been well received, "The Altar of Friendship," at the Knickerbocker, in which those popular favorites N. C. Goodwin and Maxine Elliott have the principal parts, and Blanche Bates, in "The Darling of the Gods," at the Belasco, are chiefly worthy of note.

## A Thanksgiving Courtship.

THE fire had left the stubble black,  
The frost was in the air,  
They met beneath the orchard boughs  
Of fruit and foliage bare.  
The kitchen door left open sent  
A waft of spice their way:  
"Oh, stay," he plead; "but nay," she said,  
"It is Thanksgiving Day."

She wore a dainty dark-blue print,  
An apron white as snow;  
He never saw a dress he liked  
So well, and told her so.  
He slipped his arm around her waist—  
"Sweet maid, for you I yearn."  
"Pray let me go," she cried, "I know  
The pies are sure to burn."

"Be mine," he murmured in her ear,  
"Consent my life to bless,  
I'll clasp you thus until you do."  
She breathed a bashful "Yes."  
Then, ere upon her rosy lips  
Love's honey dew he tasted,  
She added sweetly, "Because  
The turkey must be tasted."  
MINNA IRVING.

## Austria's Strenuous Old Emperor.

THE VENERABLE Emperor Francis Joseph, of Austria, sets an example to his subjects in strenuousness of life quite equal to that of our youthful President. Winter and summer the Emperor is up at five in the morning. At six his aides de camp have to be ready in case they are wanted, and state business of all kinds is conducted before breakfast. The Emperor seems to be literally devoured, it is said, by a sense of duty. Everything else gives way to it. His Majesty at the most trying and even tragic moments of his life has always attended just as usual to the business of the state, and those about him were startled on the day of the funeral of his only son to find the Emperor ready to sign the orders for the day exactly as usual.

## Guatemala's Terrible Volcanic Disaster.

GUATEMALA, in Central America, has again suffered from a terrific volcanic disturbance. During the closing days of last October and the early days of November the eruption of a volcano in the western part of the country and the heart of the coffee district killed a large number of natives and laid waste a broad section of plantation country. Those who met their death were the native Indians, and the number of lives lost is estimated at between 2,000 and 7,000. The district devastated is said to have been thirty miles in diameter. The reports, coming from two sources—the government and the refugees—are contradictory, the former belittling the disaster and the latter exaggerating it. Last April an earthquake demolished a large part of the city of Quezaltenango, which is near the coffee district and the second city in Guatemala. About 3,000 persons were destroyed. The damage done to the city has been largely repaired.

The volcano from which the recent terrific eruption came is supposed to be near the old crater of Santa Maria, about thirty miles from Quezaltenango, though it had not shown activity before since the advent of white people in the land. The volcano gave a three days' warning, beginning October 28th, to those who were in danger. Persons who escaped and have written to friends in the United States say that at first an earthquake was felt; then loud rumblings of the volcano were heard, and after a day or two an increasing volume of smoke rose from the crater. Many fled from their homes and escaped the shower of ashes and sand and deadly flood of poisonous gases. Reports say that there was no fire or molten lava,

and those who died were destroyed by the suffocating gases. The property loss was great because the coffee crop was just ready for harvest. A comparatively small proportion of Guatemala's coffee comes to the United States. Most of it is shipped to Hamburg.

This disaster in Guatemala is only one of a lengthening list of volcanic and seismic disturbances which have

## Improved Methods of Fighting Fire.

VAST AS the improvements in the methods of fighting fire have been during the past hundred years, there is the best reason for believing that the present century will witness a still greater advance in this direction. Opinions to this effect were expressed by a number of

speakers at the recent meeting of the International Association of Fire Engineers in New York. The days of ponderous steam fire engines, water towers, and aerial trucks are numbered, it was said, and in their place must come standpipes with lateral arms, automatic sprinklers, and independent, high-service water-mains, and, where no great gravity water supply can be had, stationary pumping engines. Taller buildings everywhere have made useless, or nearly so, old-fashioned methods. One speaker, formerly the head of the Chicago fire department, said in a speech that it is impracticable to fight fires in buildings more than five stories high with the hose system, except under the most advantageous circumstances. With better methods all but ten or twelve of the ninety-two engines of Chicago, he declared, could be abandoned, millions of fire losses saved every decade, and the cost of insurance reduced to a minimum. Nothing suggested by these speakers appears in the least impracticable, and the whole system of fire-fighting will

VOLCANO OF SANTA MARIA, 13,000 FEET HIGH, WHOSE RECENT ERUPTION CAUSED FEARFUL LOSS OF LIFE AND MUCH DAMAGE TO PROPERTY IN GUATEMALA.—Lanz.

made the year memorable. Besides the Central American and Martinique horrors, earth convulsions have been reported from many parts of the globe. No region appears to be exempt from the danger. The latest incident of the kind is the disappearance of a portion of the island of South Manitou, in Lake Michigan, inhabited by one hundred families.

doubtless be revolutionized in a few years by the introduction of electrical appliances of various sorts, insuring a degree of speed and efficiency in fire service such as would be impossible with existing methods. Few fields of human endeavor offer a larger or richer promise to the inventor than that of devising new and improved devices for saving life and property from destruction by fire.

## Britain Taught by the United States.

A SIGNIFICANT sign of the times was the visit to this country of Mr. Alfred Mosely, a millionaire, at the head of a commission of inquiry from London, whose object was to study the relations of capital and labor and the conditions of production in the United States. This was a recognition of and a compliment to the pre-eminence of the American republic in all matters industrial. Triumphs of inventive genius and vastly bettered economic methods have made our land a magnificent school for the producers of the more backward nations. The commission, which was composed of British workmen, of many trades, visited a number of American cities to inspect manufacturing plants, and it secured much information of value to both the employers and employees of the big works of Britain. The wide-awake general passenger agent of the New York Central Railroad Company, Mr. George H. Daniels, with his accustomed liberal and enlightened policy, tendered the foreign delegates the hospitality of the road on their trip to Schenectady and Buffalo.

The visitors made a very thorough tour and looked closely into all our representative manufacturing industries. They discovered the points of superiority in our ways of doing things and will carry back with them knowledge that will be utilized in cheapening and increasing production in England. This will aid the manufacturers of that country to become stronger competitors of those in America in the markets of the world. But the keener rivalry thus assured will only spur Americans to more earnest, and doubtless entirely successful, endeavors to retain the leadership.

## How a Soldiers' Monument Was Moved.

THE citizens of Ephrata, Penn., recently performed the difficult feat of moving a heavy monument from its old site to a new one some distance away. The monument had been erected in Mount Zion Cemetery in honor of the soldiers buried there who fought in the battle of

## Beginnings of Reform in China.

THAT THE rugged and sanguinary path of war is sometimes the straightest road to a lasting peace is a truth to which history affords many apt illustrations. That war is also the shortest cut to national reforms has also been demonstrated on numerous occasions, but never more strikingly than in the outcome of the late trouble in China. The Empress Dowager, the actual ruler of China, came back to Peking, ready and willing, apparently, to adopt and observe different rules of court etiquette and to run her government on different lines than ever before, and more in accordance with modern and civilized ideas. The mighty An herself not only bowed to foreigners, but condescended to allow the eyes of thousands of her most humble subjects to gaze upon her ineffable countenance as best they could from distant housetops, without danger of being decapitated for so doing. Later than this the Empress gave an audience in "the most sacred hall" of the forbidden city, although the rules of the dynasty forbid that women should ever enter this holy place. These were slight concessions, it is true, as viewed from the standpoint of a progressive and iconoclastic Occidental, but they signified much in China, where everything, it will be remembered, moves slowly, and where it takes a thousand years, more or less, to effect any change in society or politics. The reforms thus instituted lead to the hope that her Majesty the Empress may in the course of time abandon her opposition to mines and tunnels on the ground that such work is likely to excite the rage of the under-world demons, and it may be hoped further that it will not require another pelting by foreign cannon to effect this change of mind.

## James K. Hackett as an Aggressive Actor-Manager

By Eleanor Franklin

IT IS seldom that an actor is anything but an actor, and many times he is hardly that in the eyes of the critics. Most actors are what they are because there is no excuse for their being anything else. Turn over in your mind the situation that confronts the ambitious young man on the stage, and see if you do not agree with me. The dramatic profession is controlled by a trust, as every one knows, as mightily in its way as the beef trust or the oil trust or any other alleged menace to national well-being. The witticism perpetrated by Weber & Fields last year, when their jokes had something in them and when they defined a syndicate as "a body of men entirely surrounded by money," must have struck straight home to certain young spirits anxious to break away from the control of the theatrical syndicate. To speak with positive personal disapproval of this trust is not my intention. The trust may be the greatest possible benefit to the advance of the American stage for aught we know. There is one thing it seems to be doing, any way, and that is creating a spirit of opposition against itself strong enough to bring about positive and satisfactory results from the public's standpoint.

To say there is no excuse for an actor's being anything but what he usually is does not imply that there is no use in his trying to be anything else, because if he succeeds he simply proves his metal. He could have succeeded in anything else—not to so great an extent, perhaps, but he could have succeeded. Success means only that the world is listening and looking, and it is well to remember that the world harkens only unto true tones and "the public eye" lingers only upon white lights. That which a man expresses itself, and to quote a preacher of preachments, "we grow through expression"; and hark ye, something never grows from nothing. A parrot might express herself for ninety-nine years and never get beyond "Polly wants a cracker," but the man who chanted "Thanatopsis" to the stars and the night winds had Thanatopsis in his

gest way I know to say "that which we are we are," be we ever so hampered by environment. I say "a good bit beyond actors" because, in my humble opinion, actors do not belong in the realms of "creative" art nor on the plane of creative genius. An actor speaks of "creating" a part, but this is not true unless he is an actor-author. However, next to the power of thinking and writing great thoughts is the power of speaking them in a manner to make the world stand still and listen. That is the actor's province, and just as great as he is himself just so great is his power to express the ideas of others, and thus we come back to the statement that a man but expresses himself. He must be able to make a thought his own before he can speak it with conviction that convinces. You could not play a Beethoven symphony on a reed organ, could you? So let us not belittle the power of the man or woman who but expresses what some other can only think. This is digression, but no matter. When

Is a lawyer ever anything but a lawyer?" and I will answer, suavely, "Yes." Both are most always business men if they are successful.

The actor is not even his own business man. He stands in relation to his manager much in the same position that "Julia," Hagenbeck's big polar bear does to the man who takes care of her and dispenses her daily rations, and when we meet an exception to this rule we are liable to salutation, are we not? I remember last year writing a brief biography of Mr. James K. Hackett, with an epitaph appended. I bewailed his short flight across the welkin and consigned his outraged actor spirit to a place where there are no trusts, but now I know I wotted not of whom I wrote. Mr. Hackett is an American. He belongs to one of the oldest families on American soil and is justly proud of its distinguished connection. There are some of us who must tow along with the Irishman who, having made money in America, went back to Erin and bought an "ancestral estate," the halls of which were hung with portraits and trophies which Pat considered most ornamental. He was showing a friend through the place one day when this gentleman, indicating the portraits, said, "And these, I suppose, Mr.—I can never think of any Irish name but Dooley or Hennessy—

"And these, I suppose, Mr. Dooley, are your ancestors?" "Me ancestors, is it?" says he. "No, bedad, they're none of mine. Me own ancestors is all livin'." It's an old story, but because there are some of us who must say "me too" is no reason we cannot appreciate the pride of the man who can really display a family tree of noble proportions.

Mr. Hackett owes his aggressive spirit to a line of ancestors who echoed the motto "Liberty or Death," and from the same source doubtless came his modest but unyielding determination to stay in a contest against big odds. Everybody remembers the "Richard Carvel" episode of last year and what came of it. Everybody remembers Mr. John Drew's grotesque if unwilling attempt at the swash-

soul, and other songs as great, perhaps, which are singing themselves "between the worlds" to-day. This is getting a bit beyond actors, but it is the big-

# BOOKS AND AUTHORS

ROYAL EPICURES is the subject of an interesting chapter in Thielton-Dyer's recent volume on "Royalty in All Ages." We are told here that the ex-Emperor Wenceslaus, when residing at Prague, roasted a cook on his own spit because he sent an ill-dressed capon up to the table. Napoleon was so careless about his stomach that he suffered much from indigestion. One day, it is said, he sat down to a *déjeuner* which comprised his favorite dishes. "But he had scarcely partaken of a mouthful when 'apparently some inopportune thought or recollection stung his brain to madness,' and, receding from the table without rising from his chair, he uplifted his foot—dash went the table, crash went the *déjeuner*, and the Emperor, springing up, paced the room with rapid strides. Dunand looked on, and quick as thought the wreck was cleared away, an exact duplicate of the *déjeuner* appeared as if by magic, and its presence was quietly announced by the customary '*Sa Majesté est servie.*' Napoleon felt the delicacy, and '*Merci bien, mon cher Dunand,*' with one of his inimitable smiles, showed that the hurricane had blown over." According to this same writer, the gaming table has attracted to it many crowned heads in days both past and present, and we are reminded that George IV. when Prince of Wales lost not much less than \$4,000,000 before he was twenty-one years of age; and of France we find this written: "At the death of Louis XIV., it is said that three-fourths of the nation thought of nothing but gambling, and incidentally may be noticed a little court occurrence associated with Louis XV. At the royal en-cas-table M. de Chauvelin was seized with a fit of apoplexy, of which he died. On seeing him fall, some one exclaimed, 'M. de Chauvelin is ill.' 'Ill?' said the King, coldly turning round and looking at him; 'he is dead! Take him away; spades are trumps, gentlemen.'"

THE FACT that the story of "Pickett's Gap," by Homer Greene (Macmillan & Co.), happens to be located in a region familiar to the writer of this paragraph by life-long associations helps to invest it, no doubt, with a peculiar and special interest for him, yet he cannot but feel that other boys (?) will find rare entertainment also in the forest life and the adventurous scenes which the author depicts. The story takes its title from an opening through the hill range that lines the westerly shore of the Delaware River, in the northeastern corner of Pennsylvania, perhaps the most wild, rugged, and picturesque region in the Middle States and the scene of many thrilling events in the days when Brant and his Indian warriors roamed over these hills and valleys. Two rival railroad corporations discover that this gorge forms the only practical outlet eastwardly from certain anthracite coal-fields to the valley of the Delaware and thence to tide-water. The Gap was owned by Abner Pickett, stern, rugged, and uncompromising, a type of the bluff New England farmer on Pennsylvania soil. He has become estranged from his only son, but the son's child, Dannie Pickett, is the idol of the old man's heart. In the contest between the railroad companies for the right of way through Pickett's Gap this boy plays an important and mysterious part. For many weeks, while the fight for the possession goes on, he holds the key to the situation, swayed alternately by conscience, fear, and affection, until the climax of the struggle is reached in the episode of the court-room. The underlying purpose of the story is to depict the final triumph of conscience over personal fear, and of paternal affection over the power of selfish pride.

THE CAREER of Prince Kropotkin, whose "Fields, Factories, and Workshops" has recently appeared in a new edition from the Putnams, has had enough real adventure in it to fit out several novels of the period with a full supply of "thrills" and some to spare. The prince belongs to the highest Russian aristocracy. The family of the princes of Kropotkin is one of the few in direct descent from the feudal princes of the ancient royal house of Durik. It used to be said of him in his old Socialist set that he had a right to say how Russia should be ruled, for by birth he had a title to the throne of Russia, while the Emperor Alexander II. was "only a German." Kropotkin made a very cordial impression during his first visit to the United States in 1897. He is described as "of medium height and of spare figure, his general appearance being suggestive of a quick, nervous temperament. The benignant face, the slight stoop, the modest garb, all indicate the man of science." Yet is this quiet gentleman under very lively political ban in Russia, and would doubtless find it impossible to travel outside the Czar's borders, if he should once again return within accessible political distance of Siberia. Kropotkin is a Socialist in the large sense of the term, desiring to obtain for his fellow-countrymen a larger measure of freedom than they have yet enjoyed. He was imprisoned for two and a half years in the fortress of St. Peter and St. Paul in St. Petersburg, a quarter of a century ago.

IT IS an old and well-approved device of public orators to capture the interest of an audience and work them up to a sympathetic and responsive mood by starting off with some pleasing anecdotes before "coming down" to the serious business of the hour. It has seemed as if some such plan as this must have been in the mind of "Ian MacLaren," the Liverpool preacher, in first entering the literary field and securing for himself an immense constituency of readers by such thoroughly charming

By La Salle

fiction as his "Bush" stories, really sermons in disguise, and fine ones, too, and then taking advantage of the fame and prestige thus gained to secure a fair hearing for the more serious and purposeful work that has come later, such as his "Mind of the Master" and his book of the present season, "The Homely Virtues." If this was his purpose it was a good one and has succeeded admirably, for we have no doubt that these later books have had a host of readers who could not have been brought within gunshot of them had not they hoped to find in them some of the delightful flavor of the "Bonnie Brier Bush." And in this expectation they have not, indeed, been disappointed, for even when Dr. Watson is discoursing on such well-known themes as "Thoroughness," "Kindness," "Thrift," and "Gratitude," he manages always to be original and entertaining, and is never far away from the tone and spirit which impart such an abiding charm to his stories.

THE YOUNG folks, to whom M. Paul du Chaillu addresses his new volume, "King Mombo" (Charles Scribner's Sons), are upon the whole very fortunate little beggars. The volume narrates a white man's adventures in the great African forest with a spirit and interest that

PAUL DU CHAILLU,  
Famous traveler, and author of "King Mombo."

will make their direct appeal to the easily fired imagination of youthful minds. No particularly startling incidents and hairbreadth escapes illumine the course of the story, which relies more upon a general atmosphere of strangeness and romance for its success. There are, to be sure, startling incidents enough, but they lie scattered here and there with an admirable modesty that refrains from the blood-and-thunder touch of a less worthy facility. But to that kind of child's intelligence which peoples the passage with hostile natives and transforms the music-stool and army chair into impregnable strongholds in a virgin forest, "King Mombo" can hardly fail to prove a very real delight. The illustrations by Victor Perard are somewhat uneven. Where they are good, however, as in depicting a charging elephant or a gorilla at bay, they are very good indeed, and the volume is on every account to be commended.

THE NATIONAL board to whom the duty is assigned of determining the spelling of geographical names has performed excellent service in the way of promoting simplicity and common sense in geographical nomenclature, but whether its recent decision that Marseilles should be spelled "Marseille," as it is in French, is entirely sound is open to doubt. If it is laid down as a rule that the names of foreign towns, cities, rivers, etc., are to be spelled in English as they are spelled in the lands where they are located, endless confusion will ensue. A certain New York newspaper editor and proprietor attempted this "reform" some years ago with results that added considerably to the gayety of nations and more than considerably to the perplexity and vexation of his readers. Under this ruling Florence appeared in the date lines under the unrecognizable form of "Firenze"; Venice was transformed into "Venezia," and Rome appeared as "Roma." It is doubtful whether one reader in a

thousand recognized the first two of these terms in their proper application, the vast majority probably passing them over as the names of some new and hitherto unknown towns. The rule of doing "in Rome as the Romans do" is certainly not a wise one to follow in geographical spelling.

ONE OF the most attractive books for the coming holidays is "Japanese Girls and Women," by Alice M. Bacon (Houghton, Mifflin & Co.), in a new illustrated edition. Mrs. Bacon has thoroughly revised her charming account of the girls and women of Japan, and has made such additions to each chapter as the conditions of this rapidly changing country have made necessary. Her growing intimacy with these singularly retiring people has enabled her to add an important chapter on household customs and a final chapter containing a rapid survey of the progress during the last decade. The illustrations made for this edition lend the book a strikingly Oriental air. There are twelve full-page plates in color, and forty-two outline drawings, chiefly the work of Keishu Takenouchi, one of the foremost illustrators of Japan, and a resident of Tokio. They exhibit an exquisiteness of color and delicacy of drawing characteristic of the best Japanese art, and show not only beauty, but such truth in their minutest detail as no one but a native artist could give.

NO WORK of recent date has been more coveted by publishers, and that for obvious reasons, than the memoirs of "Oom Paul," late President of the Boer republic, and the rivalry to obtain publishing rights in them was sharp and spirited. The Century Company is therefore to be congratulated on its success in securing the American rights to the book. Its sales are certain to be immense, not only because the Boer leader has many ardent sympathizers in this country, but also because Mr. Kruger is an intensely interesting personality and has led a unique and most remarkable career. The work, it should be understood, is not put forth by the venerable ex-President as a vindication of himself, but simply as a statement of what actually occurred, in which intrigues are unveiled and motives revealed. Mr. Kruger feels that he is uttering his political death-song. He has nothing more to fear, to gain or lose, and so, for the first time, it will perhaps be said, he places the unvarnished truth before the world, neither caring for reputation, for friends, nor for enemies.

MR. ANTHONY HOPE, in his Ruritanian manner, is Bret Harte's victim in the late author's "Condensed Novels," and the familiar blend of romance and modernity is admirably hit off in "Rupert the Remender." The King's castle was a "fine old medieval structure . . . lit by electricity, had fire-escapes on each of the turrets, four lifts, and was fitted up by one of the best West End establishments. The sanitary arrangements were excellent, and the drainage of the most perfect order, as I had reason to know personally later." "The Adventures of John Longbowe, Yeoman," is a composite parody on the Wardour Street historical romance, and should prove an excellent deterrent to aspirants who confound bad spelling with the archaic spirit. "Dan'l Borem" strikes us as not sufficiently condensed, and the Kipling travesties are rather disappointing.

AS TO whether the author of "The Confessions of a Wife," now running in the Century, is a man, as many are surmising, or a woman, I shall not risk a slight reputation for literary insight by guessing, since I have no absolute knowledge whatever to guide me and the evidence in favor of both suppositions is about even. I only know that the publishers are guarding the secret remarkably well and that the "Confessions" are mightily entertaining reading. I can predict, without any hazard, that when they appear in book form, as I presume they will soon, the volume will have an astonishing sale. That much might go without saying.

## Prize-fighter's Heart.

COFFEE SHOWN TO BE THE CAUSE OF HIS WEAK HEART.

FRANK WALLIS, the Illinois champion feather weight, says:

"Nearly all my life I drank coffee, and it finally put me in such a condition that training for any fight was almost impossible.

"My breathing was poor and slight exertion always made me very tired. I could not understand it, for I was otherwise well and strong, until one day, in training quarters, a friend and admirer of mine asked me if I drank coffee. I told him 'yes,' and he said that was what ailed me.

"This was two weeks before an important fight of mine was due. He explained how coffee affected the heart and nerves and told me of the good qualities of Postum Food Coffee. I immediately commenced to use it in place of coffee. The result was wonderful. My nervousness left me, my breathing bothered me no more, my confidence returned, and I was as good as ever in a short time.

"I returned victor of the fight, which I am confident I would not have been had I continued the use of coffee."

PLAN TO SETTLE STATUS OF COLLEGE ATHLETES—FOOTBALL AS AN INDOOR GAME—OUTLOOK FOR HORSE-RACING

J. W. SPENCER, Columbia University man, who lately won the 1,000-yard Metropolitan championship swimming race.—*Exile.*

**ELIGIBILITY OF COLLEGE ATHLETES.**—A prominent graduate of Yale who has been identified with college sports for many years agrees with me in that some plan should be devised by which the squabbling over the eligibility of college athletes can be stopped. Our Yale friend makes this suggestion, which seems to be sound and may be adopted: "The charges of ineligibility of players have caused so much trouble during the recent years that something will have to be done to preserve that feeling of true sportsmanship which should exist between the athletes of all universities. My plan is this: Let Yale and Harvard each appoint one man, they to select a third, and the three to act as a committee with full power to investigate and act on the eligibility of all players and candidates for positions on teams, whether athletic, tennis, rowing, football, baseball, or hockey. After an investigation the committee will announce its finding to each college, its decision being final. This will do away with needless and foolish protests and save much ill-feeling all around." So long as the present rage for college football continues most of the athletic enthusiasts at the different universities will try to stretch a point in their effort to get strong men for their football teams. There have been muckers in some football lines who are better fitted by disposition and breeding for the prize-ring than for a place on any college team. Admitting that this happens only once in a thousand times, that small percentage, even, would not make it right. Old-time athletic clubs had the same troubles and their successors probably will until clear-headed business men get control of their management. There is no reason why every college and athletic club in this country should not develop its own athletes. The four-year eligibility rule is a good one and should be lived up to. The Cutts and Schick cases at Harvard caused much ill feeling, and the squabble over Glass, of Yale, will not help that fraternal feeling which should exist between all universities in their sports. Yale this year dropped both Owsley and Hinkle from her football squad—both good men—simply because fear was expressed that the players' eligibility might be questioned.

**PROFESSIONAL FOOTBALL INDOORS.**—Professional football indoors has been discussed before, but a syndicate has been formed to give the scheme a practical trial during the winter. "Tom" O'Rourke, of fictitious fame, has made dates at Madison Square Garden, New York, and games will be played right through the winter, provided the public takes enough interest in the plan to make it profitable. While the idea is to have regular college football, the attempt will be made also to increase interest in association football. There are at present four professional teams in the field playing the regular college game, two in Philadelphia, one in Pittsburgh, and one in Orange. Other cities will not be slow in getting professional teams if the game turns out to be a money-maker. Some of the college players at least would join the professional ranks, just as they do in baseball, if the salaries offered were tempting enough. Some young men leave college with no set plans regarding their future business calling. Positions in offices and factories do not bring in the financial returns so desirable to a young man compelled to earn his own living. The turning of the amateur into a professional need not necessarily interfere in any way with his success in any other line of trade or business later in life.

**HORSE-RACING PROSPECTS.**—It has been a great year for the followers of both the harness horse and the thoroughbred, and it is a very reasonable expectation that next season will be even more prosperous than the one just ended. The efforts of a group of Pennsylvania magnates to restore racing in the Keystone State have better prospects of success than ever before, because of the absence of any big turf scandal and the cleanliness with which the sport has been conducted in neighboring States. The proposal of the Westchester Racing Association to lend the prestige of its name and management to the Benning track will, beyond question, elevate the character of the sport at Washington and the influence of such a move will be felt throughout the East, and the outlook is for a higher tone everywhere next year. The race promoters of Pennsylvania propose to make a no-half-way appeal to the Legislature, but will ask for a flat bill authorizing running races and betting on the track premises. There still are rumors

of a big combination of tracks out on the Hempstead plains and there is no doubt that the project is being pushed, but its realization is at least three years off.

**A NATIONAL COURSE FOR MOTOR TRIALS.**—The owners and makers of automobiles and motorcycles are pining for records new. All sorts of trials are made over all sorts of roads and on every kind of a track. Track records are practically worthless, since the courses differ so radically. There are tracks in the East, for instance, seconds faster than any other tracks in the same section of the country, or in the West, for that matter. There are stretches of road in certain sections where an automobile could be driven in safety at a rate of a mile a minute. Such stretches, however, are rare here, plentiful as they are in England and France. The Automobile Club of America has established a national hill-climbing course at Eagle Rock, N. J., where all hill-climbing trials must be made to be officially accepted as records by the club.

FAMOUS UNBEATEN PACER DAN PATCH (1:59 1-4) SOLD RECENTLY AT RECORD PRICE OF \$60,000, GETTING A RUB-DOWN.—*Lucky.*

It is expected that a mile stretch of roadway somewhere in the East will be selected where speed trials can be held without interference from local authorities. When this is done the mile road-record for automobile and motor cycle will amount to something.

LATEST REMARKABLE RIDING DEVICE OF THE AMERICAN JOCKEY. (A GERMAN CARTOON.)  
*Fliegende Blätter.*

**SHORT-ODDS FAKES.**—While it may seem unchristian-like to wager money on the result of races winter and summer, it is nevertheless a fact that many thousand people do this all over the country. Since the race-tracks in the East shut down for the season, the poolrooms in many of the large cities where crusades against poolrooms have been active have adopted a plan of giving bettors the odds as published in the newspapers the next morning. It is, of course, to the interest of the poolroom keepers to have the odds quoted against the winners as small as possible. The result has been that in some cases odds have been materially reduced when a particularly heavy play has been made on certain horses which happened to win. News agencies which circulate racing news owe it to the public to see to it that its agents send the closing prices at the tracks and nothing else.

**FIRENZA A FAILURE IN THE STUB.**—While true horsemen throughout the country will regret the untimely death of Firenza, that once great racing machine, the lustre of the mare dimmed when she was retired from the turf and was sent to the breeding farm. While an idol on the running turf and one of the pluckiest and speediest of the thoroughbred world, she was a positive failure as a matron and none of her get ever amounted to much. There are some who think that Firenza was raced too long, but many expert breeders say that the breeding from high-class mares for racing purposes is too often a matter of luck. Among other mares which made names for themselves on the running turf, but which proved to be

failures on the breeding farm, might be mentioned Miss Woodford, Señorita, and Reckon. Miss Woodford could travel any distance and over any sort of track, and her get was anxiously looked for. Now that Imp has been retired, one of the grandest and hardest mares that was ever raced in this country, horsemen generally will watch for the appearance of her colts and fillies and wish her better luck than fell to the famous Firenza.

**THE BICYCLE STILL FASCINATES.**—It would seem that the fascination of the bicycle has not been lost entirely when a six-day race attracts a bigger crowd than ever, and bigger even than other shows that go to Madison Square Garden, New York. The race of 1902 was less brutalizing than those of former years. The contest has a changed character since the sprint riders began to be the competitors. It was less shocking because the men did not come so near to wrecking their constitutions. It was therefore less morbidly spectacular. It came nearer to being true sport because it was practically a series of sprint races with easy riding between. The final score of 2,477 miles and three laps was 256 miles and one lap behind the record made by Miller and Waller in 1899, and yet in spite of this and of its being a more clean exhibition, a less grueling one and a tamer one, more went to see it. It is good to think of this and know that the fascination of such events is not so much in the brutality of them as was once supposed. A pedestrian contest could not draw such crowds as did the cycle race.

GEORGE E. STACKHOUSE.

## Sporting Queries Answered.

**M. C. B., NEW YORK.**—Is making a wager in a poolroom you write the name of the horse, the odds, and your initials on a slip of paper and hand this with your money to the bookmaker. In case you win you make out a similar slip and he pays you the money. He gives you no receipt nor ticket.

**W. A. C., BOSTON.**—The proposed changes in the golf rules will not be acted on until the annual meeting in February. Then the smaller clubs will get a better representation in the management of the national association.

**G. L. K., NEW ORLEANS.**—Six-day continuous races, either on foot or bicycle, are prohibited in New York State. Team races are allowed, but no man is supposed to be on the track for more than twelve out of every twenty-four hours.

**W. E. H., NEW YORK.**—The scores as published were correct. Brown defeated Columbia 28 to 0, and Amherst won from Columbia 29 to 0. The ball is kicked out from a touchdown, and if it is missed no try for goal is made.

**B. J. O., BOSTON.**—The "bicycle trust," so-called, is a combination of bicycle manufacturers who pooled their issues two years ago. A. G. Spalding was the first president, and he was succeeded by H. Lindsay Coleman.

**J. A. M., CHICAGO.**—According to statistics recently compiled ten players were killed in football games this year. Probably half as many died as a result of prize-fights.

**D. E. T., SAN FRANCISCO.**—Burns and Bullman were set down by the stewards of the Jockey Club for willful disobedience at the post. No fraud was charged against either jockey.

**L. C. B., WINCHESTER.**—Bird shot can be purchased as follows: No. 7, No. 7½, No. 8, and No. 8½. The old eight is about the best from now on.

## Think Hard.

IT PAYS TO THINK ABOUT FOOD.

THE unthinking life some people lead often causes trouble and sickness, as illustrated in the experience of a lady who resides in Fond du Lac, Wis.

"About four years ago I suffered dreadfully from indigestion, always having eaten whatever I liked, not thinking of the digestible qualities. This indigestion caused palpitation of the heart so badly I could not walk up a flight of stairs without sitting down once or twice to regain breath and strength.

"I became alarmed and tried dieting, wore my clothes very loose, and many other remedies, but found no relief.

"Hearing of the virtues of Grape-Nuts and Postum Food Coffee, I commenced using them in place of my usual breakfast of coffee, cakes, or hot biscuit, and in one week's time I was relieved of sour stomach and other ills attending indigestion. In a month's time my heart was performing its functions naturally and I could climb stairs and hills and walk long distances.

"I gained ten pounds in this short time and my skin became clear and I completely regained my health and strength. I continue to use Grape-Nuts and Postum, for I feel that I owe my health entirely to their use. I like the delicious flavor of Grape-Nuts and by taking Postum according to directions, it cannot be distinguished from the highest grade of coffee."

Name given by Postum Co., Battle Creek, Mich.

Continued from page 732.

"M." Omaha: No.  
"R." Oneonta: No.  
"B." Chicago: Paper will be sent.  
"Electricity": Nothing known about it.  
"L." New York: I find no record of it.  
"W." Washington: Pretty nearly a fake.  
"A." Langhorne, Penn.: Answer by letter.  
"C." Wilkes-Barre, Penn.: Am making in-  
quiries.

"S." Baton, N. M.: Nothing is known of it  
on Wall Street.

"W. F." Newark, N. J.: Anonymous com-  
munications not answered.

"H." Piquette, Penn.: I do not advise  
either as an investment.

"N." Lancaster: Suits against them have been  
in the courts several times of late.

"W. F." Duluth: (1) Not an investment. (2) I  
do not regard it as standing very well.

"Pleasant": Chattanooga. You run your chances  
and they will be nine out of ten against you.

"H." Holyoke: I regard some of them as in-  
vestments. There are times when invest-  
ment securities should have a distinct preference.

"S." Philadelphia: Only one name can go on  
my preferred list and that the name of the oil  
company. I do not think anything of the oil  
company.

"T." New York: Its prospectus makes an ex-  
cellent statement, but it is an industrial propo-  
sition, which, like all industrial, would suffer in  
hard times.

"G." Skagway, Alaska: Douglas, Lacey & Co.  
are members of the Consolidated Exchange with  
agencies in the principal cities, and handle mostly  
mining concerns.

"P." Augusta, Ga.: Glad you have profited  
by my advice, but marginal trading at this time,  
such as you propose, looks decidedly risky. I can-  
not advise on wheat.

"H." Southampton: One dollar received. You  
are on my preferred list for three months. I  
do not advise it as an investment. It is highly  
speculative and its promises seem extravagant.

"S. W." New Haven: (1) I have no knowledge  
of it. A commercial agency rating might be ob-  
tained from any bank with which you deal. (2)  
Do the best I can. Delay sometimes unavoidable.

"H." Exbridge, Mass.: Impossible to do it  
safely in a market subject to fluctuations and to  
special movements arising from inside combina-  
tions and outside cliques. Hazardous to trade at  
present.

"C." Vance, Cal.: One dollar received. You  
are on my preferred list for three months. (1) I  
think very little of the stock or of the concern  
which sells it. (2) By no means an investment,  
and a very poor speculation.

"M." St. Louis: Everything depends on the  
integrity and enterprise of the management. Its  
officers include a number of prominent business  
men, but the high rate of interest it pays shows  
that it must be more or less speculative.

"B." Fonda: If the gold standard should be  
established in Mexico, as is proposed, the Mexican  
Central shares would no doubt have greater stability  
and value. The earnings of the road are  
increasing, but this is not a good time to go into  
the market.

"F. P." Reynoldsville, Penn.: (1) I do not ad-  
vise short sales of United States Steel common be-  
cause that is a dangerous side of the market to be  
on, unless you are abundantly protected. I be-  
lieve that nearly all stocks are still too high.  
(2) Not yet.

"B." Kenova, W. Va.: Properties offered by  
Wood, Harmon & Co. are all well located and if any-  
thing like the rate of increase in New York prop-  
erty is enjoyed in the future which it has had in  
the past, I see no reason why their lots should not  
participate in the improvement.

"Idaho." Chippewa Falls, Wis.: You are on my  
preferred list. (1) Nothing is known of it on Wall  
Street. (2) No. I see no advantage when you  
consider the trouble involved. (3) Any of the  
leading New York houses. (4) New York. I am  
old, but I am not familiar with the subject.

"S." Washington: The president of the  
Guantanamo Consolidated Mining Company has  
summer claimed that the financing of the company  
had been completed, and that dividends might be  
expected this fall or at the beginning of the new  
year.

"Calvert." Baltimore: Thank you for the in-  
formation. I have understood that something of  
the kind was contemplated, but the matter has  
been so carefully safeguarded that authentic infor-  
mation is not obtainable. (1) I am making in-  
quiries. (2) I would not sell my American Ice at  
present.

"Charles." Columbus: Two dollars received.  
You are on my preferred list for six months.  
(1) I would not trade on a margin in this market,  
though Western Union stands well as a dividend-  
payer and, on reactions, has been picked up by  
many traders. (2) The proceeding looks irregu-  
lar. Consult an attorney.

"C." Dresden, O.: (1) The New York Central  
pays 14 per cent. quarterly and the Pennsylvania  
3 per cent. semi-annually. Both are investment  
stocks. Baltimore and Ohio preferred and Union  
Pacific preferred, paying 4 per cent., yield better  
returns and are also investments. (2) If the  
stringency in money causes further liquidation,  
Yes.

"Trust." Indianapolis: The decision of the  
Kansas City Court of Appeals in the trust matter  
was to the effect that under the State's statute a  
trust cannot compel a man to pay a bill even if he  
honestly owes the money. I agree with you that  
drastic anti-trust legislation by the respective  
States may be anticipated, if action is not speedily  
taken on this matter by Congress.

"Candid." Philadelphia: Four dollars received.  
You are on my preferred list for one year. I do  
not believe in the "Prudentials" offered by the  
New York concern or in anything else that prom-  
ises you 174 per cent. dividends per month. Be-  
ware of all the get-rich-quick concerns, no matter  
how alluring their prospectuses may be. History  
shows that there is but one end to them all.

"S." Sanford, Me.: Four dollars received.  
You are on my preferred list for another year. It  
pleases me to have your statement of profits made  
during the year on my suggestions. (1) The pur-  
chase of Steel common was against my advice.  
I would not sacrifice it at present. (2) The divi-  
dend on United States Steel common is 1 per cent.  
quarterly. One is due at the close of this year.

"A. B. C." Grand Rapids: One dollar received.  
You are on my preferred list for three months.  
(1) Southern Railway common sold last year as  
low as 10 and as high as 35. I do not believe it  
has much of an investment quality and would  
sell whenever I could without loss. (2) I see  
nothing in the claims of the J. O. Orton Paine  
Company. The litigation of Mr. Paine with some  
of his customers may have attracted your atten-  
tion.

"M.": (1) Chicago Great Western B's sold last  
year as low as 41 and as high as 50. I would not  
sacrifice them at present. (2) Colorado Southern  
first preferred sold at 40 last year. The payment  
of dividends on this stock has begun and it there-  
fore has more of an investment quality than the  
second preferred. (3) The Ft. Worth and Denver  
City shares are regarded with favor by those who  
are familiar with the property. Am not advising  
purchases until the money stringency is relieved.

"Markon." Kent, O.: (1) Obviously, I can only  
draw my inferences from statements made by the  
company and by its officers, who seem to be busi-  
nesslike active and alert. Some stockholders have  
visited the plant, I believe. It might be well to  
write directly to them, so that your information  
will be more extensive and authentic than I could  
possibly give. (2) The officers of the United  
States Electric Clock Company report that they  
are doing a constantly increasing business and are  
getting on a stronger footing every day.

"W." New York: American Hide and Leather  
has raised in price this year from 9 to 13. Its  
chief commendation to small speculators has been  
its low price. It has little more than speculative  
value. The condition of the money market does  
not promise improvement before New Year's.  
There are evidences that the demand for money is  
general, as I have pointed out before, and not local  
to Wall Street. There is significance in this.  
Deer money, if it continues, must call a sharp  
halt on industrial prosperity.

"H." Brooklyn: Four dollars received. You  
are on my preferred list for one year. My con-  
stant advice had been to buy and not to sell  
Manhattan; but that was before the recent develop-  
ment concerning its lease. On the earnings of the  
stock thus far shown, it is not a great purchase.  
A significant break would no doubt affect it along  
with the rest of the market. Many things may  
happen within the next few weeks, unless the money  
stringency abates, and you will have to be guided  
by circumstances as they may occur from day to  
day.

"X. A." Augusta, Ga.: (1) Baltimore and Ohio  
common, I am advised by those who seem to know,  
is making a great deal more per mile, not, than  
Missouri Pacific. From the investment basis, it  
looks to be the better purchase at this writing.  
On declines, I regard it with much favor. It is  
said to be earning four times its dividends. It  
sold last year as low as 82 and as high as 114.  
(2) St. Louis and San Francisco second preferred  
was a good speculation when I advised its purchase  
at half present prices. It is now paying 1 per cent.  
quarterly and on the basis of earnings is cheaper  
than many other investments of its class.

"H." Newburg: It is true that the United  
States Steel Trust has plenty of orders for steel  
rails and has not cut the price, but what will it  
do next year when such strong competitors as the  
Tennessee Coal and Iron Company, the Lacka-  
wanna Steel Company, and the Union Steel Com-  
pany enter the market as producers and sellers of  
rails? Will the steel trust take these concerns in?  
That is hardly possible, with money in such demand  
and new industrial propositions in such disfavor.  
The fact that the great parking-house combination  
was at the last moment abandoned, at least tempo-  
rarily, is a striking indication of the close condition  
of the money market.

"H." Middletown, N. Y.: I appreciate your  
compliment. (1) I would not advise the purchase  
of any shares in this market on a two per cent.  
margin. Money is too tight to make marginal  
trading safe, and safety ought to be first considered.  
(2) It is impossible to tell how far a break may go.  
It is like a case of fever. The doctor cannot tell  
what the patient's temperature may be. He must  
observe all the symptoms and decide for himself  
when the critical moment has arrived. (3) Sugar  
stock is too strongly held by a clique to advise  
operations in it. (4) The controlling interest in  
Pacific Mail is held by the Southern Pacific  
Railway. Its future depends upon what the con-  
trolling element desire to do with it. The passage  
of the ship-embargo bill would be advantageous  
to it.

"Laona." Four dollars received. You are on  
my preferred list for one year. (1) As I have  
said before, the impression has prevailed that  
Amalgamated Copper has been picked up all around  
50 by those on the inside. The plans of those in-  
siders, however, are not revealed. Until they are  
disclosed one must purchase the stock as a specu-  
lation. (2) The pool in Southern Pacific has not  
yet liquidated its holdings. If the tight money  
market compels further liquidation the stock  
will decline. It is manifest that there is to be  
greater competition in transcontinental traffic, and  
unless business warrants an increase of facilities a  
diminution of earnings will be the outcome.  
(3) I know of no "gold-edged" bonds yielding 5  
per cent. (4) Yes, as long as you are on my pre-  
ferred list.

"Inquirer." Poughkeepsie, N. Y.: (1) I have  
no doubt that the general increase in the pay of  
railroad men was not so much a voluntary as a com-  
pulsory matter in view of the general movement  
of Western railway employees, which still continues,  
in favor of a demand for still higher wages. The  
effect of this demand for an increase of the wages  
of 170,000 men, if it is insisted upon, will be most  
depressing. (2) Just how much the increase in  
wages will cost the railroads remains to be seen.  
Freight rates are being raised to offset the increase,  
but the public may not stand for this and shippers'  
combinations are powerful in State Legislatures and  
in Congress. The vice-president of the Atchafalpa  
estimates that the increase in the pay of its engi-  
neers and firemen, just made, will cost the company  
\$800,000 a year, and the new pension system of the  
Union Pacific starts out by adding \$300,000 per  
annum to its outgo.

"Factor." Pittsburgh: (1) Unless a strong com-  
bination to sustain the price of copper is effected,  
that metal is liable to sell lower next year. Most  
mercantile products are liable to reach a lower  
plane in 1903. The decline in iron and steel ma-  
terials has only begun, and must ultimately take  
in steel rails. (2) Overproduction has much to  
do with the decline in copper, as it has had to do  
with the seasonal fall in silver. It hardly  
seems possible that silver can be selling now at  
only a little more than one-third the price at which  
it sold in 1899, and at less than half the price in  
1890. The effect of this decline on the vast com-  
mercial interests of the Eastern countries which  
have been using silver for currency remains to be  
seen. These Eastern countries are great consumers  
of commodities manufactured by the leading  
nations of the world. Whatever depresses the  
business of the former must obviously affect the  
business of the latter.

"H." New York: (1) I think you are right.  
(2) The fact that so many people are believing  
that Amalgamated interests have reached a settle-  
ment with their opponents causes others to doubt  
it. (3) United States Realty preferred looks  
cheap at present prices as an industrial investment,  
and the common reasonably cheap as a specu-  
lation, if statements made by the company are ac-  
curate. (4) The market cannot be advanced with  
money at existing high rates. Most casual observers  
are inclined to your opinion that heavy holders of  
stocks, which they would like to market, are eager  
to start a bull movement as soon as possible, and  
that some of them think it can be started readily  
from the present lower plane of prices. If, as  
you assume, the few controlling factors of the  
market "can always find money enough for their  
purposes," then a bull market in the new year,  
after money conditions have relaxed, would be  
not only possible, but probable. The question is,  
however, can these controlling interests get all  
the money they want at rates low enough to war-  
rant an attempt to create a new upward movement?  
Would they not be in grave danger of having large  
additional burdens unloaded upon them by those  
who are weary of holding stocks and who are only  
anxious to get their money back and get out?  
You can speculate on this condition as well as I.  
New York, December 18, 1902. JASPER.

## Wonderful Thunder Mountain

HERE ARE THE FACTS CONCERNING THE ALMOST  
INCREDIBLE EXTENT AND RICHNESS OF IDAHO'S  
NEW GOLD FIELDS—UNPRECEDENTED CON-  
DITIONS PLACE FORTUNES WITHIN THE REACH  
OF ALL WHO WILL SIMPLY TAKE THE  
TROUBLE TO INVESTIGATE AND ACQUAINT  
THEMSELVES WITH THE POSSIBILI-  
TIES OF THIS NEWLY FOUND  
COUNTRY OF GOLD.

When some conception is gained of the real con-  
ditions in the new gold fields of central Idaho it is  
not to be wondered at that the words "Thunder  
Mountain" are fast becoming a household phrase  
in every home throughout the great West; nor is  
it any longer a matter of comment that the new  
gold fever is gradually spreading farther and farther  
into the financial precincts of the mighty East.  
Not since the historic "boom" of forty-nine and  
the early fifties has the country been so roused  
to the almost unlimited money-making possibilities  
of judicious and well-directed gold-mining invest-  
ment as at the present time, and this excitement can  
be traced direct to the really wonderful discov-  
eries recently made in the development of the great  
gold-bearing dykes and ledges in the Thunder  
Mountain country.

When the great "Dewey" mine on Thunder  
Mountain was first discovered some four years ago,  
it was thought that the prospectors had accidentally  
hit upon the one favored spot in that wild range  
of unnamed hills and towering peaks. But fur-  
ther investigation proved that the "Dewey" was  
merely an index or a sample, as it were, of the  
ore formation in what now bids fair to become the  
greatest gold-producing district in the world.  
To-day the "Dewey" is only one of many great  
mines that have been opened up in its immediate  
vicinity. Just to the east of it and on the same  
mammoth ore body—the Dewey Ledge it is called  
—lies the EAST DEWEY GROUP of claims, con-  
sisting in all of about 120 acres of magnificent min-  
ing property, the surface showing of which is ad-  
mitted by experienced mining men to be even richer  
than the "Dewey."

The East Dewey Gold Mining Company offers  
to the public an opportunity to share in the profit  
of developing and operating its mines, and on  
strictly ground-floor terms. The par value of East  
Dewey stock is \$1 a share, and the public is now  
invited to subscribe to the first allotment of this  
stock at the exceedingly low price of

## TEN CENTS A SHARE!

It is reported that the small 10-stamp mill on the  
"Dewey" mine recently produced SIXTY  
POUNDS OF GOLD WORTH APPROX-  
IMATELY \$13,000 IN 17 DAYS' RUN. Not a  
single tunnel in the entire Thunder Mountain dis-  
trict has been driven a distance of fifty feet without  
encountering a rich and practically inexhaustible  
body of ore, and IT IS ALL FREE-MILLING  
ORE that can be both mined and milled for a cost  
not exceeding \$1.50 a ton. If it ran only \$4 a ton  
in gold, big dividends could be earned, whereas all  
the developments of the past season show values  
ranging from \$6 to \$100 to the ton, and in many  
instances MORE THAN \$100.

IF YOU ARE AMBITIOUS TO MAKE MONEY,  
IF THE POSSIBILITY OF MAKING AN INDE-  
PENDENT FORTUNE FROM A COMPARA-  
TIVELY INCONSEQUENTIAL INVESTMENT  
APPEALS TO YOU, GET FULL PARTICULARS  
IMMEDIATELY regarding the assured benefits  
from a purchase of stock in the East Dewey Gold  
Mining Company. IF YOU EVER INTEND TO  
MAKE A FORTUNE IN LEGITIMATE MIN-  
ING, THIS IS THE OCCASION AND THIS IS  
THE COMPANY. Remember the first allotment  
of this One-Dollar stock goes to early buyers at  
TEN CENTS A SHARE. Then the price will  
begin to advance. Write to-day to

## FREE TO OUR CUSTOMERS.

The "American Manual of Values" which we  
have just published is a work that should be in the  
hands of every one who is interested in speculative  
securities and financial matters in general. The  
volume contains nearly 1,000 pages devoted al-  
most entirely to the active stocks dealt in on the  
principal exchanges of the country and those  
products which are traded in as a speculation,  
such as Wheat, other Grains, and Cotton. It  
shows by means of charts the range of prices for  
all the leading stocks on the New York Stock Ex-  
change each month for the past six years, together  
with full information about the companies pre-  
sented, such as earnings, dividends, etc., etc. Every  
item that could possibly be desired is found ready  
at hand, every question has been anticipated.  
PRICE post-paid in United States and Canada,  
\$7.50.

The cost of compiling this work has been so  
great that it is necessary to restrict the free copies  
to our present customers whose commissions during  
the past year have amounted to \$10 or more.  
Desiring, however, to introduce the work to secure  
more business, we will forward a copy upon receipt  
of \$7.50, agreeing to return this amount provided  
the purchaser becomes a customer and pays us in  
commissions not less than \$10 on or before  
January 1st, 1904. Sample pages sent free on re-  
quest.

## Jasper's Hints to Money-makers

NOTICE—This department is intended for the  
information of the regular readers of LESLIE'S  
WEEKLY. No charge is made for answering ques-  
tions, and all communications are treated confidentially.  
Correspondents should always inclose a  
stamp, as sometimes a personal reply is necessary.  
Inquiries should refer only to matters directly con-  
nected with Wall Street interests. Subscribers to  
LESLIE'S WEEKLY at the home office, at regular  
subscription rates, namely, \$4 per annum, are  
placed on a preferred list, entitling them to the early  
delivery of the papers, and in emergencies, to answers  
by mail or telegraph. Address "Jasper," LESLIE'S  
WEEKLY, 110 Fifth Avenue, New York.

NONE are so blind as those who will not  
see. Experienced, thoughtful, con-  
servative men in Wall Street, and especially  
bankers, who have watched the ups and  
downs of the market, have for a year past  
noted the signs of an approaching financial  
storm. A quarter of a century's experience  
in the world of finance pointed out to me  
very plainly, over a year ago, the indica-  
tions of a culminating boom and a possible  
collapse. My readers have had the benefit  
of honest opinion on the situation, and to  
their credit I must say that very few of  
them, even in the height of the boom, took  
issue with me or questioned my judgment.

The panicky conditions through which  
we have just been passing have revealed the  
inherent weakness of the market, the abso-  
lute necessity of extensive liquidation, and  
of a lower and more natural plane of prices  
for investment as well as for speculative  
securities. It has been a well-guarded  
secret that during the past few trying weeks  
in Wall Street many a quiet settlement of  
the accounts of an over-loaded financier has  
been effected, strong men taking over large  
quantities of securities at figures far below  
the market price. Other things have not  
been so much of a secret. The sale by the  
Pennsylvania Railroad, for instance, of  
\$10,000,000 of 3-1-2 per cent. bonds on a  
4-1-2 per cent. basis to parties abroad, was  
a revelation of the artificial character of the  
prices of even our best investment securities.

We are nearing the close of a year of  
disappointment in the stock market.  
Month after month the boomers of Wall  
Street have been predicting better things  
all along the line. First, the splendid  
outlook for the spring business was the  
bull argument; next, our great crops, and  
then the general advance in prices, suggest-  
ing widespread prosperity. Yet, the mar-  
ket lagged and dragged and suffered blow  
after blow and setback after setback, and,  
as the year closes, we find its life sustained  
only by the most heroic measures on the  
part of the Secretary of the Treasury, whose  
interference in Wall Street has been justified  
only by the fear of a widespread panic.

It is no secret in the inner circles of the  
money market, that the rapid evolution of  
Secretary Shaw's drastic plan of procedure  
was only justified by conservative influ-  
ences in and out of Washington, on the  
ground that, revolutionary as it was, if it  
were not taken, a panic might be precipi-  
tated that would destroy the last hope of  
Republican success at the then pending elec-  
tions. Secretary Shaw, in five weeks, poured  
into the channels of circulation the enor-  
mous sum of nearly \$100,000,000, as fol-  
lows: \$18,000,000 in additional deposits of  
government money in national banks; \$20,-  
500,000 by the purchase of government  
bonds; \$14,000,000 by additions to the  
circulation of national banks; \$40,000,000  
by releasing reserves held by the banks  
against government deposits, and \$3,300,-  
000 by the rebate of interest on government  
bonds. No other Secretary of the Treas-  
ury, even in the trying times of the Civil  
War, ever moved so rapidly and so far as  
Secretary Shaw did in going to the relief  
of the money market.

Even this generous help has failed of its  
purpose, excepting that it has staved off,  
for the time being, the final day of reckon-  
ing. Money is still tightly held by the  
banks; our debit balance abroad is the  
largest ever charged up against us; the  
loans of our banks have increased to fright-  
ful proportions, while the aggregate amount  
of cash held by them shows a decrease, and,  
in New York City, according to the report  
of the clearing house, the total loans of  
the banks are greater than the aggregate  
deposits—a situation almost without paral-  
lel, excepting during the confusion of a  
panic. Meanwhile the drain on our finan-  
cial resources, because of heavy importa-  
tions of foreign merchandise and the pay-  
ment of customs duties into the Treasury,  
continues. The cash in the New York  
banks shows but a slight increase, in spite  
of the generous disbursements of the Treas-  
ury, and is substantially less than a year  
ago.

"B." Albany: Renewal of subscription re-  
ceived.

"C." New Haven: Cannot be regarded as an  
investment.

"L." St. Louis: I hesitate to advise its sacrifice  
just at this time.

"Cincinnati": Four dollars received. You  
are on my preferred list for one year.

"J. H. B." Brooklyn: I do not advise the  
purchase of the Black Diamond shares.

"Spade." Minneapolis: You are on the list  
properly. Duplicate copy has been sent.

"E." Philadelphia: Four dollars received.  
You are on my preferred list for one year.

"Montana": I am inclined to believe that  
Casey is right, although it is impossible to verify  
his figures.

"M." Indianapolis: J. L. McLean & Co. are  
members of the Consolidated Exchange and do  
a large business.

"W." West Superior, Wis.: One dollar re-  
ceived. You are continued on my preferred list  
for three months. Wait for a real slump.

"W." Philadelphia: None of the propo-  
sitions to which you refer has such an invest-  
ment quality as to recommend itself to me.

"Cecil." Baltimore: Two dollars received.  
You are continued on my preferred list for six  
months. (1) Too uncertain yet. (2) No.

"C." New York: While a decided decline in  
the market would no doubt affect everything on  
the list, it seems to me that you are in no danger  
at present, and probably not for some time to  
come.

"M." Amherst, Ill.: (1) I would not be in a  
hurry, though I agree with you. (2) You will  
hardly make a turn in time for Christmas presents,  
unless the money market stringency relaxes un-  
expectedly.

"Uno." Wheeling, W. Va.: I would pay no  
attention to the offer of the McKinley Mining  
Company. There will be stock enough to go  
round. If you speculate in such shares, you  
must run your chances.

"F." Washington: (1) It has had many  
vicissitudes, but is now selling at about its lowest  
price and hence is regarded as a fair speculation.  
(2) Eric common, in case of a decided reaction,  
offers speculative opportunities.

"S. W. M." Boston: (1) With money on the  
street running 8 and 9 per cent., it is not re-  
markable that even investment 4 per cent. shares  
are selling below par. One of the directors of the  
Baltimore and Ohio recently advised me that the  
road was doing unusually well.

"W. R." San Francisco: Four dollars re-  
ceived. You are on my preferred list for one  
year. The safer plan would be to convert your  
old shares into the new Rock Island bonds. On  
the present basis of earnings, the stock is all right,  
but we are bound to have lean years.

"Conservative." Newark: Two dollars re-  
ceived. You are on my preferred list for six  
months. (1) Toledo, St. Louis and Western,  
from present outlook, though conditions may  
change. (2) I do not recognize the stock. Have  
you given the name correctly? (3) No.

"J." New York: (1) The tip to buy Chicago  
Union Traction was freely given out a short  
time ago. It sold last year as low as 12 and as  
high as 20, but is too speculative to recommend  
at present. (2) Unless railroad earnings are  
maintained, Southern Railway common has had  
all the advance it is entitled to at present.

"C." Baraboo, Wis.: Two dollars received.  
You are on my preferred list for six months. (1)  
Coca. Products preferred and Union Bag and Paper  
preferred seem to be the best among your indus-  
trial, for a long pull. (2) What interest will be  
paid on the Wabash Debenture B's remains to be  
seen, but I still have faith in their future.

"Arrow." New York: (1) Keep out of the  
market until it has a decided decline, or until  
money becomes easier. Ontario and Western  
and Norfolk and Western have merit. (2) United  
States Realty and Construction preferred is the  
safest to trade in, but I would not be in a hurry.  
(3) A syndicate, I am told, is endeavoring to make  
a profit out of its control. (4) Leather common  
has not been active of late. It is a cheap indus-  
trial with little intrinsic value, but has speculative  
possibilities.

"F." Toronto: Two dollars received. You are on  
my preferred list for six months. (1) Pacific Coast  
was deliberately advanced, as many believe, in order  
to sell the stock. Its earnings, however, indicated  
that it had merit, though doubt is expressed whether  
it can continue to pay five per cent. dividends. I  
hesitate to advise its sacrifice at present, but it is  
not a stock whose purchase I would recommend for  
investment. (2) I regard Missouri Pacific and  
Union Pacific as safer, but would keep out of the  
market until the liquidation has been more exten-  
sive than it has been at this writing.

"F." Pittsburgh: Four dollars received. You  
are on my preferred list for one year. (1) While  
the weakness in United States Steelstocks was  
what I anticipated and while the outlook for the  
new year in the steel and iron business promises  
to be less satisfactory, it seems as if an effort must  
be made to maintain the price of Steel preferred and  
to continue its dividends for some time to come.  
With easier money it is possible that the moving  
spurts in the market will be able to advance the  
shares. (2) I have endeavored to obtain satis-  
factory information on which to advise, but have  
not thus far succeeded.

"S." Brooklyn: Two dollars received. You  
are on my preferred list for six months. (1) It  
is understood that the Standard interests in South-  
ern Pacific were bought at about fifty dollars a  
share, and around that price therefore many re-  
gard it as a safe purchase. (2) Tennessee Coal  
and Iron ranged last year from \$50 to \$75 a  
share. While I am not favorably disposed to the  
iron and steel stocks, Tennessee Coal and Iron  
seems to be getting down to a more purchasable  
level. I think better of Union Pacific or People's  
Gas. The level they will reach depends upon  
how long the money stringency continues. If  
we do not get over it soon there must be far more  
extensive liquidation and perhaps very serious  
trouble in the mercantile as well as the speculative  
world.

"G. L." Richmond, Va.: (1) If tight money  
continues, many believe that Mr. Morgan will be  
compelled to postpone the flotation of his new  
ship combine securities, which has been promised  
for the early days of the new year. A postpone-  
ment would be significant, under all the circum-  
stances. (2) How seriously depressed the copper  
industry has been is shown by the statement that  
last year five companies outside of the Calumet  
and Hecla paid \$3,000,000 in dividends, while  
this year only two are on the dividend list, beside  
Calumet and Hecla, and they disbursed less than  
a million. Copper stocks, which paid twenty  
dollars a share last year, pay nothing this year.  
Dividends have not been so small since 1895.

## Don't Die of Consumption.

A Positive Cure Found by a Celebrated Michigan Physician—He Sends a Large Trial Package Free by Mail to All Who Write.

At last a cure has been found. Incredible as it may seem, after the centuries of failure, a positive and cer-

DR. D. P. VONKERMAN, the Discoverer of Tubercology—Endorsed by State Officials and Greatest Medical Men of the World as the Only Cure for Consumption.

tain cure for the deadly consumption has at last been discovered. It remained for a great physician of Michigan to find the only known cure for consumption, after almost a life's work spent in experimenting and study.

Consumptives who have returned from the West—come home to die because they thought nothing could be done for them—have tried this new discovery and are now well and strong.

If you are afflicted, do not fail to send at once to Dr. D. P. VonKerman, 1346 Shakespeare Bldg., Kalamazoo, Mich., for a free trial package of this remedy, proofs and testimonials from hundreds of cured patients; it costs nothing. The doctor does not ask any one to take his word or any one else's, as he sends a trial package free, and a few days' use will show you how easily and quickly you can be cured. Delay is dangerous. There is no time to lose when the death hand of consumption is tightening its clutch upon you. Write to-day.

## Free Rupture Cure

If ruptured write to Dr. W. S. Rice, 1406 Main St., Adams, N. Y., and he will send free a trial of his wonderful method. Whether surgical or not get this free method and try the remarkable invention that cures without pain, danger, operation or depletion from work. Write today. Don't wait.

### Washington.

#### HOLIDAY TOUR VIA PENNSYLVANIA RAILROAD.

DECEMBER 29th has been selected as the date for the Personally-Conducted Holiday Tour of the Pennsylvania Railroad to Washington. This tour will cover a period of three days, affording ample time to visit all the principal points of interest at the National Capital, including the Congressional Library and the new Corcoran Art Gallery. Round trip rate, covering railroad transportation for the round trip, hotel accommodations and guides, \$14.50 or \$12.00 from New York, \$13.00 or \$10.50 from Trenton, and \$11.50 or \$9.00 from Philadelphia, according to hotel selected. Rates cover accommodations at hotel for two days. Special side trip to Mount Vernon.

All tickets good for ten days, with special hotel rates after expiration of hotel coupons.

For itineraries and full information apply to Ticket Agents; Tourist Agent, 263 Fifth Avenue, New York; 4 Court Street, Brooklyn; or address George W. Boyd, Assistant General Passenger Agent, Broad Street Station, Philadelphia.

### The Noiseless Nickel Plate.

TRAVEL and education are very nearly synonymous, for who, in these days of great railroads and cheap rates, would claim to be educated unless he or she had traveled some, and broadened their minds with the influences received in other places on this green earth than the spot where they first saw light? The great railroad systems of to-day are doing much if not more than any other one agency to educate mankind, for while the newspaper brings a description of some great meeting, or convention, or catastrophe in a distant city, to your breakfast table, or describes to you the charms of a Yosemite Valley, a Grand Cañon of the Colorado, a Yellowstone National Park, or a Garden of the Gods, how little you really understand and comprehend regarding such things until you have packed your grip, taken advantage of the comforts of modern travel, and seen for yourself.

Of all the great railroads in this country probably none is more favorably known to the traveling public than the Nickel Plate Road. Its track is the straightest and shortest between Buffalo and Chicago; its trains are the finest that run daily on any line, being composed of most modern high-back-seat coaches, Pullman parlor and sleeping cars of most modern and elegant construction, and dining cars of most delightful interior finish, operated under its own management, serving the famous Individual Club meals at 35 cents to \$1, also meals à la carte. It has colored porters, uniformed, to serve passengers in day coaches, regardless of class of ticket held by them, special attention being given to ladies traveling alone or accompanied by children. Its rates are as low or lower than other lines. With this splendid train service and the low rates offered, it has afforded unnumbered thousands an opportunity to gaze for the first time on the grandeur of Niagara Falls; it has carried thousands to the Chautauque Assembly Grounds on Chautauque Lake and to the Wagon Assembly Grounds at Warsaw, Ind., as well as to many other charming resorts on or adjacent to its line. It also carries a large number of the business men, druggists, etc., doing business between the cities on its line. Improvements are being continually made to its track and equipment, to keep it strictly up to date, and any of its agents will be pleased to give full information as to rates, train service, etc., and Mr. R. E. Payne, General Agent, No. 291 Main Street, Buffalo, N. Y., will undoubtedly be glad to answer all inquiries.

### James K. Hackett as an Actor-Manager.

Continued from page 730.

permitted to play the part himself, which was in the eyes of the general public undoubtedly meant for no other actor. Everybody remembers how Mr. Hackett, severing his long connection with a great firm of managers, launched a little battle-ship all his own on the theatrical duck-pond, and everybody remembers how the syndicate lined up against him in a contest for all the world like the "one and the fifty-three" in Tennyson's stirring ballad of the little "Revenge." We laughed at Mr. Hackett's *Don Cesar*. We laughed harder at Mr. Faversham's and wept over Mr. Drew's *Richard Carvel* while the season waxed old and summer came on.

Then there was a long silence. Nobody heard anything about Mr. Hackett until the announcement came that an independent theatrical agency had been organized with Mr. Harrison Grey Fiske, Mr. James K. Hackett, and Mr. Maurice Campbell as the principal managers. Mr. Hackett was to manage himself and one other company headed by Miss Isabel Irving in Churchill's "The Crisis," assume a part of the management of affairs of the independent agency, and make his own productions. We didn't believe he could do it. Of course not. We never believe anything good of anybody until we are forced to, but we believe in him now, and the public sees reason to congratulate itself upon the creation of this potent opposition to a trust which, if left entirely alone, might cease, like other trusts, to consider the general welfare. Mr. Hackett's success this year is doubtless due somewhat to the fact that he procured for once a playable dramatization of a popular novel. "The Crisis," as presented by him and an excellent supporting company at Wallack's, is one of the most enjoyable performances to be seen in New York this season. There is not much chance in the play for elaborate setting nor for the display of any great dramatic ability. In fact, Mr. Hackett himself appears so seldom as to disappoint his admirers, but through a series of pretty situations and charming scenes runs an "atmosphere" that is conspicuous for its absence in most plays, and one leaves the theatre with a feeling of quiet satisfaction not to be shaken off immediately.

Mr. Hackett has been "raised" on dramatizations of popular novels, and it is a matter of regret that somebody does not fit to his personality a character of real dramatic strength, a character into which he could breathe lasting life. The question of the dramatization of popular novels has been discussed pro and con for years, but it seems to me, considered from an artistic standpoint merely, that the actor who attempts to personate a character already possessing life and personality to the public suffers greater loss than he can easily repair. "Not a bit like it" is usually the verdict after very little consideration of the excellence of the production or the actor's efforts to meet the requirements of the rôle, but Mr. Hackett, being blessed by a kind fortune with an unusual amount of personal attractiveness of the novel hero sort, seems to have been chosen for a model by Mr. Churchill when he created both *Richard Carvel* and *Stephen Brice*, and the same thing might be said in regard to the handsome hero of Anthony Hope's romantic novels and of "The Pride of Jennico."

One doesn't wonder, considering his manifold responsibilities, that Mr. Hackett is thankful for the small part he plays in "The Crisis." He calls it his "rest cure," and it is really true that the intervals between his scenes in the play are about the only moments he gets for relaxation during the day. En tour Mr. Hackett carries his secretary and office with him. He has a curiously constructed trunk, a photograph of which we publish, which is nothing less than a roll-top, desk folded up. This he has set up in his room in every town he visits, and he is thus enabled to carry on his business affairs without so much trouble or interruption, and to carry the paraphernalia of a business office in a safe, compact manner.

## To Those Interested in Pianos

A piano investment is not an investment of a day, month or year. The money paid for a piano should represent the enjoyment of more than one century of ownership. THE KNABE costs more in the first instance than most pianos, but IN THE LONG RUN it proves to be not alone the most satisfactory instrument, but the least expensive compared with any piano. We will be glad to tell you why.

**A Market for Machinery.**

DOWN IN New Zealand, the happy "land without strikes," and a prosperous and progressive country, is a good field for the exploitation of all grades of machinery, and especially for kinds used in wood-working, agriculture, and fruit handling. A firm of merchants at Wellington, New Zealand, the Messrs. G. H. Grapes & Co., write that they would like to be placed in touch "with manufacturers of wood-working machinery for fruit cases and boxes for packing glass, especially those making a suitable description of reciprocating three-bladed gang-saw machines; also with makers of the apparatus necessary for the equipment of a small fruit-preserving plant (suitable for turning out 1,000 to 10,000 two-pound glass jars of jam per diem) and for jelly-making and fruit bottling; also with makers of first-class fruit-grading machinery on the automatic principle—the above to be worked by a twelve-horse-power engine."

### Special Prizes for Amateur Photographs.

LESLIE'S WEEKLY was the first publication in the United States to offer prizes for the best work of amateur photographers. We offer a prize of five dollars for the best amateur photograph received by us in each weekly contest, the competition to be based on the originality of the subject and the perfection of the photograph. Preference will be given to unique and original work and for that which bears a special relation to news events. We invite all amateurs to enter this contest. Photographs may be mounted or unmounted, and will be returned if stamps are sent for this purpose with a request for their return. All photographs entered in the contest and not prize-winners will be subject to our use unless otherwise directed, and one dollar will be paid for each photograph we may use. No copyrighted photographs will be received, nor such as have been published or offered elsewhere. Many photographs are received, and those accepted will be utilized as soon as possible. Contestants should be patient. No writing except the name and address of the sender should appear on the back of the photograph except when letter postage is paid, and in every instance care must be taken to use the proper amount of postage. Photographs must be entered by the makers. Silver paper with a glossy finish should be used when possible. Mat-surface paper is not suitable for reproduction. Photographs entered are not always used. They are subject to return if they are ultimately found unavailable in making up the photographic contest. Preference is always given to pictures of recent current events of importance, for the news feature is one of the chief elements in selecting the prize-winners. The contest is open to all readers of LESLIE'S WEEKLY, whether subscribers or not.

N. B.—Communications should be specifically addressed to "Leslie's Weekly, 110 Fifth Avenue, New York." When the address is not fully given, communications sometimes go to "Leslie's Magazine," or other publications having no connection with LESLIE'S WEEKLY.

**TO AMBITIOUS PERSONS.**

A prominent business man of New York City writes that he would like to come in touch immediately with a few well-recommended people who desire a higher education. This gentleman (whose name is withheld, at his request) has at his disposal a limited number of Free Tuition Contracts in a well-known educational institution for home study.

This school can teach you to become an *Illustrator, Correspondent, Advertiser, Journalist, Proof-reader, Bookkeeper, Stenographer, Practical Electrician, Electrical Engineer, Electric Railway Engineer or Telegraph Engineer.*

If you are awarded one of these Free Tuition Contracts, the only expense to you while you are studying will be the cost of instruction papers, postage, etc.; this you can pay during the first four months.

If you are ambitious to improve your station in life, we should strongly recommend that you write to this gentleman at once. Address W. L. B. P. O. Box 53, Madison Square, New York City. Be sure to mention LESLIE'S WEEKLY.

## Tell Me Who Needs Help

### No Money Is Wanted.

To aid a sick friend, will you tell me the book he needs? Will you simply write a postal card, if I will do this?

I will mail the sick one an order—good at any drug store—for six bottles Dr. Shoop's Restorative. He may take it a month at my risk. If it succeeds, the cost is \$5.50. If it fails, I will pay the druggist myself.

That month will show if the remedy can cure. If the sick one is then disappointed, the test shall not cost him a penny.

I have furnished my Restorative to hundreds of thousands in that way, and 39 out of each 40 got well, and have paid for it.

It is a remarkable remedy that can stand a test like that, and I have spent a lifetime on it. It is the only remedy that strengthens the inside nerves—those nerves which alone operate the vital organs. There is positively no other way to make weak organs well.

My book will convince you. You will not wonder then why this offer is possible.

Simply state which book you want, and address Dr. Shoop, Box 940, Racine, Wis.

Book No. 1 on Dyspepsia.  
Book No. 2 on the Heart.  
Book No. 3 on the Kidneys.  
Book No. 4 for Women.  
Book No. 5 for Men (sealed).  
Book No. 6 on Rheumatism.

Mild cases, not chronic, are often cured by one or two bottles. At all druggists.

## Outdoor Sports California

May be indulged in the year round—golf, tennis, automobile-billing, sailing, kodaking, fishing. No cold weather.

Take the luxurious **California Limited**, Chicago to Los Angeles and San Francisco. You will enjoy the dining car service.

Why freeze at home?

The California tour described in our books; mailed for 10c in stamps. Address General Passenger Office, Atchison, Topeka & Santa Fe Railway, Chicago.

# Pears'

is not only the best soap for toilet and bath but also for shaving. Pears was the inventor of shaving-stick soap.

Established over 100 years

## BRASS BAND

Instruments, Drums, Uniforms, Lyons & Healy's "Jazz" Music Instruments are now used by the greatest artists. Fine Catalogue, 400 illustrations, mailed free; it gives Band Music & Instructions for Amateur Bands. Bargains in Instruments just reduced in price. LYONS & HEALY, 98 Adams St., Chicago. The World's Largest Music House. "Everything known to Music."

"Mother, where are the little red spots you had on your face?"  
"Gone, my darling. Sulphume and Sulphume Soap have taken them all away."

## THE REASON WHY! SULPHUME

is a chemical solution of Pure Sulphur, and when taken internally and applied as a lotion will cure dandruff or any skin disease; it is also a great hair invigorator. Price \$1.

### SULPHUME SOAP

stops itching and all skin irritations, softens and whitens the skin, and has no equal for the toilet or bath. Prices: Perfumed Soap, 25c a cake; Unperfumed, 15c a cake. Will mail trial cake upon receipt of price.

### SULPHUME SHAVING SOAP

is the perfection of soaps for shaving. It is a perfect antiseptic, prevents rash breaking out, cures and prevents all contagious skin diseases, gives a creamy lather and is soothing to the skin.

### SULPHUME LITTLE LIVER PILLS

act directly on the liver, kidneys and bowels, but do not gripe or nauseate. Price, 25c.

### SULPHUME BOOK

on care of the skin free.

*M.A. Day* Be sure this signature is on each package of Sulphume Preparations, otherwise it is not genuine.

Your druggist can procure Sulphume Preparations from his jobber, without extra charge to you.

## Life-insurance Suggestions.

[NOTICE.—This department is intended for the information of readers of *Leslie's Weekly*. No charge is made for answers to inquiries regarding life-insurance matters, and communications are treated confidentially. A stamp should always be inclosed, as a personal reply is sometimes deemed advisable. Address "Hermit," *Leslie's Weekly*, 110 Fifth Avenue, New York.]

THERE IS a world of common sense in the old adage, "Hitch your chariot to a star." A successful merchant in New York once told me that he made it a rule never to employ men who had failed, unless under very exceptional circumstances. His preference was for young men who had succeeded. The world is full of failures, while conspicuous successes are few. Those who succeed do so largely because they profit by the experience of others, which is less expensive than paying for their own. I make these observations, in connection with the subject of life insurance, to call attention to the fact that five Boston men are said to carry a total of over \$2,000,000 of life insurance, in amounts ranging from \$100,000 to \$1,000,000. Every one of these gentlemen has taken out his policies in the strongest old-line companies he could find. Not one of them has any connection with a fraternal, benevolent insurance order of any kind, and yet we are told that the fraternal orders offer cheaper insurance than the old-line companies and policies that are quite as safe. Does any one believe that the wealthy men of this country, who are quick to scent bargains, would entirely ignore this cheap insurance if it were safe, and would pay the higher rates demanded by the old-line companies? The reason they pay higher rates is because they seek, first of all, security. That is the part of wisdom. No man can afford to speculate in life insurance. That ought to be business of the rock-bottom, hard-pan kind.

"Old Lady," New York: I suggest the purchase of an annuity. Only see that you get it in a safe and reliable concern.

"M." Rutland: The Connecticut General is not one of the largest companies, nor one of the oldest. It makes a fairly good statement.

"H." Chicago: It seems to me that the claims made for the Franklin bonds are extravagant. I like a good many other things better.

"R." Triumph, O.: (1) Of the companies you mention, the Mutual Life is the largest and will give you the most satisfactory results in the end. (2) A twenty-year endowment.

"G." Easton, Penn.: (1) I do not regard it highly and prefer an older and stronger company. (2) Your inquiry regarding stocks should be addressed to the financial department, in charge of "Jasper."

"G. H." Niles, O.: The company, under the terms of its agreement, apparently can do about as it pleases in the matter. I do not see that you have any recourse, excepting in law, and that might be expensive and unproductive.

"A." Omaha: It looks very much as if the Mutual Reserve had the better of the bargain with you. Its ability to increase the premium puts you in a position where the policy can be made quite expensive. How much you would receive on the final distribution is largely conjectural. If you are insurable elsewhere, why not get something you know all about and which will not cause needless worry?

## The Hermit.

### Business Chances Abroad.

DEALERS IN agricultural implements of all classes and grades will do well to keep a vigilant eye on France, where there is at present a great demand for this class of manufactured articles, and especially those of American make. Many agricultural machines considered quite indispensable in America, such as threshing machines and steam or horse-power hay presses, are quite unknown in France, and there would undoubtedly be a good market for these labor-saving devices if the right means were used to acquaint French farmers with their uses and advantages. Speaking of these things our consul at Marseilles, Mr. Skinner, says that he is convinced that our manufacturers as a body have left the field to a mere handful of their number, and that this handful, by generally omitting to establish their own agencies for the sale and distribution of their goods, are neither selling as much as they might nor acquiring the identity among the consumers that they should. Mr. Skinner says also that large creameries are seldom encountered in France, but the individual farmer is rapidly learning that the old-fashioned methods of making butter will not do, and is buying low-priced forms of modern machines. A good many of the types are imported, but comparatively few are from the United States.

Your grandmother used "Piso's Cure." It is still the best remedy for coughs and colds.

By the sea and waves drink a bottle of delicious Champagne. *Cool's Imperial Extra Dry*. It is the very best.

**Advice to Mothers:** Mrs. Watson's Soothing Syrup should always be used for children teething. It soothes the child, softens the gums, allays all pain, cures wind colic, and is the best remedy for diarrhea.

Schmied & Co., the great Piano-makers, furnish every variety of instruments—square, upright, and grand—and are constantly striving to meet every demand. Their success has been phenomenal.

Can anyone suppose that we would double the necessary cost of our brewing without a vital reason.

Would we spend so much on cleanliness? Would we cool the beer in plate glass rooms? Would we filter all the air that touches it? Would we age it for months in refrigerating rooms? Would we filter it? Would we sterilize every bottle after it is sealed?

Can anyone suppose that it is our good—rather than your good—that we serve by it?

# Schlitz

We do it to attain absolute purity—to avoid the remotest possibility of germs—to make Schlitz Beer healthful—to escape the cause of biliousness; the lack of age and proper fermentation.

Why accept a common beer—brewed without any of these precautions—when Schlitz Beer costs no more?

Your dealer may prefer to furnish a beer that pays a little more profit; but does it pay you to permit it? Isn't pure beer—Schlitz Beer—worth asking for? Ask for the Brewery Bottling.

## Lovely Complexion FREE.

A Total Free Mailed FREE which will give you a lovely complexion. It is not a face powder, cream, cosmetic or bleach, but is absolutely pure and you can use it privately at home. It permanently removes moth patches, redness, crows feet, wrinkles, black heads, blemishes, yellowness, freckles, tan, sunburn, and all complexion disturbances. Address: MADAME M. KIBAU, 4853 Elm Bldg., Cincinnati, O.

## Free to Dyspeptics.

If you suffer from Distress, Bloating, Heartburn, Sour Stomach, or Water-brash, you can find relief, and what is better, in most cases—cure, by using "Glycozone." This scientific germicide, which is absolutely harmless, stops fermentation of food in stomach and allays inflammation of mucous membrane. To demonstrate its wonderful efficiency, if you mention this publication, I will send you, on receipt of 20 cents (which covers postage) a liberal sample of Glycozone that will prove its merit. Prof. Charles Marchand, 60 Prince St., N. Y.
